70 156-160 Weekly Food Needs
 (2470) (4656-4660) -----
 Based on USDA Low Cost plan estimates of
 weekly food costs, according to the table
 below (reproduced from Family Economics Review,
 March, 1967), summed for the family

INDIVIDUAL FOOD STANDARD (LOW COST)

Age	Male	Female
Under 4	3.90	3.90
4 - 6	4.60	4.60
7 - 9	5.50	5.50
10 - 12	6.40	6.30
13 - 15	7.40	6.90
16 - 20	8.70	7.20
21 - 35	7.50	6.50
36 - 55	6.90	6.30
56 and older	6.30	5.40

(This same standard has been used in Waves I,
 II, III and IV. Adjustments for inflation,
 etc., are left to users)

71 161-165 Annual Need Standard in 1971
 (2471) (4661-4665) -----

This is the Orshansky-type poverty threshold,
 based on an annual food needs standard derived
 from the weekly food costs above, which is
 converted to an annual amount and adjusted
 for economies of scale by USDA rules as
 follows:

- Single person - add 20%
- Two persons - add 10%

Three persons - add 5%
 Four persons - no change
 Five persons - deduct 5%
 Six or more persons - deduct 10%

An additional adjustment for diseconomies of small households (in rent, etc.) was made as follows for the Annual Need Standard:

4.89 times the food needs for single persons
 3.7 times the food needs for two-person units
 3.0 times the food needs for all other units

(5840: 16 hours/day x 365 days) minus
average nonleisure of Head and Wife (total
nonleisure if unmarried Head)

$$V450 = 5840 - (V537/V67)$$

This variable is not comparable to the 1967
variable since nonleisure in 1970, 1969 and
1968 includes travel to work time of Head
and Wife while in 1967 it did not

Annual food standard

This variable is generated by multiplying the
weekly food needs (V70) by 52 and then making
the following adjustments for economies of
scale: add 20 percent for one person
families, 10 percent for 2 person families, 5
percent for 3 person families and subtract 5
percent for 5 person families and 10 percent
for families with six or more

housing [V490]/family food standard [V492])

xx.xx Ratio of 1971 family net real income net
 of cost of housing to 1971 family food
 need standard

It is postulated that housing is a lumpy
expenditure which is not proportional to
family size. Income remaining after this
expense may be considered to be applicable to
expenses which are more nearly proportional
to family size. The family food standard does
not incorporate some of the economies of
scale which the family need standard does,
and is thus the appropriate reference
standard for this income measure. However,
the food standard is lower than the need
standard by roughly a factor of 3, so
variable 4 will have substantially greater
numerical value than the other income 4 needs
variables
