1986	NLSY79: Round 1 Child (all biological children of interviewed mothers)																															

\*There are 3 children in CDS who were born in 1983, according to the PSID birth year variable, but not shown in the table above.

\*\*Frequencies in the Add Health Codebook for Wave 1 in home adolescent interview show a small percentage of respondents born in 1974 and 1975 (<2%), and in 1983 (<1/2%).

<p><b>Information Source</b></p> <p><a href="http://psidonline.isr.umich.edu/CDS/wavesdoc.html">http://psidonline.isr.umich.edu/CDS/wavesdoc.html</a>      <a href="http://www.nlsinfo.org/web-investigator/docs.php">http://www.nlsinfo.org/web-investigator/docs.php</a>      <a href="http://www.bls.gov/nls/97guide/nls97usg.htm">http://www.bls.gov/nls/97guide/nls97usg.htm</a>      <a href="http://www.cpc.unc.edu/projects/addhealth">http://www.cpc.unc.edu/projects/addhealth</a></p>			
<p><b>General Purpose</b></p> <p>To provide researchers with a comprehensive, nationally representative, and longitudinal database of children and their families with which to study the dynamic process of early human capital formation.</p> <p>To examine the linkages between maternal- family behaviors and attitudes and subsequent child development; to follow the Children of NLSY79 mothers as they transition to adulthood.</p> <p>To identify characteristics defining the transition that today's youths make from school to the labor market and into adulthood.</p> <p>To examine (a) the ways in which social contexts (families, friends, schools, neighborhoods, and communities) influence adolescents' health and risk behaviors and (b) to explore the causes of health-related behaviors of adolescents in grades 7 through 12 and their outcomes in young adulthood.</p>			
<p><b>Sample Design</b></p> <ul style="list-style-type: none"> <li>▪ Sampled all PSID families with children aged 0-12 years during the calendar year of 1997. PSID is a nationally representative sample of families in the U.S. with an oversample of low-income families. Sample members are followed as they split off into new households.</li> <li>▪ Selected up to 2 children per family. Families typically included biological mother (94% of CDS-I and 89% of CDS-II) but also include other "non-traditional" family configurations.</li> <li>▪ Siblings, cousins</li> <li>▪ Interviewed these children in 1997, 2002-2003, 2005 (TA), and planned (per funding decision) 2007 CDS and TA</li> <li>▪ Sample size: in 2002-2003, 2,907 children interviewed (83 children from Wave 1 were non-sample PSID individuals and were dropped from the CDS panel)</li> </ul> <ul style="list-style-type: none"> <li>▪ In 1986, sampled all biological children born to NLSY79 women. The NLSY79 sample, selected in 1978, was a national probability sample of men and women born in the U.S. between 1957 and 1964 (aged 15-22 in 1979).</li> <li>▪ NLSY over-sampled African-American and Hispanic youth. The oversample of economically disadvantaged white was dropped in 1991 and the oversample of military was dropped in 1985 prior to the interview with children.</li> <li>▪ Siblings, cousins</li> <li>▪ Followed children biennially since 1986 in either NLSY Child interview (9 waves) or NLSY Young Adult interview (5 waves as of 2002). Enroll new births each round; two birth year cohorts move to YA sample each wave. Continuing.</li> <li>▪ Children must reside w/ the NLSY79 mother to be eligible for interview; young adults (15+ years) are eligible regardless of residential status.</li> <li>▪ Sample sizes: by 2002, 3,392 children and 4,238 youth interviewed.</li> </ul> <ul style="list-style-type: none"> <li>▪ Cross sectional sample of individuals with an additional oversample of Blacks and Hispanics who were living in the U.S. in 1997 and who were born during the years 1980-1984 (aged 12-16 years by December 31, 1996).</li> <li>▪ Siblings</li> <li>▪ Annual interviews since 1997. Continuing</li> </ul> <p>Sample size: by 2002, 7,883 youth interviewed (attempt to interview all 8984 respondents from round 1 at each interview)</p> <ul style="list-style-type: none"> <li>▪ School-based design – private, public, and parochial schools. Enrolled adolescents in grades 7–12 during the 1994–1995 school year</li> <li>▪ Oversample of Hispanics and Asians</li> <li>▪ Siblings</li> <li>▪ Followed these adolescents/young adults in 1994, 1996, 2001, and planned for 2007</li> <li>▪ Sample size: by 2002, 15,170 youth interviewed</li> </ul>

<b>Detail: Peer Networks</b>			
NA	NA	NA	<p>From website: Data on peer networks is a unique strength for Add Health Study. Through the “In-School Interview”, friendship networks were identified for maximum of five male and five female friends of each respondent. Information is available about the strength of friendship ties, patterns of association within the school, and density and centralization of the social network within the school context.</p> <p>Through the “In-home Interview”, data were collected from respondents on best friends, romantic partners, and sexual partners. Data were collected from young adults and a sample of 1,507 partners in Wave III – one-third married, one-third cohabiting, and one-third dating partners, representing a wide spectrum of relationship intimacy and commitment.</p>
