

A PANEL STUDY OF INCOME DYNAMICS:  
PROCEDURES AND TAPE CODES

1979 INTERVIEWING YEAR

WAVE XII

A SUPPLEMENT

Conducted under Contract with the Office of  
the Assistant Secretary for Planning and  
Evaluation, Department of Health, Education and Welfare

Survey Research Center

INSTITUTE FOR SOCIAL RESEARCH  
THE UNIVERSITY OF MICHIGAN  
ANN ARBOR, MICHIGAN

1980

Preface

Volumes I and II of A Panel Study of Income Dynamics contain tape codes, indexes, available data, questionnaires and procedures specific to our first five years of data collection (1968-1972). These volumes also describe the early history of the study and some of the basic procedures that are common to all twelve years of interviewing. Seven supplemental volumes, including this one, cover procedures, codes and questionnaires for Waves VI-XII.

We have now published seven volumes of analysis in the series called Five Thousand American Families--Patterns of Economic Progress. (Because members of original panel families are added to the sample when they move away from home, there are now 6373 families in the study.) Volume VIII, which will appear in spring 1980, will include chapters on information and influence networks in labor markets, persistence in unemployment among adult men, determinants of expected and actual retirement, authority at work, effects of community and family on subsequent achievement, analysis of life events, sex differences in measurement error in status attainment, disability, Reverse Annuity Mortgages, utility costs, gasoline expenditures, and a summary of research carried out elsewhere using PSID data. We would welcome contributions to include in this summary in 1981.

Preparations are under way for our thirteenth wave of interviewing with funding provided by the Department of Health and Human Services (HEW) and the National Science Foundation.

Staff

Greg J. Duncan and James N. Morgan are the study's principal researchers. Others responsible include Joan Brinser, C. Gaye Burpee, Richard D. Coe, Mary Corcoran, Linda Datcher, Anita Ernst, Peggy Gunnesch, Priscilla Hildebrandt, Dan H. Hill, Martha S. Hill, Peggy Hoad, Tecla Loup, Michael A. Nolte, Anne Sears and Charles Stallman. To our regret Paula Pelletier and her husband have moved to the State University of New York at Stonybrook.

## TABLE OF CONTENTS

|  |     |
|--|-----|
| Preface . . . . .  | iii |
| Section I: Procedures for the 1979 Interviewing Year . . . . .   | 1   |
| Part 1: New Questions, Interviewing Procedures, 1979 Occupation Codes, Independent Part Samples, Weights, Data Quality . . . . . | 1   |
| Part 2: 1979 Questionnaire . . . . .   | 8   |
| Part 3: Editing Procedures and Worksheets . . . . .  | 9   |
| Part 4: Coding Procedures . . . . .  | 12  |
| Part 5: Generated Variables and Additional Data . . . . .  | 15  |
| Part 6: Data Available . . . . .   | 17  |
| Part 7: Notes on Use of Data . . . . .   | 18  |
| Part 8: Twelve-Year Family-Individual Hierarchical Database . . . . .  | 21  |
| Section II: Tape Codes for Wave XII . . . . .  | 27  |
| Part 1: Twelfth-Year Family Tape Code . . . . .  | 27  |
| Section III: Indexes (Part 1-Part 3 [Alphabetical and Numerical Indexes] are not included) . . . . .                             | 211 |
| Part 4: Index of the 1979 Employment Sections . . . . .  | 212 |

SECTION I

PROCEDURES FOR THE 1979 INTERVIEWING YEAR

Part 1: New Questions, Interviewing Procedures, 1979 Occupation Codes,  
Independent Part Samples, Weights, Data Quality

New Questions

The employment section for wives was expanded in the 1979 questionnaire to include many of the employment questions asked of household heads. The principal difference was that heads answered the questions for their wives as well as for themselves. The series of questions about the jobs and earnings of family members over 15 years old, other than head and wife, was also expanded and combined with old and new questions about education. These extra earners are mostly children of the head and the new combination of questions made it easier to sort out who were in school full time, worked full time, combined a job with education, or neither worked nor went to school. Questions were revived from several years ago asking respondents if they did any work themselves on their cars or on their

houses and, if so, what kind of work they did, how much time it took them, and how much money it saved them. We also asked if respondents saved money raising, freezing, or canning their own food. Finally, there were a few new questions about the impact of inflation on day to day living and on retirement plans.

Interviewing was moderately peaceful. The interviewers' jobs were simplified by a member of the study staff who was always available by telephone to help solve problems and provide information and advice. Interviewers in the field did most of the telephone interviewing, backed up very ably by the Ann Arbor telephone interviewers who were extremely skillful at getting difficult interviews. We had to write more persuasion letters than usual but better than 60 percent of them worked. Average time for the interview was 28 minutes.

The lag between the interview and the payment was reduced this year by issuing checks to respondents as soon as their interviews were logged in instead of waiting until they were processed. This comforted respondents who tend to worry that their money has been lost in the mail. In 1980 we plan to pay \$9.00 for the interview instead of the usual \$7.50 and hope thereafter to raise the price a little each year. We will continue to pay \$5.00 for returning the address correction postcard.

We took 6373 interviews out of 6585 for an overall response rate of 96.8 percent. If recombined families and people who had died or were too ill to talk to us are subtracted from the base, the response rate rises to 97.5 percent. We interviewed 373 new splitoff families (86.5 percent of a possible 431) and we were able to interview 98.2 percent of the 1978 respondents who were still alive and well enough to talk to us. The study now has respondents in 725 counties, 18 independent cities (these are units of government that in some cases have replaced counties), all the states except Montana, The District of Columbia, and 11 foreign countries.

2

#### Occupation Codes

We used the Survey Research Center's two digit occupation code in the 1979 employment sections for heads and wives. However, in order to be comparable to past interviews, the one digit code continued to be used in the New Head Section for the head's first job and the head's father's occupation.

#### Data Quality

In 1979 a few more interviews were taken by telephone than in 1978 (Table 2), and there was a slight decrease in the number of interviews taken with the head of the family (Table 3). A few more people than usual refused to give us financial information (see the number of assignments in Table 4). This reticence may have been suggested by the following statement which (as of 1979) begins the interview: "This interview is completely voluntary and confidential--in addition if we should come to any question which you don't want to answer, just let me know and we'll go on to the next question." The response rate remains unchanged at 97 percent (Table 1).

Table 1  
ANNUAL AND CUMULATIVE PANEL RESPONSE RATES\*

| Year | Percent |            |
|------|---------|------------|
|      | Annual  | Cumulative |
| 1968 | 76      | 76         |
| 1969 | 89      | 68         |
| 1970 | 97      | 66         |
| 1971 | 97      | 64         |
| 1972 | 97      | 62         |
| 1973 | 97      | 61         |
| 1974 | 97      | 59         |
| 1975 | 97      | 57         |
| 1976 | 96      | 55         |
| 1977 | 97      | 53         |
| 1978 | 97      | 51         |
| 1979 | 97      | 49         |

\*The deceased, those too ill to be interviewed, and recombined families have not been removed from the base.

Table 2  
PROPORTION OF INTERVIEWS BY TELEPHONE

| Year | Sample Size | Number of<br>Telephone<br>Interviews | Unweighted<br>Percent of<br>Sample |
|------|-------------|--------------------------------------|------------------------------------|
| 1968 | 4,802       | --                                   | --                                 |
| 1969 | 4,460       | --                                   | --                                 |
| 1970 | 4,655       | 67                                   | 1.4                                |
| 1971 | 4,840       | 108                                  | 2.2                                |
| 1972 | 5,060       | 134                                  | 2.6                                |
| 1973 | 5,185       | 4,047                                | 76.6                               |
| 1974 | 5,517       | 4,554                                | 82.5                               |
| 1975 | 5,725       | 4,836                                | 84.5                               |
| 1976 | 5,862       | 5,360                                | 91.4                               |
| 1977 | 6,007       | 5,040                                | 83.9                               |
| 1978 | 6,154       | 5,283                                | 85.8                               |
| 1979 | 6,373       | 5,635                                | 88.4                               |

Table 4\*

TOTAL ACCURACY CODES ON HUSBAND AND WIFE INCOME VARIABLES

| Year of Data | 0    | 1   | 2   | 3   | 4 or More | Total |
|--------------|------|-----|-----|-----|-----------|-------|
| 1968         | 94.0 | 2.5 | 2.6 | 0.2 | 0.8       | 100.0 |
| 1969         | 95.6 | 1.6 | 1.9 | 0.1 | 0.8       | 100.0 |
| 1970         | 96.9 | 1.3 | 1.3 | 0.1 | 0.5       | 100.0 |
| 1971         | 97.7 | 0.9 | 0.9 | 0.1 | 0.4       | 100.0 |
| 1972         | 97.8 | 0.8 | 1.1 | 0.0 | 0.3       | 100.0 |
| 1973         | 97.9 | 1.1 | 0.7 | 0.1 | 0.2       | 100.0 |
| 1974         | 98.2 | 0.9 | 0.7 | 0.0 | 0.2       | 100.0 |
| 1975         | 98.3 | 0.8 | 0.8 | 0.0 | 0.2       | 100.0 |
| 1976         | 97.0 | 1.2 | 1.6 | 0.1 | 0.2       | 100.0 |
| 1977         | 97.4 | 1.1 | 1.2 | 0.0 | 0.3       | 100.0 |
| 1978         | 97.4 | 0.7 | 1.3 | 0.1 | 0.5       | 100.0 |

\*Table 4 is based on four variables:

Accuracy of Head's Labor Income (V6392 + V6397)

Accuracy of Wife's Labor Income (V6399)

Accuracy of Asset Income of Head and Wife (V6407)

Accuracy here is determined by the number of assignments made by the editors in order to recreate data missing from an interview. The more assignments, the less reliable the data. The accuracy code values and their meanings are:

0. Adequate response: No assignments made.
1. Minor assignment: Response was inadequate, but estimates could be made within a probable error of under \$300 or 10 percent of the assignment by using previous years' data or other data in the interview.
2. Major assignment: Response was inadequate, and estimates had a probable error of at least \$300 and at least 10 percent of the value of the assignment, using any information available in previous interviews or in the current one. Usually these values were assigned from an assignment table.

7

This table shows the sum of the accuracy codes for the three different income measures. The maximum number possible here would be eight for married couples, six for single heads.

### Independent Part Samples

The use of part samples is suggested for separating the selection of a preferred model from the assessment of its stability and power. Simple random subsamples are not independent of the rest of the sample because of the clustered nature of area probability samples. Therefore, four independent quarter-samples are designated in the code (V6803). How much of the sample should be reserved for statistical testing depends on how unsure one is about the best model and how important the estimation and testing of one optimal model is felt to be. For illustrations of the results of this separation of the searching from the assessing procedures, see the volumes of findings, *Five Thousand American Families--Patterns of Economic Progress*, Volume I, pp. 6-8 and pp. 342-344; Volume II, Chapter 9; and Volume IV, Chapter 2 (Survey Research Center, Ann Arbor, Michigan).

### Weights

The sample was reweighted in 1978. For a detailed description of how this was done, see *A Panel Study of Income Dynamics 1978 Interviewing Year, Wave XI*, page 6.

### Part 2: 1979 Questionnaire

The 1979 questionnaire with variable numbers from the merged family tape was included in the original published documentation. It is not included in this machine readable version.

You may obtain a paper version of the "1979 Questionnaire with Variable Numbers" by sending a request by e-mail to "psid.staff@umich.edu" or by US mail to Jean Yeung, 3263 ISR, University of Michigan, PO Box 1248, Ann Arbor, MI 48106-1248.

### Part 3: Editing Procedures and Worksheets

The editing process serves three main purposes: (1) accounting for all year-to-year changes in family membership, (2) rectifying discrepancies

within the interview before coding, and (3) calculating and recording numeric data on the worksheets for keypunching. It is a complicated task requiring a high degree of accuracy, so each interview is checked by another editor.

Each interview is screened for discrepancies requiring a return trip to the field. Family composition editing and occupation coding are the next step. Finally, the massive edit is done, and interviews are considered "clean" for coding.

The full array of past interviews is available to editors, though only the past year's interview is usually consulted to solve problems. They are used when the current interview is vague, contradictory, or incomplete despite previous attempts to clarify problems. Project staff closely oversee the editing process, and substantive decisions regarding the handling of specific problems are made by this staff.

The techniques used to edit all previous waves were used to edit Wave XII. Detailed discussion of these techniques will be found in the documentation of Waves I-V of this survey.

#### Family Composition Editing

All people in a Panel family last year must be accounted for this year--either in the old family or as having moved out to form a new family. Sample members who move out are followed and interviewed in the new family. Family composition editing remains unchanged.

#### Wave XII Changes

##### REPAIRS & HOME PRODUCTION

For Wave XII only, we added a group of questions in Section A on car repairs done by FU members (type of repair, time spent, amount saved in 1978); in Section B a similar group on home repairs; and in Section J a couple of questions on raising or preserving food (amount saved in 1978). Similar questions were asked during the first 5 waves of interviewing (1968-1972). See the alphabetical index for variable numbers and Documentation Volume II (Waves I-V) for exact wording of the questions.

Note that we have a code for amount saved in 1978 (V6318=0299, V6335=00299, V6385=0299) that does not mean "\$299" but "more than \$200, NA or DK how much."

##### ASSIGNMENT TABLES

In Wave XII, for the first time, we used an inflation factor in some of our assignment tables. The tables were first drawn in the usual manner using last year's (Wave XI) data, then each figure was increased by the percent of inflation for that category. The inflation factors were derived

9

10

from the Implicit Price Deflators of the Commerce Department's Survey of Current Business, January 1979, by comparing the 4th quarter of 1977 to the 4th quarter of 1978. The factors used are as follows:

House Value for Homeowners (V6319), 13%

(note that if we have a house value for this house from last year's interview we used it, plus 10%, with an accuracy code of "1" in preference to the table value which always carries an accuracy code "2.")

Annual Rent for Renters (V6326), 8%

Imputed Annual Rent for Nonowners/Nonrenters (V6330), 8%

Annual Utilities (V6332), 8%

Annual Food Cost Except Food Stamps (V6376), 12%

Annual Cost of Eating Out (V6378), 12%

Because of rising interest rates, we have increased the percentages used in calculating remaining mortgage principle (V6321) and annual mortgage payments (V6323) where missing data makes assignment of these values necessary. If R has moved in the last year we now use 10% tables (instead of 8%) and if R has not moved we use 8% tables (instead of 6%).

## PROPERTY TAX

We are again asking the annual property tax for homeowners as we have for all years except Wave XI. No assignments were made for missing data.

## WIFE'S WORK

We expanded the questions about Wife's work to three sections parallel to (although not quite as detailed as) Head's three work sections. We plan to keep this expanded format in future years.

## CHILD CARE

A series of questions on child care was included at the end of Section J. Note that our interviewing period (March-July) includes both part of the school year and summer vacation, so that the arrangements for school age children may depend on when the interview was taken. These questions will not be asked next year.

## HEAD &amp; WIFE INCOME

We have made two separate questions for income from "Market Gardening" and "Roomers and Boarders" which constituted a single question in previous waves. This change was made to facilitate editing and will be retained for future waves.

11

## EXTRA EARNERS

We have considerably expanded and modified the Extra Earners questions from a single column asked only for FU members who had income, to two pages asked for every FU member (other than Head and Wife) age 16 or older. In addition to the questions previously asked, we have added one on current employment status. We have also added questions about number of weeks in school during 1978 and highest grade completed, and have dropped the questions in Section A about FU members who stopped going to school in the last year.

A much briefer set of questions also picked up income data for children under 16. Unfortunately, in reformatting these questions, we neglected to ask for work hours of those who held jobs--an oversight that will be corrected in Wave XIII. Thus, except where the respondent volunteered the information, all work hours for children under 16 had to be assigned.

The 1979 edit worksheets with variable numbers from the merged family tape was included in the original published documentation. It is not included in this machine readable version.

You may obtain a paper version of the "1979 Edit Worksheets with Variable Numbers" by sending a request by e-mail to "psid.staff@umich.edu" or by US mail to Jean Yeung, 3263 ISR, University of Michigan, PO Box 1248, Ann Arbor, MI 48106-1248.

## Part 4: Coding Procedures

### Introduction

After each interview has been edited as described in Part 3, the remaining information is coded. This process converts nonnumerical answers into numbers. With open-ended questions, it is a matter of some importance how reliable this coding process is and, particularly in a panel study, whether the procedures are stable from one year to the next. Systematically changed procedures can do more damage than a little random error. The stability of this process from year to year, or coding "drift," has been studied; the results may be found in the 1973 manual.<sup>1</sup> In this section only the question of reliability, or intercoder variance, is dealt with. This reliability is essentially a measure of the ambiguity of the codes and accuracy of the coders.

This year the Direct Data Entry system was used in coding. This system bypasses the keypunch operation. The Coding Section has staff to help in the design of the screens. They work with the Panel Study staff to work out internal consistency checks and any problems special to a particular study.

Coders are trained by a member of the staff before they are allowed to production-code interviews. Training consists of a short talk on the history and purpose of the study and answers to questions the coders may have about the study in general. The coders are then required to code two practice interviews which illustrate some of the problems that might be encountered during production-coding.

Approximately 10 percent of the interviews (631) were coded twice--once by the coder and a second time by the staff member (or check coder). Check coding consists of an item-by-item check of the coded values independently coded by a second person. This enables the staff to determine before many interviews have been coded whether any coder is having difficulty and if any particular codes are causing unnecessary problems.

A difference is a disagreement between the coder and the check coder. Differences become errors when they are so judged by the check coder. Most errors which are not caught during check coding are discovered and corrected during data cleaning operations. This procedure assumes that when the coder and check coder are in agreement, no error was made.

### Coding Errors

There was only one error of 2.5 percent or over: Date of Interview. This is a bracket code, and there are always problems with them. The coders will think they know the code, when in fact they do not. And they

---

<sup>1</sup>Procedures and Tape Codes, 1973 Interviewing Year, Wave VI, a Supplement, Institute for Social Research, Ann Arbor, Michigan, 1973, pp. 45-61.

therefore will use the wrong code. This will be corrected on the 1980 code.

#### Coding Disagreements

The first disagreement, V6461, Number in FU was because the coders used the number the pre-editors pre-code for the total number of lines used on the Family Listing Worksheet rather than counting only those listed as in the family. The pre-coded number included those that had moved out.

Question A10, V6476, the complexity of auto repairs, had 7.6 percent disagreements because of the differences of opinion on how complex some repairs are.

Questions B23 and B26 (V's 6486 and 6489) use the same code for why the respondent has moved since the previous interview, if he has, and why he might move in the future, if he might. The majority of disagreements in these variables were between code 8 and codes 5, 6, and 7. Code 8 is a catch-all category; ambiguous or mixed reasons are put there, and in the variety of responses it is easy to put complicated replies into it.

Question B28 (V6491), complexity of house repairs. The disagreements were on how complex some repairs were.

Disagreements about question C14 (V6503) "Why is it (the new job) (better/worse)?" were a matter of interpretation of the answers given by the respondents. They usually do not use the same wording as in the code. This is a problem with questions asked every year. The code must remain the same to maintain consistency, but respondents are not always consistent.

The disagreements on question C36 (V6524) "How is that?" (how the respondent was paid if not salaried or hourly) were caused by there not being clear definition of some of the categories. Also, some respondents were not clear on just how they were paid.

Question C57 (V6544), "Why is that?" (why the respondent would not be willing to move to earn more money) had a high disagreement rate because the code used was from previous years and the respondents do not use the same wording as in the code. The coders had problems trying to fit what was said into the code.

Question J8 (V6665), "Does anyone else here in the household help with the housework?" was complicated by the interviewer checkpoint. The interviewer did not always check the right box and the coders did not catch it. This is a problem when coders are coding along and not reading carefully what they are coding; they just code whatever is checked.

V's 6669 and 6670, questions J38 and J39, "How is your (youngest) child taken care of during work hours?" and (If in school) "What about after school or when school is closed?" had disagreements because coders had some difficulties understanding priority codes. Most of these difficulties were taken care of early in the coding process.

14

Question K65 (V6694) "Would you feel you had to support your parents or other relatives (more) if you had more money?" disagreements were between codes 1 and 3, deciding when a response was qualified or not.

Questions K70, K72, and K73 (V's 6699, 6700, 6702, 6703, and 6705) "What are they?" (What kind of high prices hit them particularly hard), "What have you done?" (about the high prices), and "How have they changed?" (the respondents plans about retirement) are all new questions this year. The coders again had problems with the "other" category being low priority.

#### Summary of Reliability

Table 5  
RELIABILITY SCORES

| Errors 2.5 percent or over:        |                 |               |
|------------------------------------|-----------------|---------------|
| Question Number                    | Variable Number | Percent Error |
| Date of Interview                  | V6459           | 7.5           |
| Disagreements 2.5 percent or over: |                 |               |
| Question Number                    | Variable Number | Percent Error |
| Number in FU                       | V6461           | 2.5           |
| A10                                | V6476           | 7.6           |
| B23                                | V6486           | 5.7           |
| B26                                | V6489           | 10.8          |
| B28                                | V6491           | 9.2           |
| C14                                | V6503           | 4.3           |
| C36                                | V6524           | 2.9           |
| C57                                | V6544           | 5.0           |
| J8                                 | V6665           | 3.8           |
| J38, J39                           | V6669           | 3.0           |
|                                    | V6670           | 5.0           |
| K65                                | V6694           | 7.5           |
| K70                                | V6699           | 5.2           |
|                                    | V6700           | 5.7           |
| K72                                | V6702           | 4.0           |
|                                    | V6703           | 3.0           |
| K74                                | V6705           | 8.0           |

Overall coding error rates for 1979 are .55 per interview. Although most of the coding staff were new to the Panel Study and to the Direct Data Entry System, they were all experienced coders and did a good job.

15

#### Part 5: Generated Variables and Additional Data

Various indexes, bracket variables, and complex measures of economic status have been constructed each year using variables derived directly from coded interview data. Each year changes in the interview schedule have made additions and deletions of indexes necessary. In general, if an index could not be built to be exactly comparable to a previous index, no index was constructed.

#### Income

Several measures of economic status have been generated for all twelve years, including money income variables and measures of income adequacy. Family Money Income, one of the simplest indexes, is the total of all members' earnings, transfers, and capital income (1979: V6766). Total real income and net real income could not be created in 1979 because there was incomplete information about nonmoney income.

#### Ratio of Income to Needs

Measurement of a family's economic status requires comparison of the family's income with some measure of its needs. A full description of the needs standard used by the Panel Study is found in our documentation volume for Wave VII, 1974. For analytical purposes, a convenient measure of this relationship is expressed by a ratio of family income to family needs. Total Family Money Income (V6766) divided by Annual Need Standard (V6364) is the only income to needs ratio available for 1979 (V6769). Note that the need standard is not adjusted for inflation.

Several numerical variables, such as family money income, had been, until Wave X, given also as bracket (interval) codes. Such interval codes had been constructed for most of the measures where a distribution was useful and appropriate. This includes practically all of the income variables and their components. For Waves X-XII we have provided in the Tape Codes three pieces of information which allow a user to bracket as his own uses dictate: (1) percent 0, (2) percent non 0, and (3) Mean Value of non 0. This information is provided for any variable for which a bracket was provided in 1976.

#### Race

Because the interview schedules are now designed for telephone use, race of respondent, which comes from interviewer observation, has not been obtained for several years. Respondents were assigned race from 1972 data. In the case of splitoffs, race was assigned from 1972 data of the main family (V6802).

#### Regional Data Measures

In addition to personality and behavior, locational and environmental factors are potentially important determinants of an individual's economic status. Consequently, the interview data have been supplemented with in-

16

formation on the employment and income characteristics of the county where the panel family lives. Questionnaires are sent each year to state employment offices asking about current labor market conditions in these counties.

#### Low Income Tax Credit

An "earned income credit" was available for Federal Income Tax Year 1978 to low-income workers who maintained a household and had dependent children. The credit may provide a refund or subsidy up to \$400. We have created this as a separate variable (V6789). It can be subtracted from Total Estimated Federal Income Tax of Head and Wife (V6411) to find the added savings in taxes or income subsidy that it gives low-income families.

Eligibility for the credit was figured for Heads and Wives in the following way: (1) assuming that all Heads maintain a household (pay at least half the expenses of the household), then (2) Number of Children in Family Unit Under 18 (V6465) must be greater than zero, and (3) Earned Income, Total Taxable Income of Head and Wife (V6408) minus Rent, Interest, Dividends, etc. (V6404) must be greater than zero and less than \$8,000 because the credit is based on earned income, and any credit disappears at earned income of \$8,000.

The credit was computed in the following manner: (1) From Total Taxable Income of Head and Wife (V6408), subtract \$4,000 with negative amounts equaling zero; (2) subtract 10% of the amount in (1) from 10% of Earned Income as described in above paragraph (this amount not to exceed \$400). For example:

|                      |   |   |
|----------------------|---|---|
| Total Taxable Income | = | \$5,000                                       |
| Earned Income        | = | \$4,800                                       |
| 10% of Earned Income | = | \$ 400 (really \$480, but the limit is \$400) |
| 10% of Total Taxable |   |   |
| Income minus \$4,000 | = | \$ 100 (\$5,000 - \$4,000) x .10              |
| Low Income Credit    | = | \$ 300 applied to taxes or paid as subsidy    |

#### Marital Status

We have asked a new series of Marital Status questions in the inter-

view for the last three years. V6790 is a recoding of these new questions to make Marital Status comparable to past years. In all years before 1977, a respondent's answer to Marital Status was edited to conform to our definitions. (See Tape Code V's 6659-6661.)

This year we again created a "Year-to-Year Change in Marital Status" variable (V6812) comparable to last year's V6219. This variable reflects Head's Change in Marital Status from 1978 to 1979.

17

#### AFDC Maximum Monthly Allowance

We have added a variable (V6318) to the dataset which is the maximum monthly dollar benefit that the state of residence of the Respondent allows for a family of four (one adult and three children). This allowance is "for all basic needs" as defined by the state. The figures are from Social Security Bulletin, September 1979, Vol. 42, No. 9, pp. 11-21 and are "as of April 1, 1978."

#### Part 6: Data Available

For each year of this study, both an individual unit and a family unit tape have been created. In addition, the family tape has been merged with the previous years' family tapes so that there are two through twelve year merged family tapes. The individual tapes were merged for five through twelve year bases only. Two tapes have also been created using the 1967 S.E.O. data for that part of the sample that was originally interviewed by the Census.

For a detailed description of these tapes, see A Panel Study of Income Dynamics, Volume I, 1972. Briefly, the annual family tapes include one record for each family interviewed that year. The family-individual tapes contain one record for each individual in these families. Included on each record is information specific to the individual plus all the data for the family in which the person was living that year.

The twelve-year merged family tape contains all twelve years of data for every family interviewed in 1979 (including the 1976 wives' data). The record for a family which was formed after 1968 contains the data for the main family for the years before the new unit split off. The twelve-year individual tape contains the data for the family in which the individual was living each of the twelve years and all twelve years of individual information. The tape contains records for the following individuals:

- a. Sample members living in the Panel families (or in institutions) in 1968 through 1979.
- b. Sample members who were born after 1968. The individual data for these children contain zeros for the years before they were born except for their 1968 person numbers.
- c. Sample members who were living in Panel families in 1968 but who subsequently died or moved out and were not followed. The records for the years after these members left contain zeros. Their weight is also zero. These records should only be used to generate 1968 family composition variables (e.g., number of pre-school children). A few of these persons have moved back into the Panel. Data was again inserted for the years in which they have been present. 1979 weights are present for such persons if they are still in the Panel.
- d. Nonsample members living with Panel families in 1979 who moved in after 1968. Individual information before they moved in contains

18

zeros, except for the 1968 person numbers, and their weight is also zero.

There is a variable on the merged individual tape specifying the type of individual record for years one through five only. This may, however, be updated by the user. This tape is very long (approximately 21,000 records with 12,700 tape locations), so machine capacity should be considered before attempting analysis on this tape.

All inquiries for information about this study should be in writing to: Member Services, Inter-University Consortium for Political and Social Research, Institute for Social Research, University of Michigan, P.O. Box 1248, Ann Arbor, Michigan 48106. Refer to Project 457701.

#### Part 7: Notes on Use of Data

##### Tricky Aspects of a Self-Replacing Panel

In order to use panel data, one must understand the demography of populations that are continually being replaced. The average age of such a population does not change, even though each member ages, because each year a few very old people die and are "replaced" by some very young ones. Due to this replacement, a panel containing the same families never represents aggregate trends.

The Panel data allow one to look at the history of any family which contains sample members in the most recent year, but this implies the introduction of duplicate family records for earlier years in cases where the members of that early family have divided into two or more current ones. To average the 1967 income for all families in the 1979 Panel, then, does not give a measure of the average income of all families in 1967. Restricting the analysis to families with the same heads of households all twelve years may eliminate too much; the "same head" subgroup is excellent for following fortunes of people over the period, but not for describing national trends. For instance, the splitoffs, who are mostly just entering the labor force, suffer the most unemployment, move the most, have the largest increases in income.

For some purposes, it might prove optimal to study year-to-year changes for all units with the same head for those two years, minimizing the population turnover problem. For others, it is clearly best to look at individuals so only those who die or disappear are lost. Means for these individuals or their subgroups will, except for nonresponse, represent national trends.

##### Employment Sequences

The user may have observed that each head of household is asked a different sequence of questions, based on his reply to Question C1, "We would like to know about your (Head's) present job--are you (Head) working now, looking for work, retired, a housewife, or what?" Current employment status may be irrelevant to 1979 labor force participation, especially in these times of high unemployment; therefore, we have continued with an index which tabulates all variables in the sequence V6493-V6589, as some of

19

the questions in each of the three employment-related sections are similar. Please see Section III, Part 4, for further details.

##### On Creating a Family Tape From the Merged Eleven-Year Individual Tape

Since the twelve-year individual tape is very unwieldy with its almost 21,000 cases and 12,700 tape locations, and the researcher might well be interested in analyzing the data largely from a family basis, it was thought helpful to append suggestions on the creation of a family file from the individual data.

The structure of the individual file combines family data for each person in the family unit with that person's unique individual information. Each individual is assigned a unique sequence number (V7042) which indicates that person's position on the 1979 list of people in the family; thus, the first person listed is 01, the second person listed is 02, and so on. To create a family file, it is necessary only to write off onto a new tape those cases where V7042 = 01, since each family must have at least one member, although it may or may not have two or more. It is suggested that V7042 be used as opposed to V7043, relationship to head, because although

each family has one and only one current head (i.e., where V7042 = 01-20), it is possible that the head of the family has moved out since the previous interview and a new head has become ensconced. Relationship to head of movers-out is coded with reference to last year's head, so for both the current head and the previous head, V7043 = 1.

#### College Ratings

Four college ratings for college attended by Head and four college ratings for college attended by Wife were added to the data set in Wave VIII (1975). These ratings were updated in Wave IX (1976) only for new heads and new wives; i.e., most of the 1976 variables are coded zero.

The best way to use these variables is to sum each pair, as one of the pair will always be zero.

Head: V4216+V5088, V4217+V5089, V4218+V5090, V4219+V5091

Wife: V4220+V5092, V4221+V5093, V4222+V5094, V4223+V5095.

## Part 8: Twelve-Year Family-Individual Hierarchical Database

The purpose of this section is to acquaint the users of the Panel Study of Income Dynamics database with recent changes in local data processing procedures. Each yearly addition of data is now incorporated into the database through OSIRIS.IV structured file processing procedures. Although the database will continue to be distributed in the rectangular format of previous years, it will be generated as an OSIRIS.IV structured or hierarchical file. The following discussion provides a general overview of the current structure of the PSID database.

Because the PSID continues to follow families (and individuals within these families) from year to year, the complexity of the data management process has grown in proportion to the database. Coping with change in family composition while remaining within an annual processing schedule is one dimension of this problem. Maintenance of within-year and cross-year data consistency is yet another.

During the first five years of data collection, problems arising in merging and updating cross-year data were relatively easy to solve within the constraints of the then existing computing environment. As the database continued to expand, a variety of hardware and software limitations began to hamper the data management process. By the ninth year of data collection, the PSID Family-Individual File resided on five 1600 BPI tape reels, with an N of 21,000 and a logical record length of 9381 bytes per case.<sup>1</sup> Processing a file of this magnitude, while not impossible, consumed a considerable amount of computing and person time. Because of this the PSID study staff began to seek alternative processing methods.

### STRUCTURED FILE DEVELOPMENT

Before moving to a structured file system, the PSID data management staff spent a considerable amount of time developing an abstract structure, or schema, that would provide for optimal organization of the study's data. Since any proposed structure had to satisfy all data retrieval needs for PSID researchers, the schema required would minimally have to provide for the retrieval of: a current year family file, a cross-year family file, a current year family-individual file, and a cross-year family-individual file.<sup>2</sup> At the same time, study staff were aware of the potential needs of

---

<sup>1</sup>By contrast, the 10 Year structured file occupied the equivalent of 1.4 1600BPI tape reels.

<sup>2</sup>The current year family and the cross-year family files each contain one family level data record for each sample family responding in the current year; additionally, each record in the cross-year family file is preceded by its family data from all previous years. The current-year and the cross-year family-individual files contain one record for each individual who is a member of a responding family in the current year. The current-year family-individual file contains each family member's in-

non-ISR users of the database. Most, if not all, users of PSID data require rectangularized data records. Moreover, new versions of the database are expected to be received in a format that is compatible with previous versions. As a result, rectangular files retrieved from the structured database are compatible in all respects with previous datasets and with their documentation.

#### The Complexity of Family Structure.

Over the years the PSID data management staff have become as concerned with the accurate representation of family composition as they have been with the accurate assessment of family economic structure. Since many of the derived income measures, (e.g., the ratio of family income to family needs) are based on the number of people living in the household, it is essential that the correct individuals appear on the interview schedule. The PSID follows all new families that split off from the original 1968 root (sample) family; therefore it is not uncommon to find individuals who move between different sample families. Other common changes in family structure, such as divorce and remarriage (to original or new partners), as well as less common occurrences such as marriage between members of different 1968 root families (three such cases exist at present), do much to complicate all aspects of PSID data handling procedures.

The PSID database is bounded by three elements: family, individual, and time. Within a given year's data, there exists a natural hierarchy since each set of individual records is linked to one family record. However, the introduction of the time element destroys the usefulness of a simple family-individual hierarchy. Over time, a family may experience a great deal of structural change: sample members leave and start their own homes (and may later reenter their original family), new sample members are born in, and non-sample members move in and out. Because these family changes are so widespread and because individuals frequently move between sample families over time, it is impossible to link a set of individuals who are living together as a family in the current year to one common family history. Individuals who are living together now may have been members of different families in previous years. Linking them all to one set of supposedly shared past family records would be inaccurate. Also, when there are radical changes in family structure over time it is often quite difficult to devise a rule that determines which branch family is most representative of the 1968 root family line.

Actually it is somewhat confusing to say that the PSID follows families over time. From a data management perspective, the PSID does not follow families from year to year; rather, it follows individuals who aggregate themselves into families at discrete points in time. The study collects family data each year and introduces new sample members who are born into a family into the database, but to the data processing staff,

---

dividual level data preceded by his or her family level information for the current year. A record on the cross-year family-individual file consists of N years of family data followed by N years of individual level records for each person.

"family" is a construct imposed on a collection of individuals who happen to be living together at a given point in time.

Two examples of cases that would not be adequately represented by a simple family-individual hierarchy follow: The first is a situation where sample daughter X moves between her parental family and the family of an older sister. Both of these families are sample families with separate records on our file. In order to perform an accurate analysis of daughter X's data, her individual record for each year must be linked to the family in which she resided that year. A second example is that of a husband and wife who split up in the past into separate families for a few years and

later recombine. In order to have an accurate assessment of a person's economic well-being over time, the individual must be linked to all of his or her previous family records, even if that family line has been abandoned.

The concept of family history was developed to provide a link between individuals and their correct past family records. A family history is simply all the yearly family records that one individual has moved through over time. In most PSID sample families, the majority of respondents share similar family histories. However, in structurally unstable family units many different family histories may be present. Figure 1 presents an example of a fictional family that has undergone a moderate amount of change in ten years. This family (1968 ID = 1010) will be used as our example on the following pages.

In Figure 1 a fictional family (1968 ID=1010) starts off with a father, mother, 2 sons and one daughter in 1968. In 1969 the younger brother (person # 04) "split off" from his parental family and started his own household, taking his younger sister (person # 07) along with him. This sister lived in her brother's split-off family for the years 1969 and 1970. In 1971 she left her brother's household and rejoined her parents' household unit.

By 1979, two families (1979 ID's 1021 and 4050) are interviewed. Four people remain in the original "root" household and the brother (person # 04) still lives by himself. The important thing to note is that in 1980, family 1021 will have 2 family histories for 4 individuals.

#### The Structure of the PSID Database.

Figure 2 presents the logical structure or schema of the PSID data base (this example is based on the 12-year Family-Individual file). At the root of the structural tree is the family record for the current year; this is a Level 1 record. Level 2 records contain family data for past years, each unique collection of past family records constituting a family history. Level 3 records contain individual data, one record per year for each individual. All the individuals living in family X during year Y have their past individual records (level 3) linked to the data records of the families they belonged to in the past (level 2) and to the current family record (level 1).

24

Figure 1: Chart of 1968 Seed (root) Family '1010'

| Year | Main Family |               |     |     | Split-off Family |               |     |     |
|------|-------------|---------------|-----|-----|------------------|---------------|-----|-----|
|      | ID          | Person Number | Sex | Age | ID               | Person Number | Sex | Age |
| 1968 | 1010        | 01            | m   | 45  |                  |               |     |     |
|      |             | 02            | f   | 43  |                  |               |     |     |
|      |             | 03            | m   | 25  |                  |               |     |     |
|      |             | 04            | m   | 24  |                  |               |     |     |
|      |             | 07            | f   | 11  |                  |               |     |     |
| 1969 | 1011        | 01            | m   | 46  | 4040             | 04            | m   | 25  |
|      |             | 02            | f   | 44  |                  | 07            | f   | 12  |
|      |             | 03            | m   | 26  |                  |               |     |     |
| 1970 | 1012        | 01            | m   | 47  | 4041             | 04            | m   | 26  |
|      |             | 02            | f   | 45  |                  | 07            | f   | 13  |
|      |             | 31            | f   | 01  |                  |               |     |     |
| 1971 | 1013        | 01            | m   | 48  | 4042             | 04            | m   | 27  |

25

Figure 2: Schema -- logical structure of PSID data (in tree format)

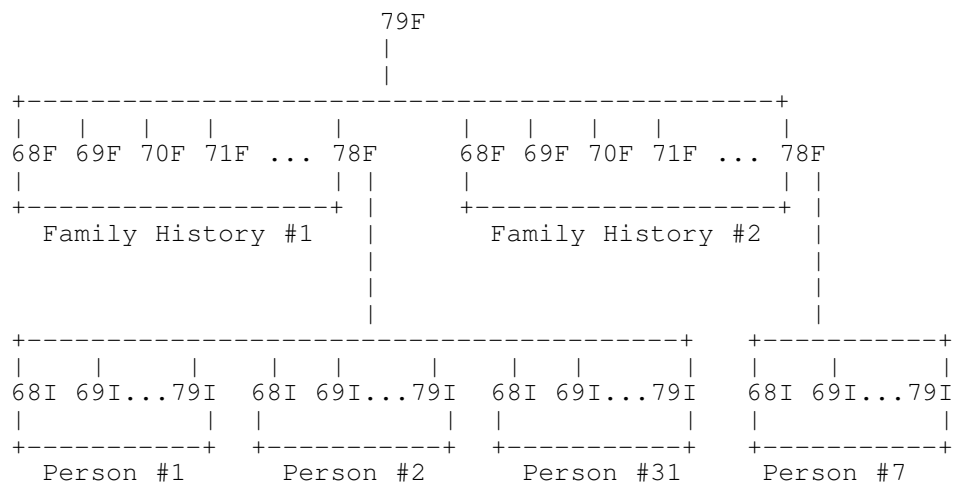

Figure 3: Instance -- an actual occurrence of the schema (Family '1021')

#### Retrieval of PSID Data

To retrieve any subset of the database the analyst must first conceptualize an appropriate sub-schema.<sup>3</sup> The user gives OSIRIS.IV retrieval instructions in order to get the sub-instances defined by the sub-schema.

3A sub-schema is a user's view of the data for a given piece of analysis.

4Certain additional instructions may be necessary to allow for such circumstances as missing data due to non-response in one or more years.

26

Figure 4: Accessing the PSID 1968-1979 Database

| Analysis Subset<br>(sub-schema)   | ENTRY Instructions   |
|-----------------------------------|--|
| Cross-year<br>Family-Individual   | UNIT=3<br>G1+G2+...+G12+G68+...+G79                              |
| Cross-year Family                 | UNIT=1<br>G1+G2+...+G12<br>G=2 LEVEL=1<br>.<br>.<br>G=12 LEVEL=1 |
| Current-year Family               | UNIT=1<br>G1   |
| Current-year<br>Family-Individual | UNIT=3<br>G1+G79   |

These instructions have been eliminated in our examples for the sake of simplicity. The user should remember that in OSIRIS.IV, the Entry Definition Language defines the sub-schema; the ENTRY procedure passes each sub-instance to the analysis program upon execution.

## Part 1: Twelfth-Year Family Tape Code

The following are the codes for the twelfth-wave information from the interview schedule. The twelve-year individual tape code will be found in Part 2 of this section. The variable numbers and tape locations appearing first refer to the twelve-year merged tape. For the codes for the first five waves of this study, see A Panel Study of Income Dynamics, Volume II. The remainder of the codes for Waves VI through X will be found in successive volumes entitled A Panel Study of Income Dynamics: Procedures and Tape Codes. The distributions for the following variables are weighted and based on all families interviewed in 1979. For generation of distributions on field amounts, percent zero, percent nonzero, and mean values are provided.

## Tapecode Information

The example below illustrates the information contained in this codebook for a typical variable. The numbers in brackets do not appear in the codebook, but refer to the explanations which follow this example.

[1] 6309 = Cross-year variable number [2] Name = TELEPHONE INT ? 1979

[3] 11221 = Cross-year Tape Location [4] MD=9

[5] Whether Telephone Interview in 1979

[6] [7] [8]

|           |      |    |                     |
|-----------|------|----|---------------------|
|           | 7.6  | 0. | Personal Interview  |
| [9]-----  | 91.4 | 1. | Telephone Interview |
| [10]----- | 0.5  | 2. | Mail Interview      |
|           | 0.5  | 9. | NA                  |

1. Indicates the cross-year variable number. A variable number is assigned to each item in the study. (See the alphabetical index for a list of the range of variable numbers specific to each year.)
2. Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. This abbreviated variable name is identical to the variable name listed in the OSIRIS dictionary for this variable. It is also listed as a subheading of the printout when a variable is accessed in an

27

28

OSIRIS program. When used in this manner, the abbreviated variable name can be useful as a cross-reference tool, as well as a way to avoid errors.

3. Indicates the starting location and ending location for this variable when the data are stored on a magnetic tape in the OSIRIS format.
4. Indicates the code values of missing data. In this example, code values equal to nine are missing data (MD=9). Alternative statements for other variables are "MD=0 or GE 8" or "MD=GE 7." In cases where nothing is written in this space, there are no missing data codes for the variable.

Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to exclude from analysis can be designated as "missing data," e.g., in-

appropriate, unascertained, or ambiguous data categories. Although these codes have been defined by the PSID staff as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.

5. Indicates the full question number that was used in the questionnaire, as well as the exact wording of the questionnaire item.
6. Indicates the weighted percentages for each code value.
7. Indicates the code values occurring in the data for this variable. In some cases there will be a full field of "X's" in this column. These X's indicate that the actual number was coded. For example, a variable about the respondent's earnings per hour might include the following code value:  
  
XXXX. Actual dollars and cents per hour
8. Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are "DK" (Don't Know), "NA" (Not Ascertained), and "Inap." (Inappropriate).
9. Indicates the "% nonzero" value, where specified.
10. Indicates the "mean nonzero" value where specified.

| 13-15        | 7.40   | 6.90   |
| 16-20        | 8.70   | 7.20   |
| 21-35        | 7.50   | 6.50   |
| 36-55        | 6.90   | 6.30   |
| 56 and older | 6.30   | 5.40   |

(This same standard has been used in Waves I-XII. Adjustments for inflation, etc., are left to users.)

46

Annual Need Standard in 1978

mean nonzero = 3,137.7

This is the Orshansky-type poverty threshold, based on an annual food needs standard derived from the weekly food costs above, which is converted to an annual amount and adjusted for economies of scale by USDA rules as follows:

|                         |          |
|-------------------------|----------|
| Single person . . . . . | .add 20% |
| Two persons . . . . .   | .add 10% |
| Three persons . . . . . | .add 5%  |

|                               |             |
|-------------------------------|-------------|
| Four persons . . . . .        | .no change  |
| Five persons . . . . .        | .deduct 5%  |
| Six or more persons . . . . . | .deduct 10% |

An additional adjustment for diseconomies of small households (in rent, etc.) was made as follows for the Annual Need Standard):

- 4.89 times the food needs for single persons
- 3.70 times the food needs for two-person units
- 3.00 times the food needs for all other units

(Not adjusted for farmers; see V6769 for an income/needs measure which makes this adjustment.)

11727 = Cross-year Tape Location MD=9

B17. How is that? (Neither owns nor rents)

1. Servant; housekeeper  
0.2 2. Farm laborer; ranch laborer  
  
0.6 3. Other persons for whom housing is part of compensation  
(janitors, gardeners, nurses, tutors, etc.)  
  
2.9 4. Persons for whom housing is a gift; paid by someone outside  
of FU; owned by relatives; pay no rent or only pay taxes.  
  
0.1 5. Sold own home, but still living there  
  
0.1 6. Living in house which will inherit; estate in process  
  
0.1 7. Living in temporary quarters (garage, shed, etc.) while home  
is under construction or until new apartment is found.  
0.6 8. Other  
0.1 9. NA; DK  
95.2 0. Inap.; owns or rents; V6479=1, or 5

6484 = Cross-year variable number Name='B21 MOVE SINCE SPR 1978 '  
11728 = Cross-year Tape Location MD=9

B21. Have you (HEAD) moved since the spring of 1978?

24.5 1. Yes  
  
75.5 5. No  
  
9. NA; DK

78

6485 = Cross-year variable number Name='B22 MONTH MOVE '  
11729-11730 = Cross-year Tape Location MD=99

B22. What month was that? (most recent move)

01. January  
02. February  
03. March  
04. April  
05. May  
06. June  
07. July  
08. August  
09. September  
10. October  
11. November  
12. December  
  
99. NA  
00. Inap.; did not move; V6484=5 or 9

6486 = Cross-year variable number Name='B23 WHY MOVE '

- B23. Why did you move?
- 3.2 1. Purposive productive reasons: to take another job; transfer; stopped going to school
- 0.8 2. To get nearer to work
- 3.4 3. Purposive consumptive reasons--expansion of housing: more space; more rent; better place
- 1.6 4. Purposive consumptive reasons--contraction of housing: less space; less rent
- 6.3 5. Purposive consumptive--other house-related: want to own home; got married
- 1.4 6. Purposive consumptive--neighborhood-related: better neighborhood; go to school
- 3.5 7. Response to outside events (involuntary reasons): DU coming down; being evicted; armed services, etc.; health reasons; divorce; retiring because of health
- 3.8 8. Ambiguous or mixed reasons: to save money; all my old neighbors moved away; retiring (NA why)
- 0.4 9. NA; DK
- 75.5 0. Inap.; did not move; V6484=5 or 9

79

6487 = Cross-year variable number Name='B24 WTR MIGHT MOVE '  
11732 = Cross-year Tape Location MD=9

- B24. Do you think you might move in the next couple of years?
- 34.9 1. Yes; might or maybe, hope to
- 61.4 5. No
- 3.6 8. DK
- 0.1 9. NA

6488 = Cross-year variable number Name='B25 LIKELY HOOD OF MOVE '  
11733 = Cross-year Tape Location MD=9

- B25. Would you say you definitely will move, probably will move, or are you more uncertain?
- 15.2 1. Definitely
- 12.6 2. Probably
- 7.0 3. More uncertain
- 0.1 9. NA
- 65.1 0. Inap.; does not plan to move; V6487=5, 8 or 9

6489 = Cross-year variable number                    Name='B26 WHY MIGHT MOVE            '  
           11734 = Cross-year Tape Location            MD=9

B26. Why might you move?

- 5.1 1. Purposive productive reasons: to take another job; transfer;  
stopped going to school
- 0.8 2. To get nearer to work
- 5.9 3. Purposive consumptive reasons--expansion of housing: more  
space; more rent; better place
- 2.3 4. Purposive consumptive reasons--contraction of housing: less  
space; less rent
- 8.9 5. Purposive consumptive--other house-related: want to own home;  
got married
- 2.8 6. Purposive consumptive--neighborhood-related: better neighbor-  
hood; go to school
- 3.4 7. Response to outside events (involuntary reasons): DU coming  
down; being evicted; armed services, etc.; health reasons;  
divorce; retiring because of health
- 5.2 8. Ambiguous or mixed reasons: to save money; all my old neigh-  
bors moved away; retiring (NA why)
- 0.5 9. NA; DK
- 65.1 0. Inap.; does not plan to move; V6487=5 or 9

6490 = Cross-year variable number                    Name='B27 OWN REPAIR-HOUSE            '  
           11735 = Cross-year Tape Location            MD=9

B27. Did you (or your family) do any work (yourself/yourselves) on  
your (house/apartment) during 1978? I mean repairs or remodel-  
ing.

- 36.3 1. Yes
- 63.6 5. No
- 0.1 9. NA; DK

6491 = Cross-year variable number                 Name='B28 TYPE REPAIR-HOUSE       '  
                   11736 = Cross-year Tape Location                 MD=9

B28. We would like a rough idea of how much time you spent and how much money you saved. What did you do?

- 2.9 1. Very extensive and complex additions or repairs: Build a house, add a bathroom, build addition to house, completely rewire house, rebuild house foundations, new furnace or heating system, install plumbing, install central air conditioning, install sewer system.
- 6.1 2. Much skill required: Convert basement to recreation room, finish off attic, remove walls or partition off areas, whole new roof, build a porch, garage, carport, or shed, put on siding, "rewire" (NA how extensive), repair furnace.
- 13.0 3. Fair amount of skill required: Exterior painting, build patio, plastering, landscaping, roof repairs, eaves troughs, repair sewer, blacktop driveway, cement finishing, build cabinets, interior panelling, floor or ceiling tile, install sink or drain pipe, install gas or water heater, install or repair water pump.
- 6.1 4. Some skill required: Linoleum, carpeting, new faucets, repair heater, light fixtures, fences, build window screens, glaze windows, wallpapering, redecorating, interior decorating, new storm doors, "fix up room," "general upkeep."
- 8.1 5. Simple additions or repairs: Interior painting, curtain rods, faucet washers, "painting" (NA in or out), fix hinges, install room air conditioner, "air conditioner" (NA room or central).
- 0.1 9. NA; DK
- 63.7 0. Inap.; no additions or repairs; V6490=5 or 9

82

6492 = Cross-year variable number                 Name='C1 EMP STATUS HEAD                 '  
                   11737 = Cross-year Tape Location

C1. We would like to know about what you do--are you (HEAD) working now, looking for work, retired, a student, (a housewife), or what?

- 69.7 1. Working now
- 1.3 2. Only temporarily laid off
- 2.6 3. Looking for work, unemployed

16.3 4. Retired

3.6 5. Permanently disabled

5.4 6. Housewife

1.1 7. Student

0.2 8. Other

6493 = Cross-year variable number                      Name='C2 WORK SELF/OTR (HD-E) '  
  11738 = Cross-year Tape Location            MD=9

C2. Do you work for someone else, yourself, or what?

60.5 1. Someone else

2.6 2. Both someone else and self

7.9 3. Self only

9. NA; DK

29.1 0. Inap.; unemployed; permanently disabled, retired, housewife,  
student; V6492=308

6494 = Cross-year variable number                      Name='C3 WORK FOR GOVT (HD-E) '  
  11739 = Cross-year Tape Location            MD=9

C3. Do you work for the federal, state, or local government?

12.8 1. Yes

50.3 5. No

9. NA; DK

37.0 0. Inap.; unemployed; permanently disabled, retired, housewife,  
student; does not work for someone else only; V6492=3-8;  
V6493=2-9

83

6495 = Cross-year variable number                      Name='C4 JOB UNION (HD-E) '  
  11740 = Cross-year Tape Location            MD=9

C4. Is your current job covered by a union contract?

19.2 1. Yes

43.8 5. No

0.1 9. NA;DK

36.9 0. Inap.; unemployed; permanently disabled, retired, housewife,  
student; does not work for someone else only; V6492=308;  
V6493=2-9

  11741 = Cross-year Tape Location            MD=9

C5. Do you belong to that labor union?

16.9 1. Yes

2.2 5. No

9. NA; DK

80.8 0. Inap.; unemployed; permanently disabled, retired, housewife,  
student; does not work for someone else only; current job not  
covered by union contract; V6492=3-8; V6493=2-9; V6495=5 or 9

6497 = Cross-year variable number                    Name='C6-C7 OCC-2DIG (HD-E)    '  
           11742-11743 = Cross-year Tape Location        MD=99

C6. What is your main occupation?

PROFESSIONAL, TECHNICAL AND KINDRED WORKERS

- 0.3 10. Physicians (medical & osteopathic), Dentists
- 0.8 11. Other Medical and Paramedical: chiropractors, optometrists, pharmacists, veterinarians, nurses, therapists, healers, dieticians (except medical and dental technicians, see 16)
- 0.8 12. Accountants and Auditors
- 1.8 13. Teachers, Primary and Secondary Schools (including NA type)
- 0.9 14. Teachers, College; Social Scientists; Librarians; Archivists
- 2.7 15. Architects; Chemists; Engineers; Physical and Biological Scientists
- 2.2 16. Technicians: Airplane pilots and navigators, designers, draftsmen, foresters and conservationists, embalmers, photographers, radio operators, surveyors, technicians (medical, dental, testing, n.e.c.)
- 1.1 17. Public Advisors: Clergymen, editors and reporters, farm and home management advisors, personnel and labor relations workers, public relations persons, publicity workers, religious, social and welfare workers
- 0.6 18. Judges; Lawyers
- 0.6 19. Professional, technical and kindred workers not listed above

MANAGERS, OFFICIALS AND PROPRIETORS (EXCEPT FARM)

- 8.8 20. Not self-employed
- 2.7 31. Self-employed (unincorporated businesses)

CLERICAL AND KINDRED WORKERS

- 1.3 40. Secretaries, stenographers, typists
- 5.7 41. Other Clerical Workers: agents (n.e.c.) library assistants and attendants, bank tellers, cashiers, bill collectors, ticket, station and express agents, etc., receptionists

SALES WORKERS

- 3.7 45. Retail store salesmen and sales clerks, newsboys, hucksters, peddlers, traveling salesmen, advertising agents and salesmen, insurance agents, brokers and salesmen, etc.

CRAFTSMEN, FOREMEN, AND KINDRED WORKERS

- 1.8 50. Foremen, n.e.c.
- 11.8 51. Other craftsmen and kindred workers
- 0.7 52. Government protective service workers: firemen, police, marshals, and constables

OPERATIVES AND KINDRED WORKERS

- 3.3 61. Transport equipment operatives
- 7.8 62. Operatives, except transport

LABORERS

- 2.5 70. Unskilled laborers--nonfarm
- 0.6 71. Farm laborers and foremen

85

SERVICE WORKERS

- 0.3 73. Private household workers
- 5.2 75. Other service workers: barbers, beauticians, manicurists, bartenders, boarding and lodging housekeepers, counter and fountain workers, housekeepers and stewards, waiters, cooks, midwives, practical nurses, babysitters, attendants in physicians' and dentists' offices

FARMERS AND FARM MANAGERS

- 1.5 80. Farmers (owners and tenants) and managers (except code 71)

MISCELLANEOUS GROUPS

- 0.9 55. Members of armed forces
- 0.4 99. NA; DK
- 29.0 00. Inap.; unemployed; retired, permanently disabled, housewife, student; V6492=3-8

86

6498 = Cross-year variable number                      Name='C8 INDUSTRY (HD-E)                      '  
11744-11745 = Cross-year Tape Location                      MD=99

C8. What kind of business is that in?

2.8 11. Agriculture, Forestry, and Fishing  
0.6 21. Mining and Extraction

MANUFACTURING DURABLES

2.2 30. Metal industries  
3.9 31. Machinery, including electrical  
3.4 32. Motor vehicles and other transportation equipment  
2.6 33. Other durables  
0.4 34. Durables, NA what

MANUFACTURING NONDURABLES

1.5 40. Food and kindred products  
0.1 41. Tobacco manufacturing  
1.2 42. Textile mill products, apparel and other fabricated textile products, shoes  
0.4 43. Paper and allied products  
1.7 44. Chemical and allied products, petroleum and coal products, rubber and miscellaneous plastic products  
45. Other nondurables  
46. Nondurables, NA what  
0.5 49. Manufacturing, NA whether durable or nondurable

5.8 51. Construction  
3.4 55. Transportation  
1.2 56. Communication  
1.3 57. Other Public Utilities  
7.1 61. Retail Trade  
1.9 62. Wholesale Trade

xxxxx. Actual dollar amount of transfers  
99999. \$99,999 or more

6769 = Cross-year variable number                    Name='TOT 1978 FAM /NEEDS            '  
          12165-12168 = Cross-year Tape Location

Total 1979 Family Money Income/Needs (1979)

mean nonzero = 6.1

Total 1979 family money income (V6766) divided by 1978 family needs  
(V6364). This ratio is multiplied by 1.25 for farmers (those coded 80  
in V6497 or V6557) to adjust for lower food costs. This is the only  
measure of income to needs on this tape which makes this adjustment  
for farmers.

xx.xx. Actual income/needs ratio  
99.99. Income/needs ratio of 99.99 or more

6770 = Cross-year variable number                    Name='ANNUAL FOOD STD                '  
          12169-12172 = Cross-year Tape Location

Annual Food Standard

mean nonzero = 903.6

This variable is generated by multiplying the weekly food needs  
(V6363) by 52 and then making the following adjustments for economies  
of scale: Add 20 percent for one-person families, 10 percent for two-  
person families, 5 percent for three-person families, and subtract 5  
percent for five-person families and 10 percent for families with six  
or more persons.

xxxx. Food standard for 1979 family  
9999. Food standard of \$9,999 or more

SECTION III

INDEXES

## Part 4: Index of the 1979 Employment Sections

This index compares all the variables from the employment sections for Heads (C, D & E) and Wives of Heads (F, G & H). The Wives' employment questions have been expanded this year from one to three sections paralleling the Heads' three employment sections, although not quite as complete. If there is a Wife of Head in the Family Unit, V6590=1. Which section gets asked is based on employment status (V6492 for Heads, V6591 for Wives).

Many of these variables represent the same or similar questions asked in more than one section. In analysis it might be desirable, for instance, to look at weeks worked in 1978 for all Heads regardless of whether they are currently employed or not. With the tabulations in this index, the user can tell at a glance whether or not the same question was asked of all Heads. Using the example given above, one could generate a new variable on weeks worked in 1978 simply by adding V6515 + V6571 + V6580; since one, and only one, of these variables contains this information for each Head, the other two containing zeros show that the question is inappropriate.

Footnotes indicate variables where the wording or framework of the questions vary significantly from those they are compared to.

1979 Comparative Index for Employment Sections C & F  
 (Employed or Only Temporarily Laid Off);  
 D & G (Unemployed, Looking for Work); E & H  
 (Retired, Disabled, Housewife, Student, Other)  
 Sections C, D & E are for Heads and Sections F, G & H are for Wives

| Whether Retired                  | 6575 | 6647 |
| What Year Retired                | 6576 | 6648 |
| Whether Worked for Money in 1978 | 6577 | 6649 |

Whether  
(Still)  
Working  
Now

6582 6654

-----  
Variable for question asked only in section E (Heads)  
-----

When Might 6585  
Get (a/  
another)  
Job

-----  
\*aRefers to the last job held

\*bRefers to job held during 1978, if any.

\*cRefers to previous job and is only asked where Head or Wife  
has changed jobs in the last year.

\*dRefers to last job and is only asked where Head or Wife  
worked during 1978 or 1979.

\*eIn section C, this question is in terms of moving in order  
to earn more money.  
In section D, it is in terms of moving in order to get a good  
job.

\*fHead may or may not be currently employed.

\*gThis job is in a highly speculative framework.
