

FIVE-YEAR FAMILY TAPE CODE

The following are the codes for all the family units. The variable numbers and tape locations appearing first pertain to the single-year family tapes. Those numbers in parentheses refer to the merged family data. (The order of these numbers is reversed for the 1969 variables.) The weighted distributions are based on the single-year tapes. Since not all the families interviewed in each of the first four years were reinterviewed in 1972 and some families split up, the distribution for the five-year merged tape may differ slightly.

TAPE CODE FOR 1968 VARIABLES

Worksheet 1 (Housing, Cars, and Payments)

Variable Number	Tape Location	Description and Details
1	1-3	Study number (768)
2	4-8	Sequence number (The last digit of this number is zero for all but 35 cases which were coded 1. These cases are related secondaries about to leave home, who were interviewed separately. Most data tapes omit the 35, so the last digit of this number will be = 0)
3	9-12	Family number (The first four digits of the sequence number, and kept as the link with later reinterviews, i.e., coded each year for any member of this family who is reinterviewed. Families in cross-section sample have numbers less than 3000. Those in supplementary low income sample have number 5000 or above)
4	13	Sub-family number (The last digit of the sequence number. This will be 0 except for 35 related secondaries who will be eliminated from most data tapes)
5	14-18	House value 00000 Inap., not a home owner 99999 \$99,999 or more (There are no missing data; they were assigned values)
6	19-22	Property taxes (Estimated from house value using data from previous surveys) and region, and central city or suburbs. Rate of taxation on house value was assigned on the basis of data from previous surveys. The assigned tax rates are shown in the table below

For half the Census sample, in half the PSU'S, respondents were given a set of four pictures and fourteen words were read, asking the respondent to indicate which was the best picture for that word. The words and pictures came from the Ammons Quick. Test,* but the procedure was so altered that the result should not be considered an application of that test. Actually, as graded in tests on school children, we took every third word up through age 12, so that many people would be expected to get them all right, and only the bottom fringe would be distinguished. (This reduces the amount of failure experience and field difficulties,

we feel.) The simplest words were names of objects actually in one picture, and as the words get more difficult, their connection to a picture also becomes more indirect.

399 677-680 Ratio of Family Money Income to Family Money
Needs: SSA Economy Level (70% Farm Family
Cutoffs)

xx.xx This Social Security Administration definition is based on the economy level food budget, which was the same definition that was applied to the 1967 CPS data. The cutoffs are unaltered even to take account of price changes. Economies of scale are related to family size, although the definition assumes that the marginal cost for additional family members beyond 7 is zero. Incorporated in the definition are adjustments for the sex of the head and the ages of family members. For farm families, those whose heads indicate that farming is their first or second job, the cutoff is .7 x nonfarm values

400 681-684 Ratio of Family Money Income to Family Money
Needs: SSA Economy Level (80% Farm Family
Cutoffs)

xx.xx This variable is identical to V399 except that the cutoff for farm families is .8 x non-farm values

401 685-688 Ratio of Family Money Income to Family Money
Needs: SSA Low-Cost Level (70% Farm Family
Cutoffs)

xx.xx This definition is identical in structure to V399, but allows a higher money need per person. In contrast to the economy-level definitions (V399 - 400), the cutoffs here have been adjusted upward from the 1967 level to reflect price changes. The cutoff for farm families is .7 x nonfarm values

402 689-692 Ratio of Family Money Income to Family Money

Cutoffs)

xx.xx

403 693-696 Ratio of Family Money Income to Family Money
Needs Modified SSA Economy Level (70% Farm
Family Cutoffs)

xx.xx This definition differs in two ways from V399.
First, it rests on a 1965 food expenditures survey
and, second, it assumes that the marginal cost
of additional family members becomes zero after
the 11th member, rather than the 7th. There are
a larger number of poor when this definition is
used because the extension of the range in which
family members have a positive marginal cost,
and because of the higher cutoffs resulting
from the 1965 food expenditure survey, which
showed the ratio of food expenditure to total
needs to be less than 1/3, the ratio developed
from the 1955 survey

405 701-704 Ratio of Family Money Income to Family Money

way that the modified SSA economy-level
definition differs from V399

Weight

All analysis on the entire sample using 1968 data only should be based on data weighted by this variable to reduce the biases from differential sampling and response rates

However, it is possible to use the SRC cross-section sample only, without weights, since the response rates did not vary so much as to produce substantial biases

Cross-section sample is identified by values of V3 (Family number) less than 3000
