Conducted with Grants from the National Science Foundation, the Office of the Assistant Secretary for Planning and Evaluation of the Department of Health and Human Services, the National Institute on Aging, the Food and Nutrition Service of the Department of Agriculture, and the Ford Foundation.
This volume documents the twenty-fourth wave of data collected by the Panel Study of Income Dynamics, interviews taken in 1991 on income for 1990. Volumes I and II of A Panel Study of Income Dynamics: 1968-1972 Interviewing Years (Waves I-V) contain tape codes, indexes, available data, questionnaires and procedures specific to our first five years of data collection (1968-1972). These volumes also describe the early history of the study and some of the basic procedures that are common to all twenty-four years of interviewing. Nineteen supplemental volumes, including this one, cover procedures, codes and questionnaires for Waves VI-XXIV. Ten volumes of findings entitled Five Thousand American Families--Patterns of Economic Progress are available, covering ten years of PSID findings from 1969 through 1978. Years of Poverty, Years of Plenty by Greg J. Duncan and colleagues, based on PSID data, is also available. This book is an accessible summary of findings regarding poverty and employment dynamics through the late 1970s. A very helpful guide for data users is Martha S. Hill's The Panel Study of Income Dynamics: A User's Guide. This book is the second in Sage Publications' series of guides to major social science databases.

All documentation for the PSID is available from the Inter-University Consortium for Political and Social Research, P.O. Box 1248, Ann Arbor, MI, 48106.

The User Guide

The User Guide to the Panel Study of Income Dynamics, a supplement to the PSID Procedures and Tape Codes volumes, is also distributed by the Inter-University Consortium for Political and Social Research. The Guide clarifies features of the study design and provides information needed to use the panel study data effectively. The guide is in loose-leaf format and purchasers are sent updates to add to their copies.

Staff

Greg J. Duncan, Martha S. Hill, and James M. Lepkowski were the study's principal researchers. Charles Brown was in charge of labor market content. Tecla C. Loup oversaw data collection and processing and compiled the documentation with the assistance of Anita Ernst. Bonnie Bittman supervised family composition editing, Thomas Gonzales supervised income editing, and Anne Sears supervised the coding procedure. Data processing was divided into several parts: Charles Stallman dealt with raw data files and consistency checks, Ron Amos generated variables for the final single-year files, Margaret Hoad processed the family history data, and Marita Servais and Barbara Browne built the merged files. Kathryn Terrazas managed the field production. Joan Brinser and Priscilla Hildebrandt were responsible for general "care and feeding" of and payments to respondents. Deborah S. Laren and Naomi K. Sealand assisted Greg Duncan with data analysis. Jean Yeung assisted Martha Hill with data analysis and sponsor communication, and also kept the bibliography of publications that use Panel Study data. Mary Wreford was an administrative manager. Peggy Gunnesch and Sarah Olson provided secretarial support.
Users who wish to communicate with the study staff regarding questions about PSID data content should contact Tecla C. Loup at (313) 936-0316. The PSID's e-mail addresses are PSID.staff@umich.edu for Internet and USERPSID@umichum for Bitnet.

SECTION I
PROCEDURES FOR THE 1991 INTERVIEWING YEAR

Part 1: The 1991 Questionnaire, Data Processing, Interviewing Procedures, Occupation Codes, Data Quality, Independent Part Samples, Weights

The 1991 Questionnaire

The 1991 questionnaire included a major supplemental questionnaire about the health of Heads' and Wives'/"Wives"1 elderly parents. The supplement's focus was to identify circumstances and arrangements surrounding the decision point when the Head and Wife/"Wife" became aware that their parents were no longer able to care for themselves. The parent health data are available as a separate file. See Part 8 of this section for details.

We continued to ask about marriages, divorces, adopted and natural children. Updating questions were again asked to account for new children and marital changes for those whose data were collected from 1985 through 1990; new Heads and Wives/"Wives" were asked about all of their children and first and last marriages. Employment event dating questions for 1991 continued with the design instituted in 1988 asking about spells with employers instead of the position-oriented approach used from 1984 through 1987, and only information about prior-year employers was asked in detail. The food stamp, mortgage detail and other housing questions, including housing-related services for Heads and Wives/"Wives" age 50 or older, were continued. The massive health status and cost supplements from 1990 had been planned as a one-year supplement only, and so were not asked for 1991.

Data Processing

We continue to use a direct data entry coding system that is fully compatible with the OSIRIS Statistical Software System. PSID tapes are released in OSIRIS format. OSIRIS interfaces with other systems (e.g., SPSS, SAS, BMDP), allowing easy access to other statistical and data management software.

The recontact sample of elderly nonrespondents from 1990 continued to be followed, as did the Latino sample.

Interviewing Procedures and Response Rates

Both SRC field interviewers and the SRC's telephone facility in Ann Arbor administered the 1991 questionnaires.

The average length of the interview for all families was 29.5 minutes. The core sample mean was 27.9 minutes; the Latino interviews averaged 35.5 minutes. (Table 1). Respondents were each paid $15.00 for their inter-

1The PSID uses the term "wife" (in quotes) in referring to long-term female cohabitators.
views and an additional $5 per family for returning an address correction postcard in January 1991.

Core Sample Response Rates. Interviews were taken with 7375 heads of families out of 7595 possible, for an overall response rate of 97.1%. Subtracting from the base 51 respondents who had died since the last interview, had moved into institutions that precluded an interview, were too ill to be interviewed, or had rejoined sample ex-spouses raises the response rate to 97.8%. The interview total includes interviews with 230 splitoffs (out of a total of 267) with a response rate of 86.1 percent. For the reinterview panel only, again with the deceased and others removed from the base, the response rate was 98.2%.

Latino Sample Response Rates. A total of 1988 heads of families responded out of 2213 possible, for an overall response rate of 89.8%. Nine families had died since the 1990 interview, had moved into institutions that precluded an interview, were too ill to be interviewed, or had joined the families of other sample members. Excluding these from the base raises the response rate to 90.2%. This total includes interviews with 110 splitoffs (of a possible 170) for a splitoff response rate of 64.7 percent. For the reinterview panel only, again with the deceased and others removed from the base, the response rate was 92.3%.

Occupation Codes

We continue to use the 1970 Census three-digit occupation and industry codes for the current main jobs of employed Heads and Wives/"Wives." They are also used for the most recent jobs held by Heads and Wives/"Wives" who are not currently working, and in coding the employment histories and extra or second job questions. For comparability with past data, one-digit occupation codes are used to code Head's first job and Head's father's occupation, since these data items were collected only for new Heads in 1991.

Data Quality

About ninety-four percent of all 1991 interviews were taken by telephone (Table 3). The remaining six percent of respondents have no telephones, prefer personal interviews due to party lines or hearing difficulties, or live out of range of our interviewers and complete their own questionnaires. The core and Latino samples showed little difference; 94.2% of core families and 92.7% of Latino families were interviewed by phone. The rate at which Heads responded for themselves (72.1%) declined slightly from 1990; Wives/"Wives" accounted for almost all of the proxy respondents. Again, the core and Latino samples showed little difference; core family Heads responded for 72.7% of the interviews and Latino Heads for 70.0%.

There is very little year-to-year variation in the number of data imputations (Table 5); the quality of the data, according to this indicator, continues to be good.

Tables 2a and 2b show response rates based on original sample individuals, annually and cumulatively. Since it would be impossible to know how many individuals were eligible but did not respond in 1968 for the core
sample or 1990 for the Latino sample, we used the first-year counts as bases for further calculations. The tables also include columns that remove the deceased from the base. Individuals born into the sample are not included in these tables, even though some of them from the core sample are now being interviewed as Heads and Wives/"Wives" of their own families.

Independent Part Samples

The use of part samples is suggested for separating the selection of a preferred model from the assessment of its stability and power. Simple random subsamples are not independent of the rest of the sample because of the clustered nature of area probability samples. Four independent quarter-samples have been selected for users and are designated in the variable V20214. How much of the sample should be reserved for statistical testing depends on how unsure one is about the best model and how important the estimation and testing of one optimal model is felt to be. For illustrations of the results of this separation of the searching from the assessing procedures, see the volumes of findings, Five Thousand American Families--Patterns of Economic Progress, Volume I, pp. 6-8 and pp. 342-344; Volume II, Chapter 9; and Volume IV, Chapter 2 (Survey Research Center, Ann Arbor, Michigan).

Details regarding the generation of this variable for the Latino sample are located in Part 5 of the 1990 (wave XXIII) documentation.

We also include several variables for use in defining paired sampling error computing units within half-sample strata for repeated replication to compute sampling errors. These variables are present for 1991 only at the individual level (V31990-V31999). See Chapter 17 of Vol. IX of Five Thousand American Families, and Section I, Part 5 in this volume.

Weights

The addition of the Latino sample to the PSID has meant that additional weights are necessary. Besides the core sample weight, we have added a weight for the Latino sample and a combined core-Latino sample weight. See Section I, Part 5 in the 1990 (wave XXIII) documentation for details regarding the Latino sample and the creation of the core-Latino combined weight. Refer to the PSID User Guide for a more general discussion of reweighting theory and techniques.

Core and Latino sample weights were updated for marriages and divorces since the prior wave. See Part 5 of this section for more information about updating of weights, including the less simple process for the combined core-Latino weight.

Part 2: 1991 Questionnaire

The 1991 questionnaire with variable numbers from the merged family tape was included in the original published documentation. It is not included in this machine readable version.

You may obtain a paper version of the "1991 Questionnaire with Variable Numbers" by sending a request by e-mail to "psid.staff@umich.edu" or

*Table 5 is based on four variables:
Accuracy of Head's Labor Income (1991: V19130 + V19135)
Accuracy of Wife's Labor Income (1991: V19137)
Accuracy of Asset Income of Head and Wife (1991: V19150)

Overall accuracy is indicated by the number of assignments made during economic data editing in order to impute data missing from an interview. The more assignments, the less accurate the data. The accuracy code values and their meanings are:
0. Adequate response: No assignments made.
1. Minor assignment: Response was inadequate, but estimates could be made within a probable error of under $300 or 10 percent of the assignment by using previous years' data or other data in the interview.
2. Major assignment: Response was inadequate, and estimates had a probable error of at least $300 and at least 10 percent of the value of the assignment, using any information available in previous interviews or in the current one. Usually these values were imputed from an assignment table.
This table shows the sum of the accuracy codes for the three different income measures. The maximum value possible here would be eight for married couples, six for single heads.
Part 3: Editing Procedures and Worksheets

The PSID editing process serves three main purposes: (1) accounting for all year-to-year changes in family membership, (2) rectifying discrepancies within the interview before coding, and (3) calculating and recording numeric data on the worksheets and interviews for coding. It is a complicated task requiring a high degree of accuracy; each interview is checked by another editor.

Family composition editing and occupation coding comprise the first step. Next, an extensive edit of income and work is done. Discrepancies that require additional respondent contact to correct are noted, and each interview with such problems is sent back to the field for additional data collection. Interviews passing through this process are considered "clean" for coding.

The full array of past interviews is available to editors, though only the prior year's interview is usually consulted to solve problems. Prior data are used when the current interview is vague, contradictory, or incomplete despite attempts to clarify the family's situation. Project staff closely oversee the editing process and make substantive decisions regarding the handling of specific problems.

Most of the techniques used to edit previous waves were again used to edit Wave XXIV. However, the addition of employment history questions from 1984 onward provided a new dimension in the editing of work weeks. Specifically, the work hours and employment histories were cross-checked for inconsistencies, and interviews were returned to the field for the resolution of discrepancies. Information on annual work time is probably slightly more accurate than in the past.

Questions were added beginning in 1984 to distinguish time unemployed and looking for work from time out of the labor force, so that measures of unemployment hours are cleaner. Detailed discussion of techniques for editing other variables will be found in A Panel Study of Income Dynamics: Study Design, Procedures, Available Data 1968-1972 Interviewing Years (Waves I-V), Volume I, pp. 270-339. Specific changes since that time have been included annually in Section I, Part 3 of the succeeding documentation volumes.

Family Composition Editing

All people in a panel family at the time of the previous year's interview must be accounted for in the current year. They may remain in the family or may have moved out, died, or entered institutions. Sample members 18 or older who move out and form their own households are followed and interviewed as new panel families (i.e., splitoffs). More detailed relationship to Head and birthdates for individuals have been coded since 1983, and since 1985, we've coded the type of institution for families in the armed forces, educational or health facilities, etc. The marital and childbirth histories collected since 1985 have placed more demands on the task of family composition editing through the addition of a unique individual identifier for each spouse or child mentioned.
Wave XXIV Changes

The extensive edit of income and work remained similar to 1984-1990 procedures. We continued our procedures begun in 1988 for collecting work histories about the prior calendar year and asked little history from January of the current year up until the time of the interview, under the assumption that those data will be included in the following wave.

Assignment Tables

Again in Wave XXIV we did not use inflation factors for our assignment tables, as we had in 1985 and earlier years. The tables were simply created using the unweighted data from the last year (Wave XXIII).

Proration Variables for Income

Variables detailing adjustments to total income for family members who joined or left the family, begun for 1986, continued to be coded. See Section I, Part 3, page 68 in the 1986 documentation for details.

The 1991 edit worksheets with variable numbers from the merged family tape was included in the original published documentation. It is not included in this machine readable version.

You may obtain a paper version of the "1991 Edit Worksheets with Variable Numbers" by sending a request by e-mail to "psid.staff@umich.edu" or by US mail to Jean Yeung, 3263 ISR, University of Michigan, PO Box 1248, Ann Arbor, MI 48106-1248.
Part 4: Coding Procedures

Production coding the questionnaire is the final step in putting the data onto computer tape. This occurs after the questionnaire has been edited as described in Part 3 above. The coding process converts numeric and non-numeric answers into machine readable data.

Coders entered the edited variables and coded the questionnaire using the system designed by the Computer Support Group at ISR's Survey Research Center for direct data entry. The system, Interactive System for Input of Survey Data (ISISD), is compatible with OSIRIS System and has been used by the PSID for ten years. It incorporates wild code and data consistency checking into the coding process. These checks insure that coders cannot enter invalid code values, and thus the necessity of later data cleaning by the Panel Study staff is greatly reduced.

Approximately 10 percent of the interviews (922) were coded twice, once by the coder and a second time by a PSID staff member or a check coder. Check coding consists of an item-by-item check of all data values for a case which have been independently coded by a second person. It enables us to determine early in the processing whether a coder is having difficulty and whether some codes are causing problems.

Coders are trained by a member of the study staff before they are allowed to production-code interviews. Training begins with a short introduction on the history and purpose of the study and a question-and-answer session. The coders code two practice interviews which have been coded previously by a PSID staff member. The coders and the study staff member review the practice interviews in detail, discussing any coding differences with particular emphasis on problems that could arise during production coding and responses that may present coding difficulty.

Coding Differences for Wave XXIV

A difference is a disagreement between coder and check coder. Differences become errors when so judged by the check coder. For example, a coder may use an erroneous code value, enter a wrong digit on the terminal keyboard, or miss a specific direction in the code book. Some disagreements, usually involving coding of open-ended questions, are not errors. In any event, decisions on the final codes chosen rest with the study staff member.

Coding reliability rates were again excellent for 1991. The overall difference rate was 1.83 per case. The error rate was .40 per interview. The questions for why the Head moved (1991: V19389) and why the Head might move in the next few years (1991: V19392) are our most consistently problematic for coding reliability, although the rates are improving. Table 6 shows the reliability rates on these two data items for 1987-1991.

Part 5: Generated Variables, Additional Data and Hot Topics

Various indices and complex measures of economic status have been constructed each year using variables derived directly from coded interview data. Inter-year changes in the interview schedule have made addition and

</tr>
</tbody>
</table>

deletion of indices necessary. In general, if an index could not be built to be exactly comparable to a previous index, it was not constructed.

State and County Codes

Beginning with the release of the 1989 family files, county codes for the current county of residence have been suppressed and those tape locations are filled with zeroes. The codes are available in separate files to qualified users under special contractual arrangements with us. For information about obtaining the special files, contact Terry Adams at (313) 763-6868 or TKADAMS@ISR.UMICH.EDU.

The affected variables are as follows:

The county variables for Head's background, including the counties where Head and parents grew up (1991: V20084, V20086, V20092) are not affected. These variables still contain actual values.

Income and Needs

Several measures of economic status have been generated for all twenty-four years, including money income variables and measures of income adequacy. Family Money Income, one of the simplest indices, is the total of all members' earnings, transfers, and asset income from the prior calendar year (1991: V20175). This variable and its components are adjusted for movers into and out of the family, in that we only include income of non-Heads and non-"Wives" if it was earned during the time that these other family members were present in the family unit. For example, if a mother-in-law moves into the family in the current year, none of her income from last year is included in the income components or totals. If she had moved in during July of last year, then only the portion of income that she had received from July through December is counted in our income variables.

We continue to generate the same annual needs standard (V20182) and income/needs ratio (V20183) that we have since the study began in 1968. This version of needs is described in detail in Section 1, Part 5 of the 1974 documentation and in the tape codes in this volume. The standard was taken from the June, 1967 issue of Family Economics Review and is based on food costs for March 1967 using the USDA low-cost plan, not the "economy" budget used by the Census for CPS. The needs have been adjusted for family composition change since the previous interview to match prior-year income

as explained in the preceding paragraph. Essentially, the PSID calculates twelve separate needs, one for each month of the prior year. Each of these is based on the number, age and gender of the persons in the family during that month using the individual-level data. The values for all twelve months are summed and averaged to create V20182.

This version of needs is still in terms of 1967 dollars. Below are CPI deflators for 1967 through 1993:

Beginning with the 1990 wave, we have generated another needs standard (V20184) and income.needs ratio (V20185). This poverty measure, from the U.S. Bureau of the Census' Current Population Reports, Series P-60, uses family size, age of the householder, and the number of children under age 18 as threshold determinants. Below we have reproduced the table we used for this wave, taken from Table A-2 on p. 195 of the Census Bureau's Poverty in the United States: 1990, Series P-60, No. 175. The income levels are in terms of 1990 dollars. PSID values for these variables were calculated for part-year family membership to match our family income measures, as described in the preceding paragraphs.

Bracket (Interval) Variables

Until Wave X (1977), several numerical variables, such as family money income, had been given also as bracket (interval) codes. Such interval codes had been constructed for most of the measures where a distribution was useful and appropriate. This includes practically all of the income variables and their components. From Wave X onward we have provided two pieces of information in the family-level tape code which allow users to bracket as their own uses dictate: (1) weighted percent of nonzero cases, and (2) weighted mean value of nonzero cases. This information is provided for almost all field amounts.

Labor Market Measures

We collected county labor market information from state agencies through the 1989 wave, but this has been discontinued. Instead we have replaced our variables about availability of unskilled jobs and unemploy-

Sampling Error Computation Unit (SECU) Variables

The 1991 data tape includes variables that may be used for computation of variances under the stratified multistage design (V31998-V31999), as well as variables for balanced half-sample replication (V31996-V31997). These variables are available only at the individual level. Please see the 1983 Documentation Volume, pp. 89-90, for details about SECUs for the core sample.

The development of the Latino SECUs (V31990-V31995) was based on listing area numbers in the LNPS. The exact specifications cannot be released for reasons of confidentiality.
See the tape codes (Section II, Part 2 of this volume) for more information about use of the SECU.s.

Families and Households: Householder

The PSID concept of family has been described in the User Guide. Briefly, we began the study with a definition of a family that was similar to that used by the Census Bureau---the group of individuals sharing a household who are related by blood, marriage or adoption. Like the Census Bureau, we have never treated lodgers, conventional roommates, or live-in employees as members of our families, but we do regard Census "unrelated individuals" as single-person families. We have also followed the Census concept of Head of Household, or householder.

Our following rules dictate that we not only continue to interview the Head in succeeding waves, but also attempt to interview family members who leave to form their own households. A corollary is that returning family members who have been successfully followed are not reintegrated into the family (with the notable exception of recombined married couples.) The result is that we have diverged from the Census definition of family in that several related individuals may share the household but are treated by us as separate families, each with its own family unit Head. The picture is complicated further by our rule that a valid PSID interview must contain an original sample member (or offspring) as the family Head or Wife/"Wife."

In order to minimize the difficulties that our sample design requirements cause for comparisons with Census Population Survey data, we code information about the household member who would qualify as household Head according to Census rules, regardless of whether that individual is a member of our family unit or even a member of the panel at all. Beginning with the 1985 wave, we have included five variables describing the householder (1991: V19017-V19021.) These variables list his or her individual-level identifiers (1968 ID Number and Person Number), age, sex, and relationship to the Head of our family unit. For more information on multiple families within one household, see Linking Data: Families Sharing Households later in this part.

New Heads and New Wives/"Wives"

Two variables indicate the year in which the current Head most recently became Head (1991: V20219) and the year in which the current Wife/"Wife" most recently became Wife/"Wife" (1991: V20220). (It is possible that an individual becomes Head or Wife/"Wife" more than once in the course of the panel due to marital breakups, reconciliations and remarriages.) These variables contain as code values the last two digits of the year in which the background data for Heads or Wives/"Wives" was most recently asked. Most background information was reasked in 1985 for the core sample. Because of this, all core sample Wives/"Wives" answered these data items afresh for the 1985 interview. Therefore, V20220 equals 85 for most core cases. New Wives/"Wives" since then were asked the entire sequence and thus have values in the range 86-91 for this variable. Core elderly recontact and Latino sample Wives/"Wives" were asked the series in 1990, and so have values of 90 unless the family acquired a new Wife/"Wife" in 1991.
New core Heads in 1985 were, as usual, asked the entire sequence (1991: V20083-V20155). For 1985 Heads who were also Heads in 1984, however, only 1985 variables V11924-V11981 were asked. The values for 1985 variables V11907-V11923 were simply transferred from 1984 or earlier years' data, as most of these items should not have changed from year to year. Variable 20219 indicates the year in which these items were most recently collected. Refer also to p. 72 of the Wave XX (1987) documentation for information regarding specific background variables. Latino and core elderly recontact Heads were considered new Heads, so background data are current as of 1990 unless a new Head moved in for 1991.

Education of Head and Wife/'Wife' at the Individual Level

The income and work sequence that we ask for all of last year's family unit members besides the current Head and Wife/'Wife' includes some questions about completed years of schooling. These questions are reasked and coded each year for such individuals (1991: V30700-V30703.) We have generated equivalent data for Heads and Wives/'Wives' for the completed education variable from this series (1991: V30703) from 1976 through the present wave, although their years of schooling and much more education detail are available at the family level (Head: V20117-V20155, Wife/'Wife': V20052-V20078). Beware, however, that their education and other background items are not reasked each year, as completed education is for other individuals. See each completed education variable (V30197, V30226, V30255, V30296, V30326, V30356, V30384, V30413, V30443, V30478, V30513, V30549, V30584, V30620, V30657, V30703) in the individual-level tape code, Section II, Part 2 of this volume for details. The variable descriptions for each year's completed years of education document the variables we used to generate values for Heads and Wives/'Wives' from the family-level data.

Bracketed Education of Head and Wife/'Wife' at the Family Level

Since the study began, Head's and Wife's/'Wife's' education has been available as a single-digit bracketed variable. Beginning with this wave, however, we include in its place the two-digit completed education variable described immediately above. This variable is not comparable with the past years' bracket (1991: V20198 for Head, V20199 for Wife/'Wife') because years spent in nonacademic training are not included in the two-digit total. To create a comparable one-digit bracket, the user must also take into account information from the background variables about whether or not nonacademic training was received (1991: V20065 for Wives/'Wives' and V20136 for Heads).

Family Composition and Sample Member Data

Couple Status of Head (1991: V20218) allows users to easily identify cases with female Heads and husbands at the family level. Additionally, through the coding of relationship to Head in more detail, long-term female cohabitators ('wives') are distinguishable from legally married couples at the family level. Head and Spouse Sample Status (1991: V20221) allows the user to ascertain how the family-level weights (1991: V20243-V20245) have been calculated for each case. The family-level weight is defined as the average of the Head's and the Wife's/'Wife's' individual weights; nonsample individuals have weights of zero.
Weights for 1968-1991

Core Weights. The PSID has two features that require compensating weights. Unequal probabilities of selection were introduced at the beginning of the PSID when the original Office of Economic Opportunity sample of poor families was combined with a national cross-sectional Survey Research Center sample. Compensatory weights were developed in 1968 to account for the different sampling rates used to select the OEO and SRC components of the PSID. In addition, the PSID has lost in each wave of data collection sample persons who refused to be interviewed or were lost to follow-up for a variety of other reasons. Standard survey practice is to develop non-response adjustment factors to account for this loss, especially within subgroups for which it is expected that responses among responding and non-responding individuals should be similar. Under the "missing at random" assumption, the value of data for responding persons is inflated to compensate for those within the same subgroup who failed to respond.

Sample selection in 1968 consisted of sampling OEO households or, in the case of the SRC cross-sectional sample, housing units, with known non-zero probabilities of selection. At each sample unit, all individuals related by blood or marriage were listed to create the family unit for that year. All individuals within the family unit were included in the study, and followed in subsequent years. Thus, the probability of selection for the family unit, which is the probability of selecting the OEO household or SRC housing unit, applies to all individuals within the original sample of households.

The sample of individuals defined by the original sample of households was then followed in subsequent years. A distinction between original sample individuals, all their offspring (i.e., including both those born to or adopted by a sample individual), and nonsample individuals was also made. Only original sample persons and their offspring have been followed. These individuals are referred to as sample persons, and assigned person numbers in a unique range. If other individuals resided with the sample individuals, either in original family units, or in newly created family units, data was collected about them as heads, spouses/long term cohabitators, or other family unit members in order to obtain a complete picture of the economic unit represented by the family unit. However, these nonsample individuals were not followed if they left a PSID family unit.

Sample individuals either stayed within the same family from one year to the next, or they moved out to form new family units. Adult sample individuals were followed, and as they continued in the same family unit, or created new family units, interviews were attempted with the head of the household at each family unit containing a sample individual. Data were collected about family units as well as about individuals, sample and nonsample, in each subsequent year. Analysts could examine either family unit characteristics for sample individuals, family unit characteristics for both sample and nonsample individuals, or they could investigate sample individuals as individual units. Sets of weights were needed for both family units and individuals.

The shift from base sample selection of family units to follow-up of individuals and the family units with which they were associated is
reflected in the way weights have been assigned for the PSID. The 1968 probability of selection was determined for each family unit, and subsequently assigned to each individual in the family unit. A compensatory weight that was inversely proportional to the family probability of selection was created and assigned to family and to each individual in the family. The 1968 individual weight was thus derived from and equal to the family unit weight.

However, every year after 1968 the individual weight was carried forward to each subsequent year, and it was used to determine the weight assigned to the family unit. The individual was the unit followed, whether continuing to stay in an existing family unit or moving to create a new family unit. The probability of selecting the individual does not change from year to year. The probability of selecting the family unit changes as the members of the family unit change. Thus, after 1968 the family unit weight was computed from the weights of the individuals that comprised it.

The weight for sample individuals who were "born into the sample" as offspring of original sample individuals (and in more recent years as offspring of "born-in sample" individuals) was derived from the weight of the parents. The probability of the born-in sample individual being in the sample is, approximately, the sum of the probabilities of the parents. The weight for born-in sample individuals is proportionate to the inverse of this sum of parent selection probabilities. If both parents are sample individuals, the weight for the born-in sample individual is equal to the average of their parents' weights. On the other hand, if one parent is a sample individual and the other a nonsample individual, it is assumed that the nonsample individual had a 1968 probability of being selected that is equal to that of the sample parent. Thus, the born-in-sample individual is assigned one-half the weight of the sample parent (i.e., the average of the known weight for the sample parent and the imputed weight for the nonsample parent, which is assumed to be identical to the sample parent's). Once the weight was assigned to the born-in-sample individual, she or he is handled with respect to weighting just as every other sample individual. Her or his weight is carried forward from one year to the next, and, if she or he becomes head or spouse/long term cohabitor of a family unit, her or his individual weight is used to determine the weight of the family unit.

The family unit weight was created after 1968 by taking the average of the head and spouse/long term cohabitor's individual weights. In a family unit with only a single head (i.e., no spouse/long term cohabitor), and thus a single sample person, the family unit weight is identical to the individual weight. Weights are computed for family units with both a head and a spouse/long term cohabitor using a more complicated method:

a) If the head and spouse/long term cohabitor were both sample members, their weights could, in principle, be the same or unequal. If the

1 In practice, this means the weight of the Head and spouse or long-term cohabitor, although they may not be the child's parents. For example, children born to a daughter while she is still residing in the family unit with her parents receive a weight derived from the Head's and spouse's weight, not the daughter's.
weights were the same, the family unit weight would be identical to the head's (and spouse's/long term cohabitor's) weight. If the individual weights differ, the family unit weight would, as the average of these weights, differ from both the individual weights.

b) If only one of the head and spouse/long term cohabitor pair was a sample individual (the other being nonsample), the weight of the family unit was determined on an assumption about the probability of selection of the nonsample individual. In particular, the probability of selection of the nonsample individual was assumed to be the same as that of the sample individual in the family unit. The family unit now has two identical chances of being selected into the sample, that of the sample person and that assumed or imputed for the nonsample individual. Therefore, the probability of selecting the family unit is twice that of family units with only one or two sample individuals in them. (There are a few rare exceptions to this rule. For example, in a few instances two sample individuals from different family units formed a new family unit; that newly formed family unit also has a probability of selection that is equal to the sum of selection probabilities of the individuals.) Under the assumption of equal probabilities for sample and nonsample head and spouse/long term cohabitor, the family unit probability is twice the probability of the sample individual in the family unit. Therefore, the weight, which is the inverse of the selection probability, is one-half the weight of the sample individual in the family unit.

c) PSID following rules dictate that interviews be attempted with family units only if a sample member is head or spouse/long term cohabitor. The following rules were implemented to make computation of weights easier, and to exclude from follow-up families for which interviewing would be quite difficult. For example, if a sample individual under the age of 16 moves out of a PSID family unit into a family unit consisting entirely of nonsample individuals, no attempt is made to follow that child and interview their new family unit. The PSID implemented a rule that such family units, although part of the PSID sample, were not followable. This rule and several others are consistent with the present rule that interviewers are not to follow and attempt an interview with a family in which neither the head nor the spouse/long term cohabitor are sample individuals.

A few exceptions to this rule were made over the 24 years of the PSID. For example, a few family units had neither a sample head nor a sample spouse/long term cohabitor, but interviews were taken. Weights are assigned to these family units by averaging the weights of all sample individuals residing in the family unit. Thus, it is assumed that nonsample individuals have a probability of selection that is equal to the average of the sample individuals in the family unit. If no sample individuals are in the family unit, the family unit weight is obviously zero; the family unit should never have been interviewed and should not contribute to weighted estimates. The

---

2The 1990 elderly recontact sample contained quite a few individuals who were not sample members but who were followed only because of their
family unit record is retained in the PSID files simply for the sake of completeness.

The PSID weight is comprised of more than an adjustment for unequal probabilities of selection. Adjustments have been made in 1969 and every five years thereafter to compensate for losses due to nonresponse. Non-response adjustments were last made for the 1989 family and individual data. The adjustments made in that year were carried forward to 1990 and will continue to be carried forward through 1992. See the 1989 (Wave XXII) documentation for details about the adjustments.

During the processing of the weights, a number of summary counts of various subgroups that might be of interest to PSID data users were generated for each processing year. A subset of these results are presented in Table 10.

The number of original sample persons started at 18,192 in 1968. Through the years of data collection, additional original sample persons were uncovered through the interviewing process. The last such individual was uncovered in 1979. At present there are 18,224 original sample individuals. Born-in sample (and adopted into sample) individuals appeared in each year of the PSID. Each year from 281 to 482 such individuals have been added. As of 1991 the cumulative total was 9,352 such individuals. This count does not include persons born to sample individuals at a time when they were not responding on the PSID. As with responding individuals, the number of nonresponding individuals has also increased over the years. As of 1991, 9,586 original sample and 2,335 born-in-sample individuals no longer respond to the PSID.

Through 1989, the PSID weights were calculated using floating point arithmetic and many decimal places. For distribution purposes, the weights were constrained to three digits from 00.1 through 99.9. The constraint was imposed to make the weights easier to work with and to limit the number of tape locations occupied by the weights in the data file. Starting with 1990, the distribution weights available in the PSID data files are no longer constrained to be between 00.1 and 99.9. The weights now have a length of six digits with three implied decimal places.

The 1991 core family weight is V20243 on the family file. The 1991 Latino individual weight is V30730 on the individual file.

Latino Sample Weights. The 1990 PSID Latino sample consisted of households associated with all respondents to the LNPS (Temple respondents). The 1990 Temple respondents' households were, to be consistent with PSID terminology, 1990 PSID families. All persons in the Temple respondent's household at the time of the 1990 PSID interview became original sample persons in the PSID. Those persons who were in the 1989 Temple respondent's household but not in the 1990 PSID family were listed as 'movers out' on the PSID coversheet and were not followed. If the Temple respondent was institutionalized (e.g., in jail or prison) at the time of age. These cases, if no sample person is present, have family weights of zero. In 1991, there were 92 such families.

</table>

Just as in the core sample, children born to original sample members were designated as sample members but persons who simply moved into the family were considered nonsample.

The same procedures as those for updating the core family and individual weights were used to update the Latino weight. Weights for those "born into the sample" as children of sample parents were derived from the parents' weights (or head's and spouse's/cohabitor's, if the parent is an other family member). If both parents are sample individuals, the weight for the born-in sample individual is equal to the average of their parents' weights. If one parent is a sample member and the other is not, then the born-in-sample individual is assigned one-half the weight of the sample parent (i.e., the average of the known weight for a sample parent and the
imputed weight for the nonsample parent, assumed to be identical with that of the sample parent) as a 1991 individual weight.

The 1991 family weight was created by taking the average of the head's and spouse's/long term cohabitor's individual weights. If the family unit has only a single head (i.e., no spouse/long term cohabitor), the family unit weight is identical to the individual weight. Weights are computed for family units with both a head and a spouse/long term cohabitor as an average of the head's and spouse's/long term cohabitor's weights. If both the head and spouse/cohabitor are original sample members, then the family weight is identical to the weight of either. If only one of the head and spouse/long term cohabitor pair was a sample individual (the other being nonsample), the family weight is half that of the sample member. The Latino sample family weights were adjusted for nonresponse in 1990. To maintain consistency with the core sample nonresponse compensation, no adjustment for nonresponse was made in 1991 to the family or individual weights. See the 1990 (wave XXIII) documentation for a description of the 1990 Latino nonresponse weights to have gone through the five-year nonresponse adjustments.

The 1991 Latino family weight is V20244 on the family file. The 1991 Latino individual weight is V30731 on the individual file.

The final family and individual weights for Latino sample members in the 1991 PSID are suitable for adjusting for unequal probabilities of selection, nonresponse, and non-coverage for any analysis restricted to the Latino sample. For example, this weight is suitable for an analysis which uses individuals from only one of the Latino groups. It is also suitable for analysis that compares or combines individuals from two or all three of the Latino groups.

The table below is a Latino sample equivalent to Table 10 for the core sample.

The Combined Core-Latino Weight. Many analysts are interested in comparing the Latino groups to groups formed from the core sample. As long as the purpose is to compare the Latinos with samples from the core sample, the Latino weights described in this section are appropriate. If an analyst wishes to create a sample subset that has members from both the core and the Latino sample, neither the core nor the Latino weight is appropriate. A separate "combined weight" was constructed for those analysts who wish to compute estimates based on a sample that combines cases from core and the Latino sample, and this construction process is described below.

The core sample and Latino sample weights described above are not appropriate for analyses that are based on a subset of cases drawn from each of these subsamples with the 1991 PSID. These separate weights for each subsample do not take into account the fact that a few sample members in the core sample could have been selected as part of the Latino sample as well. Nor do they take into account the possibility that many sample members in the Latino sample could have been selected as part of the original PSID in 1968. That is, the joint probability of selection of these "overlapping" core and Latino sample members is not accounted for in the core or Latino sample weights for either families or individuals.

Further, the construction of weights for the core and Latino samples was based on separate procedures that yielded weights with incompatible sums. The core sample weights had, prior to 1989, been constrained to be integer values from 1 to 99 to save tape locations on the very long PSID merged record. Their sum was arbitrary, bearing no direct relationship to the total U.S. population, the PSID unweighted sample size, or any other particular feature of the data. In recent PSID releases, the sum of the PSID weights was typically somewhat larger than 300,000. The 1990 family level Latino weights, on the other hand, were constructed to sum to the unweighted count of Latino families, 2,043. Clearly, creating a subset for analysis that combined cases from each subsample and using the sample weights would lead to disproportionate representation for the Latino sample cases.

For 1990 and 1991, annual combined core-Latino weights were developed. These combined weights can be used for analyses based on samples including cases from both the core and Latino samples. The development of the combined weights involved several steps that are outlined below and in Section I, Part 5 of the 1990 (wave XXIII) documentation. The weight was developed at the individual level and then averaged across all sample persons in the family to obtain the family level weight. The weight development required the calculation of a selection probability for each of the Latino groups in the Latino sample as well as for the core sample.

As in the generation process for the 1990 combined weight, the first step divided the core and Latino samples into a number of subgroups to assist in identifying those cases that could have been selected from both samples. Among the core sample, the following groups were identified:

1. Resident in a non-LNPS county in 1989 or non-Latino
2. Latino and residing in one of the 382 LNPS counties in 1989, in the following areas:
a. Florida (the "Cuban" sample);
b. the Northeast states of Connecticut, Delaware, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, or Vermont (the "Puerto Rican" sample); or
c. any one of the remaining states of the coterminous U.S. (the "Mexican" sample).

The first group consists of core sample persons who could not have been selected for the LNPS sample.

The second, third and fourth groups include a number of 1991 core sample individuals who were not in the study in 1990 because they had joined a panel family in 1991 by moving in or by being born in. In order to determine into which group they were to be classified, these individuals received the area designation of the family into which they had moved.

The core sample weights of those individuals in the first group can, after adjusting for discrepancies in the sum of weights, be used directly in analyses based on combined samples, but any individual in the other three groups could have been selected in the LNPS. Further, their selection probabilities for the LNPS sample depended on which of the states they were residing in, with those in the Cuban sample area having the highest and those in the Mexican sample area the lowest selection probabilities.

The weight for persons in these latter three groups must be a combination of that for core and Latino samples. In particular, the probability of selection of a sample person in these three groups is the sum of the probability of selection for the core sample and the probability of selection for the Latino sample group for which they were eligible, minus the product of those two probabilities. The calculation of the probability of selection for the core and all of the Latino groups is detailed in the 1990 (wave XXIII) documentation.

For the Latino sample, six groups were created:

1. Known eligible for core sample in 1968 and residing in 1989 in
   a. Florida (the "Cuban" sample);
   b. the Northeast states of Connecticut, Delaware, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, or Vermont (the "Puerto Rican" sample); or
   c. any one of the remaining states of the coterminous U.S (the "Mexican" sample).

2. Known ineligible for core sample and residing in 1989 in
   a. Florida (the "Cuban" sample);
   b. the Northeast states of Connecticut, Delaware, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, or Vermont (the "Puerto Rican" sample); or
   c. any one of the remaining states of the coterminous U.S (the "Mexican" sample).

Determination of 1968 core sample eligibility was done in 1990 for all Latino sample members in the study at that time, but those who were new to
the study in 1991 required assignment of this information since we did not include questions regarding individuals' whereabouts in the 1991 interview. For sample members who were born in or "appeared" for 1991 and whose birth year was after 1968, eligibility was determined from 1990 parental information if possible, as per the following rules. If one parent was known to have been in the U.S. in 1968 or if both parents were known not to have been in the U.S. in 1968, then their eligibility was assigned to the new person. If, however, both parents' eligibility was unknown or one was unknown and the other was known not to have been in the U.S., then eligibility was imputed as per the 1990 procedure in such cases. If an individual was born by 1968, then eligibility was always imputed. Details about imputation of 1968 core sample eligibility for cases with missing information in 1990 is detailed in the 1990 (wave XXIII) documentation.

The probability of selection of individuals for the last three groups could be derived directly from the inverse of the current Latino sample weight. Persons in these groups had only one opportunity to enter the PSID, and that had already been accounted for in the Latino weight.

The probability of selection for individuals in the first three groups was calculated as the sum of the core and Latino group probability, minus the product of those probabilities. Calculation of these groups' core probability is detailed in the 1990 (wave XXIII) documentation, but briefly, a single overall selection probability was derived for these individuals. The selection probability for core sample persons is 15,624/238,322,975, or 1 in 15,253. For the Latino sample groups, the calculation yielded the selection probabilities shown in Table 12.

</table>

The probability of selection for each sample person in the first three Latino groups (i.e., core eligible) as well as for the core sample Latino eligible was calculated as for the 1990 data. (Results for all 10 groups, four core and six Latino, are available from PSID staff upon request.) A poststratification adjustment was made to bring the sum of weights into agreement with the Census distribution. In particular, the distribution of the sum of weights across the core and the three Latino groups was 93.38%, 5.19%, 0.42%, and 1.01%, respectively. The Census distribution was 93.06%.

3 An "appeared" individual should have been included in the 1990 family but was not listed until 1991 because the respondent failed to mention him or her during the 1990 interview.
5.43%, 0.42%, and 1.10%, respectively. Adjusting corresponding weights for each of the 10 groups yielded a poststratified weight that matched the overall Census distribution.

Applying the revised weights (which are actually the mean weight within each group) to sample elements results in a sum of weights that is equal to the U.S. population in 1990. These revised mean weights were rescaled to sum to the original sum of weights for the 1991 PSID sample, 335,053.

The combined weight was calculated for each sample person in the combined data set. The following results for the combined eight were obtained by each of the 10 sample groups:

*Non-Latino means ineligible for the LNPS sample. The LNPS sample was restricted to areas deemed likeliest to have Latino populations and only included those of Mexican, Puerto Rican or Cuban descent.

Finally, the combined weight for individuals was averaged across all sample persons in each family to obtain a family level combined weight. This procedure differs from that for the core and Latino weights, as only the Head's and Wife's/Wife's" weights are averaged for family weights.

We recommend that anyone conducting analyses which combine cases across the core and Latino samples use the combined weights. For 1991, the family-level combined weight variable is V20245; at the individual level, V30732. For comparisons of core and Latino groups or analysis of only the core or only the Latino samples, the core (family: V20243; individual: V30730) or Latino (family: V20244; individual: V30731) weights are sufficient to account for unequal selection probabilities and nonresponse.
Linking Data: Splitoffs

From the 1981 wave onward, data have been provided to assist the user in linking splitoff records with those of their main families. The family-level data for each main family in 1991 (V19007=0) contain values for V20222 representing the actual number of successfully interviewed 1991 splitoff families generated from this family. Thus, splitoff nonresponse cases are not included. On each splitoff data record (V19007=1), the family portion of the record contains the current year's interview number (V19002) of the associated main family at V20223. The individual-level record of each member of a splitoff family also contains this interview number (V30722), as well as month and year the splitoff family was formed (V30720 and V30721).

The month and year in which the splitoff family was formed are derived from actual move-out dates of splitoff individuals as reported on the main family coversheets. Thus, in the relatively rare event that two or more individuals move at different times from the main family to form one splitoff family, each individual receives his or her actual date of move as code values for V30720 and V30721. Any other splitoff individuals who did not move out of a main family but simply appeared for the first time in the splitoff family, such as nonsample spouses, friends, miscellaneous relatives and newborn children, receive the move-out date given for the splitoff mover-out. When more than one splitoff mover-out date exists (a rare occurrence), these new persons receive the earlier date.

For those individuals who move from institutions to form their own splitoff families, code values of 98 are inserted into the tape locations for both month and year. The other miscellaneous splitoff family members appearing for the first time in the study receive missing data code values of 99 for these month and year variables.

Linking Data: Families Sharing Households

It is not uncommon for two or more family units to share living quarters. Panel families involved in such a situation may live with persons or families who are not sample members and who are not included by the study as family members because the arrangement is supposedly temporary. The situation resembles that of roommates, where expenses are split between the individuals involved. However, the members of one panel family may also move in with the members of another panel family. Financial disasters such as divorce and unemployment contribute heavily to such patterns of behavior. Most frequently, a former splitoff child, already separately interviewed, returns home to live with panel parents for a period of time until resuming life on his or her own. Occasionally, siblings who are each being interviewed move in together to share an apartment, or aging panel parents go to live with their panel children. We continue to interview each of these smaller groups separately, as if they were living apart.

We provide information to identify situations of multiple family units sharing the same household and to facilitate the linking of PSID family units in the same household. The precise set of variables used for these purposes varies over the course of the study. The variables follow one pattern in 1969-1981, a different pattern in 1982-1985, and a third pattern.
from 1986 on. The variables describing shared-household situations and facilitating linkages in 1969-1981 do not appear in the documentation volumes for those years because they have been added since those data were originally released and the volumes were published. Documentation for them is provided below. The codes for the variables for identifying shared-household situations and linkages in waves 1982 onward appear in the documentation for the respective wave.

Identifying Shared Household Situations from 1986 Onward. The variable for identifying a shared-household situation is Current Household Composition (1991: V19016). The household code not only distinguishes PSID and non-PSID family units sharing a household but also differentiates between primary family units and secondaries. Codes 4, 6, and 8 indicate multiple PSID family units living under the same roof at the time of interview. Codes 5, 7, and 9 indicate that the given PSID family unit is sharing the household with non-PSID family units.

Identifying Shared Household Situations from 1982 through 1985. Identification of shared households in these waves can be accomplished using the Current Family Composition variable (1985: V11117), which in later waves was split into two separate variables (Current Family Composition with fewer codes and Current Household Composition). The codes representing shared-household situations take precedence over codes representing the composition of the given family unit. Codes on Current Family Composition for 1982-1985 distinguish both (a) PSID versus non-PSID units sharing a household and (b) primary versus secondary family units. Codes 4, 6, and 8 indicate multiple PSID family units living under the same roof at the time of interview. Codes 5, 7, and 9 indicate that the given PSID family unit is sharing the household with non-PSID family units.

Identifying Shared Household Situations from 1969 through 1981. To identify shared households in these years, two variables must be accessed: Current Family Composition (1981: V7515) and FU Primacy Within HU (1981: V8111). The Current Family Composition code 5 (described as just "other" in the documentation) indicates a shared-household situation. To tell whether the situation involves sharing with another PSID family unit versus a non-PSID family unit, and to tell whether the given PSID family unit is a primary versus a secondary unit, use the FU Primacy Within HU variable. This latter variable was constructed from originally uncoded data and does not appear in the tape code portion of any PSID documentation. The codes for FU Primacy Within HU are as follows:

1. This family unit is a Primary that shares the household with another family unit that is also interviewed.
2. This family unit is a Primary that either (a) does not share the household with another family unit, (b) shares the household with a family unit that is not interviewed, or (c) is in a situation in which sharing with another family unit was not ascertained.
3. This family unit is a Secondary that shares the household with at least one other family unit that is also interviewed.
4. This family unit is a Secondary that shares the household with at least one other family unit that is not interviewed.
No data for a PSID family unit in this year (family record is filled with zeroes; relevant only when using the family-individual file, as mentioned in the introduction to Part 2 of Section II.)

The variables providing this information are shown in Table 14.

</table>

Linking Shared Household Family Units from 1982 Onward. Beginning with 1982, a set of variables describe and identify each PSID family unit sharing the same household. As many as five PSID family units have lived in the same dwelling unit in most of the recent waves, and so four sets of these variables are included in the data. (The fourth set has no cases for 1991, however, as no 1991 family was sharing with more than three other families.) For each other PSID family unit in the household, the ID number is given as a separate variable labeled ID for first other family unit, ID for second other family unit, etc. (1991: V20224, V20227, V20230, V20233). The ID number variable is filled with zeroes if no other PSID family unit of the specified rank shares the household (e.g., if a family unit shares the household with only one other PSID family unit, then the ID number for the second sharing family unit is '0000'). A measure of the kinship ties with the other PSID family unit in the same household is included (1991: V20225, V20228, V20231, V20234). Beginning with 1985, a measure of family size (1991: V20226, V20229, V20232, V20235) for each other PSID family unit residing under the same roof was added to the set. This information helps analysts select which family units within a given household they will link.

Household ID for Linking in 1969-1981 and from 1986 Onward. The Household ID Number variable (1991: V20236) takes on a common value for all PSID family units sharing the same household. This variable, in conjunction with an indicator of whether the given family unit is living in the same dwelling with other interviewed family units, can be used to link all
PSID family units in the same dwelling. (From 1986 onward, the Current Household Composition variable (1991: V19016) is the indicator; for 1969-1981, use the retroactively constructed FU Primacy Within HU variable described above.) If multiple PSID family units live in the same household, then Household ID equals the lowest value for the current-year family ID number (1991: V19002) of any of the PSID family units in that household. If a family unit does not share the household with another interviewed PSID family unit, then Household ID Number simply takes on the same value as that family unit's ID Number. The Household ID variables for years 1969-1981 are as follows:

Taxes

This year and each year since the 1980 wave, taxes of Head, Wife/"Wife" and other earners have been generated by computer. In previous years they were constructed during the editing process.

The 1985 documentation summarizes in detail the procedures used for calculation of taxes in that wave (1984 tax year). Changes since then are located in Section I, Part 5 of each succeeding documentation volume. We mention here only changes for 1991 (1990 tax year).

Adjusted Gross Income. The procedure for calculation of adjusted gross income (AGI) is similar to last year's, but the taxable portion of Head's (V19170) and Wife's/"Wife's" (V19191) retirement income exclusive of Social Security and Veterans Administration pensions is set at 75 percent of its total.4 Beginning in 1987 tax year, unemployment benefits became

4 This was the ratio, over all income classes, of pension and annuity income in AGI to total pension and annuity income, using preliminary data
Itemizing Deductions and Missing Data. From the 1984 interviewing year through the present, respondents were asked whether they itemized on their federal tax returns (1991: V20011). For those answering yes, we estimate itemized deductions as equal to a given percentage of their AGI, with the percentage varying by the size of AGI. The percentages used this year, shown in Table 16 below, are identical with those for last year.

</table>

These percentages were calculated as the aggregate amounts, by AGI class, of itemized deductions divided by AGI, and were preliminary figures from the staff of the IRS' Statistics of Income Bulletin. The percentages are updated from those used for earlier waves, and the data are for 1990 tax year. The percentage used for those with AGI of less than $15,000 was calculated using only the aggregates for the $10,000-$14,999 group, as too many cases of itemizers with AGI below $10,000 were suspect.

The IRS no longer refers to zero bracket amounts in its tax tables, so beginning with the 1988 wave (for 1987 tax year) we now subtract the larger of itemized deductions or the standard deductions. Standard deduction amounts for those under 65 and not blind are: $3,250 for single persons, $5,450 for married filing jointly.
$4,750 for heads of households and $5,450 for married couples filing jointly.

Although in the past the PSID tax generation procedure has included an adjustment to the standard deduction amount for the elderly and the blind, this was not done for all such cases for 1991. If a Head or Wife/Wife was over age 65 or blind, the tax filing status was married or head of household, taxable income exceeded the standard deduction amount after subtracting for personal exemptions, and was not classified as an itemizer, then tax amounts and marginal tax rates are filled with missing data values (V20162-V20163). This affected fifty-four cases out of 538 possible. In addition, thirty-two other cases were assigned missing data values because hand calculations would have been necessary to compute tax liability. Twenty-five families had missing data for extra earners' taxes. Thirteen first extra earners, seventeen second extra earners, three third extra earners, and one fourth extra earner were involved. Obviously, some families have missing data on more than one extra earner.

The standard deduction for a person who is claimed as a dependent by someone else is limited to $500 or the person's earned income, whichever is greater, but no more than the standard deduction allowed for the dependent's filing status.

The probabilities of itemizing, which can be expected to vary significantly not only with income but also for homeowner, were generated from the 1991 family-level data as shown in Table 17.

The percent itemizers was calculated as the number answering yes to V20011 divided by the sum of the number answering either yes or no. The denominator excluded those not answering or who didn't know whether they had itemized. The percent for those with AGI of less than $5,000 was based only on those whose AGI was also above zero.

Dependents and Exemptions. The allowance per exemption was increased to $2,050 for 1991 (1990 tax year). The IRS changed its exemption rules beginning with the 1987 tax year to eliminate the double-counting of dependents as exemptions for both the dependent's claimers and the dependent's own tax forms. Hence, the number of exemptions can now equal zero.

Filing Status. No changes were made to this procedure.

Marginal Tax Rates and Tax Payments Before Credits. If other family members were present in the family for only part of the year, their incomes represent only that portion for the time they were present. In the 1985 wave, their marginal tax rates were assigned and tax payments calculated by our program using the part-year incomes and, because of the progressivity of the income tax, were somewhat distorted. Beginning in 1986, we incorporated an adjustment to tax liability by applying the percent proration variables (1991: V19276, V19281, V19286, V19291, V19296) to the PSID "Taxable Income" variables. Otherwise, our procedure is identical with that used in 1985.

Tax Credits. The earned income credit increased over last year's. It is now equal to 14% of the first $6,810 of earned income, less 10 percent

of income over $10,730. This credit then cannot exceed $953 and falls to zero at an earned income or AGI of $20,264. The tax credit for the elderly remained the same as last year's.

### Institutionalization

To facilitate analysis of family units living in institutions, a variable (1991: V19023) indicating the type of institution in which the family resides has been included in the data each year since 1985. Thus, the analyst need not employ oblique and imprecise methods to isolate these families, as was formerly the case.

Families who are not in institutions but who have some member in educational facilities, the Armed Forces, prison, or health care facilities might be incurring some financial responsibility for such members. Thus, four variables (V20210–V20213) count the number of members in each of the above-mentioned types of institutions. A very few families may have some members in other types of institutions, such as religious houses. No counting variable was generated at the family level because the number of such cases is negligible.
Population density of the area in which the family lives is a very important item. The urbanicity code (1991: V20192) devised by Calvin Beale and Peggy Ross of the USDA has been added to each wave beginning in 1985. Also, the FIPS system of coding state and county (1991: V20190–V20191) as used by Beale to assign urbanicity was added to the data. We retain our usual state and county codes with 1991 (V19003–V19005). Appendix 1, pages 701–721 of A Panel Study of Income Dynamics, Procedures and Tape Codes, 1985 Interviewing Year, Vol. I, lists the FIPS codes and the ways in which they differ from the PSID's codes.

Please note that county codes for current county of residence, including both the PSID code (1991: V19004) and the FIPS code (1991: V20191) have been filled with zeroes for the publicly released files. See State and County Codes at the beginning of this part (Part 5) for details.

Marriage and Birth Histories--Family-Level Variables

No marriage history variables are included at the family level for 1991, but a few birth history variables are available. We have simply counted the number of children born during calendar year 1990 to Head only (V20237), to Wife/"Wife"/husband of Head/first-year cohabitor only (V20238), to Head and Wife/"Wife"/husband of Head/first-year cohabitor jointly (V20239), and to other family unit members (V20240). These totals are based exclusively on 1991 reports. Much more detail about births and marriages is available at the individual level (see below) and through the Demographic Event History files (see Part 6 of this section).

Marriage and Birth Histories--Individual-Level Summary Variables

The individual-level marriage and birth data available on the 1968–1991 cross-year file (V32009–V32049) contain information from the initial retrospective data collection effort in 1985 through the current wave. Because an individual can age out of updating questions (in the case of births) or become nonresponse, these data are not up to date through the current wave for everyone. Variables are provided to indicate the recency of the birth or marriage information.

The data record for each individual whose marriage and birth histories were collected--a Head, Wife, "Wife", or other FU member age 12–44 at any time during the 1985 through the 1991 waves--contains birth dates of the oldest and the four youngest children (V32023–V32032), as well as the total number of births (V32022). Births to this individual are current as of the wave indicated in V32021. Marriage data include the total number of marriages (V32034), month and year dates, and separation, widowhood and divorce events of the first and last marriages (V32035–V32048). The last known marital status of the individual (V32049) is included, as is a variable for the wave in which the marriage data were most recently gathered or updated (V32033).

Data are also provided about the individual's parent if birth and marriage histories were collected for the parent at any time from 1985 through the current wave and the individual is reported as a birth in the parent's
birth history. The parental variables include identifiers for the parent (mother: V32009 and V32010; father: V32016 and V32017). (Mother identifiers are present in the data records of some individuals who were not reported as births in any female's birth history collected from 1985 onward. These identifiers were coded during 1983 and 1984 data processing from uncoded information for individuals who were present in 1983 or 1984 families. No information about the mother other than her identifying information is provided in such cases.) The parental variables also include parent's year of birth, total number of children, and where the given individual ranks in the birth order of the parent's children (mother: V32011-V32013; father: V32018-V32020). Birth weight of the individual (V32014) is also derived from a parent's birth history data. If the mother's birth history was collected, then birth weight is taken from her birth history report, but if just the father's birth history was collected, then the values are taken from his birth history information. The variables indicating each parent's total number of children and rank order of this individual in that total are current through the most recent wave in which birth history was collected for that parent. Detail about all children is available on the 1985-1991 Childbirth and Adoption History file. Comprehensive data on marriages of the given individual and the parent are available on the 1985-1991 Marriage History file.

Part 6: The Demographic History Files and 1968-1985 Relationship File

Several special public-release files contain detailed information collected by the PSID that would be cumbersome to store on the study's main files. Hence, the details have been relegated to special files and the information presented in a summarized form on the main files. Analysts wanting complete details on these topics must turn to the special public-release files. These files may have some stand-alone uses and contain some of the same information as the main files, but they are of greatest value if merged with the main PSID data. The special files are obtainable through ICPSR; see Part 9 of this section for information about whom to contact.

Demographic History Files. Each year since 1985, the interview has contained questions about a number of demographic events asked of PSID family members eligible for such events. The events include childbirth, adoption, marriage, separation and divorce. Retrospective histories of substitute-parenting activities were also collected in one wave--1985. Since the full detail on the various demographic events is desired by only a relatively small subset of potential data users, but a sizable number of data users may want some of the detail, we disseminate two types of data products. One is the addition of individual-level summary variables to the main PSID data file, discussed under Marriage and Birth Histories--Individual-Level Summary Variables in Part 5 of this section and documented in Section II, Part 2. The other data products are special publicly-released, fully documented files containing all present-year and past-year detail of collected demographic history information.

One of these files, the 1985 Ego-Alter file, contains all of the demographic history detail collected in the 1985 wave. A record on that file represents a pair of individuals related by marriage, childbirth, adoption, or substitute parenting (one of the variables indicates the type
of record--marriage record, childbirth record, adoption record, or substitute-parenting record). The demographic history detail from the 1985 wave is based on comprehensive retrospective histories collected at that time. It includes detail about the timing and circumstances of the demographic event relating the pair of individuals--parenting or marriage--up to and including 1985. The 1985 Ego-Alter file contains 41,368 records, has an LRECL of 82, and occupies 3.3 megabytes.

Since then, updates to this information, as well as retrospective histories for those new to the study, have been collected. These files cover marital events or childbirth and adoption events and build from the 1985 Ego-Alter file, adding events reported since 1985. The files are known as the Marriage History file and the Childbirth and Adoption History file. Like the 1985 Ego-Alter file, they follow a one-event-per-record format (each record represents a pair of individuals related by the event specified in the file's title--marriage, childbirth or adoption). They differ from the 1985 Ego-Alter file in that (1) separate files are created for the different types of demographic events; (2) individuals reporting zero events of the specified type are included on the files (they were not included on the 1985 Ego-Alter file); (3), reports of post-1985 events are recorded, as are events from retrospective histories reported for individuals entering the PSID since 1985; and (4) they do not include substitute parenting events. The current set of these demographic history files covers 1985-1991 information and is now publicly available.

The 1968-1985 Relationship File. The 1968-1985 Relationship file was released to ICPSR in October 1992. This file identifies the blood, marital, or cohabitational relationships between each pair of individuals who were members of family units that descended from a common original 1968 family unit. The records include variables that identify the relationship of the pair in each of the eighteen years 1968 through 1985. Also included are sets of coresidence and PSID status variables designating whether each individual was present in a responding household for each of the eighteen years, and a modest number of variables serving as identifiers and basic demographic measures--age and gender. The file contains two records for each pair of individuals--one record identifying the 1968-1985 relationships of the first person to the second person and a second record identifying the 1968-1985 relationships of the second person to the first person.

The relationship file was designed to clarify certain relationships between individuals co-residing in a given year, for example, to distinguish stepchildren from biological children and, when both are living in their grandparents' household, cousins from siblings. It also provides information about the relationships of individuals who live in different family units in a given year. Relationships between persons living apart are focal to issues such as child support by non-custodial parents or support of frail parents in nursing homes. Used in combination with the extensive information available in the PSID's 1968-1985 cross-year file, it offers the opportunity for rich analysis of living arrangements of individuals and families.

The 1968-1985 Relationship file contains 426,680 records, has an LRECL of 552, and occupies 235 megabytes.
Part 7: The Work History Supplement Files

The employment histories with event dating include a fairly large amount of data for some Heads and Wives/"Wives" who experienced several job changes. Thus, inclusion of all the data in each year is not feasible for the main files. Cross-year tapes were created for all Heads and Wives/"Wives" in any year from 1984 through 1987. These tapes contain the additional employment history data, if any, as well as the complete family-level record and include a complete record for each Head and each Wife/"Wife". For married couples, the family-level data are duplicated for the two persons. Unlike most PSID special files, the Work History Supplement files are stand-alone data files, complete unto themselves. The 1984-1987 Work History file, to take an example, contains 12,620 records, has an LRECL of 9,566, and occupies 120.7 megabytes.

Work history questions were extensively revised beginning in 1988. Their orientation is employer-based rather than position-based, as in 1984-1987. Current year information on weeks spent working, unemployed, and out of the labor force is no longer available. Extra-job questions are more extensive, with the addition of month and year the extra employment began and ended. At this time, our plan is to release a complete cross-year file of all work history data from 1984 through 1992, with documentation explaining the differences between 1984-1987 and 1988 onward.

Part 8: 1990 Self-Administered Questionnaire (SAQ), 1990 Telephone Health Care Cost Questionnaire (THQ) and 1991 Parent Health Supplement (PHS)

As part of the 1990 interviewing effort, funds were granted to Lee Lillard of the Rand Corporation from the National Institute on Aging to supplement the PSID with data about older panel members in the core (but not Latino) sample. This resulted in question additions to the main questionnaire about housing for the elderly and two supplemental data files about Head's and Wife's/"Wife's" health:

1. Each 1990 Head and Wife/"Wife" age 50 or older was mailed a self-administered questionnaire. The questions asked about the respondent's health, health care coverage, long term care coverage, and asked permission for the PSID and the Rand Corporation to obtain Medicare claims information from the Health Care Financing Administration. Details about these data are included in a separate document, A Panel Study of Income Dynamics: Procedures and Tape Code, 1990 Interviewing Year (Wave XXIII) 1990 Self-Administered Questionnaire: A Supplemental File.

2. A long series of questions about health care costs was asked as part of the regular telephone interview for Heads and Wives/"Wives" age 65 or older. This series of questions is documented in A Panel Study of Income Dynamics: Procedures and Tape Code, 1990 Interviewing Year (Wave XXIII) 1990 Telephone Health Care Cost Questionnaire: A Supplemental File.

Details about each of these supplements are also documented in the 1990 Documentation volume.
The 1991 Parent Health Supplement (PHS)

In 1991, the PSID asked an extensive questionnaire supplement about parents of Head and Wife/"Wife". Because of the supplement's length, it is available as a separate data file.

The supplement focused on circumstances and events at the time when a parent was no longer able to care for him or herself. To be eligible, at least one parent had to be living and age 70 by May 31, 1991 or deceased no earlier than 1980 and age 70 at death. Since screening all Heads and Wives/"Wives" to determine whether parents qualified for the supplement would have been lengthy and wasteful of precious interviewing time, PSID data from the 1988 Time and Money Help Supplement, which asked, among many other things, about age and sentience of parents, was used to "prequalify" them. A variable indicating the predetermined eligibility from the 1988 data is at the individual level (V30726). Indicators of supplement receipt exist at the family level (V20241 for Heads and V20242 for Wives/"Wives"), as well as at the individual level (V30727).

The PHS data structure includes one record for each 1991 Head or Wife/"Wife" who had an eligible parent and who consented to the supplement. Thus, if a consenting Head and Wife/"Wife" each had eligible parents, two records exist on the supplemental file—one for each pair of parents.

The PHS data records can be matched to the main family file using the main file variable 1991 Interview Number (V19002) and the Parent Health Supplement (PHS) variable V2, 1991 Interview (ID) Number. The PHS itself contains a variable (PHS V10) that indicates whether the supplement data record concerns Head's parents or Wife's/"Wife's" parents. Further details about the PHS are located in A Panel Study of Income Dynamics: Procedures and Tape Code, 1990 Interviewing Year (Wave XXIV) 1991 Parent Health Questionnaire: A Supplemental File.

Part 9: Data Available

For each year of this study through the 1989 wave, single-year family-individual and family files were created. In addition, family-level data were merged across waves to create two-through twenty-two-year cross-year family-level files. Cross-year family-individual data files were created on a five-through twenty-two year basis. These files contain all individuals who were response in the most recent year. Additionally, beginning in 1984, we created much expanded annual versions of the family-individual data that included all individuals ever in the study; that is, data for all currently nonresponse individuals were available as separate files that could be concatenated with the response data.

Beginning with the 1990 wave, we were forced to revise our structure considerably because of computer system limitations—our tape locations were approaching 32,767 with the addition of the 1989 data. The data are no longer merged on a family-individual basis; instead, we produce a cross-year individual file and twenty-four single-year family files. The individual file includes both response and nonresponse individuals. For details about the file structure and filebuilding examples, see Part 10 of this section.
For a more detailed description of all of the tapes, see the User Guide to the PSID. Two tapes were also created using the 1967 S.E.O. data for the part of the sample that was originally interviewed by the Census, and a 1990 Latino Early Release file that includes some LNPS variables is also available.

Employment histories for 1984-1987, the 1985 Ego-Alter file, the 1985-1991 Childbirth and Adoption file, the 1985-1991 Marriage History file, the 1968-1985 Relationship file, the 1990 Self-Administered Questionnaire, the 1990 Telephone Health Care Cost Questionnaire and the 1991 Parent Health Supplement are also available. Refer to Parts 6 through 8 above for brief descriptions.

All inquiries for information about this study should be made in writing to: Member Services, Inter-University Consortium for Political and Social Research, Institute for Social Research, University of Michigan, P.O. Box 1248, Ann Arbor, Michigan 48106. Refer to ICPSR study number 7439, and please specify which datasets you need.

Machine readable documentations for all of the family and individual data are available upon special request. For 1991, this consists of a set of 29 files: one each for the 24 waves of family-level data 1968 through 1991, one for the cross-year 1968-1991 individual file, and one each for the following four indexes: the Family Alphabetical Index, the Individual Alphabetical Index, the Family Numerical index, and the Individual Numerical Index. These 29 files contain everything from the printed versions except pre-1991 versions of cross-year individual data and indexes, and the pages containing each year's questionnaires and editing worksheets. The questionnaires and worksheets can be obtained through ICPSR by special request.

The CD-ROM

Historically, PSID data files have been released through the Inter-University Consortium for Political and Social Research (ICPSR) on magnetic tape. For cross-year waves 1968-1987 and 1968-1988, the ICPSR released a field-test CD-ROM version of the rectangular cross-year family-individual response and nonresponse files. An ASCII version of these two files was mastered onto two CD-ROMs: the response file on one, and the nonresponse file on the other. SAS and SPSS-X program files were placed on the CD-ROMs to facilitate retrieval of data for users of those statistical software systems.

The 1968-1989 and 1968-19915 CD-ROM versions of the data are mastered onto only one disc and are formatted differently. Essentially this new file format consists of separate single-year files for family-level data (e.g., 24 family files for 1968 through 1991), and one cross-year file for individual-level data.

5 Since the completion of the 1991 data followed so closely upon the heels of the 1990, we skipped the release of a 1968-1990 CD-ROM and proceeded directly to the 1968-1991 version.
Each family file contains one record for each family interviewed in that year. The records in each file are identified by the family ID for that year, i.e., usually the second variable in each year's record--in 1984, for example, the family ID is V10002; for 1991, V19002. The records are in sort order by this ID and contain the family-level variables for that year.

The cross-year individual file contains one record for each person ever in a PSID family (i.e., both response and nonresponse individuals). The records in this file are identified by the 1968 family ID and person number (V30001 and V30002) and are in sort order by those variables. The file also contains the family ID (e.g., for 1984, V30429; for 1991, V30689) of the family with which the person was associated in each year and contains all individual-level variables for 1968 through 1991.

SAS and SPSS-X program files are also included on this CD-ROM, as mentioned above for the earlier versions.

Please contact ICPSR as described in Part 9 above or the ICPSR representative at your institution for further information.

The Internet

Now users can download the 1968-1991 family files, the 1968-1991 individual file, the 1985-1991 marriage and fertility history supplemental files, the two 1990 health supplement files (the SAQ and THQ), and the 1991 parent health supplement file (PHS) from the PSID homepage on the World Wide Web. PSID bibliography and documentation are also available. We plan to release updates to our data and documentation regularly on the Internet. This is currently and will continue to be the source for our most recent data releases, updates and news.

To access the PSID homepage, one needs a computer, a Web browser and a connection to the Internet. Free Web browsers that run on Windows, MacIntosh and UNIX computers are available. Mosaic, Netscape, Net cruiser, Winweb, and Cello are the names of a few browsers that can access PSID data. PSID staff use Netscape, which was selected as the editor's choice at PC Magazine. Others will work as well but may not look as nice. One can download the most recent version of Netscape via anonymous FTP at:

ftp.mcom.com/netscape

Many Universities and businesses have direct connections to the Internet. Ask your system administrator if yours is one of them. If not, there are many local dial up services that allow you to dial in to Internet connectivity. These providers can be expected to be much slower than a direct connection.

Once you are connected to the Internet, the rest is very easy. Your software may provide a Window or menu option for a Uniform Resource Locator (URL). It is really asking you for the location of the computer that you want to connect to. The URL or location of the PSID homepage is:

http://www.umich.edu/~psid/
The PSID homepage is a hypertext document, i.e., some text will be
different, either in color or in boldness, from others. If you click on
the colored hypertext, you will see more about that topic. We recommend
that you check out our What's New item to see what new data we are releasing
and other things of note. Your reaction to the PSID homepage is
solicited and appreciated. Send electronic mail regarding same to bres-
san@isr.umich.edu.

Part 10: Creating Datasets from the Single-Year Family and the Cross-Year
Individual Files

The PSID no longer releases merged cross-year files. As we mentioned
in the 1989 documentation, our highest tape location for the 1968-1989
merged cross-year family-individual file was 32,759--precariously close to
the limit of 32,767 for most computer systems.

The traditional cross-year family-individual files have been replaced
by single-year family files and a cross-year individual file. The twenty-
four single-year family files (one for each year of the study from 1968
through 1991) contain all of the family-level variables collected in each
wave. Each of these family files has one record for each family inter-
viewed in that wave.

The cross-year individual file contains all twenty-four years of
individual-level variables collected from 1968 to 1991, and each individual
has his own record. Both current-year response and nonresponse persons are
included. The file contains an interview number for the family to which
each person belongs together with information unique to that person. That
is, each member of a family has a family Interview (ID) Number whose value
is identical with the values of that data item for all the other family
members in that family. In addition, each individual is assigned a unique
sequence number, which indicates the person's position and status for any
given year's list of family members. Thus, the first person listed, always
the Head of the family, is 01, the second person listed is 02, and so on.

This new file structure is used on both the CD-ROM and the tape files,
and will be used for all files in future years.

Creating Cross-Year Family-Individual Files

As mentioned above, each single-year FAMILY file contains one record
for each family interviewed in the specified year. The records in each
file are identified by the family Interview Number for that year, in sort
order by that variable, and contain the rest of the family-level variables
for that year.
The cross-year INDIVIDUAL file contains all individual-level variables for 1968 through 1991 and includes one record for each person ever in a PSID family up to and including the current wave. The records in this file are identified by 1968 family ID (V30001) and Person Number (V30002) and are in sort order by these variables. The file contains the Interview Number of the family with which the person was associated in each year after 1968, as well.
Assembling a Cross-Year Family-Individual File

Few users will want to analyze the full data file for all persons ever in the study, and so your first step is to decide which variables, individuals and waves of data interest you.

The root principle in any merge of family data with individuals involves a match of the two files using yearly Interview Numbers for the wave(s) in which the chosen family variables were collected, and so these variables for Interview Number must be retained as part of any subsetted data, either family or individual. The chart below shows the annual variable numbers for the single-year family and cross-year individual files.

Not all cases in the cross-year individual file have a matching record in a given single-year family file. This happens when an individual who was part of a responding family has moved away or died and is no longer associated with any family in the study; the person is said to be nonresponse. The nonresponse person's Interview Number in the cross-year individual file is filled with 0s (as are the other variables) for a wave in which no data were collected about him or her.

We can think of several approaches to creating a cross-year family-individual file from the components. Two good ones are illustrated below.

Method 1. First select individuals and variables from the cross-year individual file and then match those data, using a one-to-many match, with the desired variables from a single-year family file. (Remember to retain the yearly Interview Numbers from all files when subsetting.) Next, match the resulting file (which now contains selected variables from the cross-year individual file and the first family file) with a second family file. Repeat with additional single-year family files until all required family data are obtained and merged with the cross-year individual data, as the diagram below shows. See the SPSS-PC and SAS-PC setups below for examples using this approach.

+---------------------------+ +-----------+
|1st Family | |2nd Family |
|+ 1968-1991 Individual | | File |
+---------------------------+ +-----------+

STEP 2: Match on second yearly ID Number

+---------------------------+ +-----------+
|1st Family + 2nd Family| |3rd Family |
|+ 1968-1991 Individual | | File |
+---------------------------+ +-----------+

STEP 3: Match on third yearly ID Number

+---------------------------+ +-----------+
|1st Family + 2nd family + 3rd Family| + 1968-1991 Individual |
+---------------------------+ +-----------+

Method 2. Alternatively, first do a series of one-to-many matches of a single-year family file and the cross-year individual file matching on that wave's Interview Number. Be sure to retain the 1968 Interview Number (V30001) and Person Number (V30002) from the individual file on each family-individual output file. The resulting single-year family-individual files are then merged in a one-to-one match using the 1968 Interview Number and Person Number.
Figure 4

MULTIPLE FAMILY-INDIVIDUAL FILES

<table>
<thead>
<tr>
<th>1st Interview Number</th>
<th>2nd Interview Number</th>
<th>3rd Interview Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st Family-Individual File</td>
<td>2nd Family-Individual File</td>
<td>3rd Family-Individual File</td>
</tr>
<tr>
<td>68-91 In-</td>
<td>68-91 In-</td>
<td>68-91 In-</td>
</tr>
</tbody>
</table>

Step 1: Match on 1st Interview Number
Step 2: Match on 2nd Interview Number
Step 3: Match on 3rd Interview Number

Step 4: Match on 1968 ID Number and Person Number

Cross-year Family-Individual File

PSID Dataset Construction with SAS and SPSS

The examples below illustrate how one can assemble a cross-year family-individual file from the cross-year individual file and five single-year family files, 1986-1991, with Method 1 described above. The setup can be easily modified to merge family data from additional years.

SAS and SPSSX statements provided in the SAS and SPSS subdirectories on the CD-ROM can be used to help construct setups.

As we mentioned in the general assembly pointers above, some individuals do not have a matching record in one or more of the family files because of nonresponse. (Nonresponse individuals' yearly ID's are zeroes for the nonresponse years.) Failure in matching these cases with a family record causes both SPSS and SAS to fill in system missing values for these cases. In SPSS-PC runs, a warning message about "DUPLICATE KEY of 0 EN-COUNTERED" will be issued but can be ignored. SAS-PC issues no warning messages for the nonmatching records.

Performance for individuals will depend upon the equipment being used and the number of variables and cases being extracted. When first debugging a setup, the user should consider limiting the number of observations (cases) in the test runs to 10 or some similar small number. This will hasten the checking of setups for errors.
SPSS-PC Example

This section provides SPSS-PC setups for creating a cross-year family-individual file from the cross-year individual file and five single-year family files. The examples show the steps for creating a file containing selected individual-level variables and family-level variables from the 1987 through 1991 family files for those who were ever the Head or the Wife/"Wife" in a PSID family between 1987 and 1991.

All lower-case material should be replaced with appropriate file or variable names to suit your particular purposes. All intermediate files can be created as temporary working files. The internal files created here are compressed in this example to save space.

SAS-PC Example

This SAS-PC example demonstrates how a subset of the PSID cross-year family-individual file can be assembled with the cross-year individual file and single-year family files. This example assembles data for an analysis focusing on income changes between 1986 and 1990. The sample includes only those who were ever Heads or Wives/"Wives" in any year between 1987 and 1991, since in each wave income is collected for the prior calendar year. All lower-case material should be replaced with appropriate file or variable names to suit your particular purposes. All intermediate files can be created as temporary working files. The internal files created here are uncompressed in this example, although SAS for Windows (version 608) and SAS/UNIX (version 609) do have compression features. Individual users can use these features if their versions so allow.

/*

Assembling a Cross-Year Family File

As we have already said, each member of a family has a family ID number for each wave with a value identical to the values of that data item for all the other family members in that family that year. In addition, each individual is annually assigned a unique sequence number, which indicates the person's position and status for any given year's list of family members. Thus, the first person listed, always the Head of the family, is 01, the second person listed is 02, and so on. To create a current cross-year family-level file, select from the cross-year individual file those cases where V30690 (1991 Sequence Number) is equal to 01, since each family must have at least one member, although it may or may not have more. Then merge data from the single-year family files using the yearly ID num-

6Variable V30690, Sequence Number, must be used instead of V30691, Relationship to Head, because although each family has one and only one current Head (i.e., where V30690 = 01-20 and V30691 = 10), it is possible that the prior year's Head has moved out since the previous interview and a new Head is present for the current interview. Relationship to Head for movers-out is coded with reference to the previous year's Head, so for both the current Head and the previous Head, V30691 = 10.
bers to match as described in Method 1 or 2 above. These instructions create a merged 1968-1991 family-level file for currently responding families.

For other years' cross-year family-level files, the Sequence Number variable for the latest desired year of data should be used and merges done with the appropriate single-year family files. Again, this produces a file of families who were response through the latest year and eliminates families who had already become nonresponding. See the User Guide for more detail.

Single Year Files

Producing single-year family files for cross-sectional analysis is simplicity itself. Simply use the single-year file. Single-year family-individual files are also relatively simple. Select all individuals whose Sequence Number for the desired year is nonzero and match the Interview (ID) Number for that year from the individual file with the Interview Number from the corresponding family file. The Interview (ID) Numbers for family and individual files are listed in Assembling a Cross-Year Family-Individual File above.

Part 11: PSID User Guide

The PSID staff completed a User Guide to the panel study in 1984. The volume was designed to supplement, but not replace, the documentation volumes issued for each year's data. It is published in a loose-leaf form, so that updates can easily be made. Chapters in the User Guide include PSID history, sample composition and weighting, how to deal with family composition and change, structure of the data tapes, study content, and other topics of interest to users. The User Guide is included with the set of documentation volumes that accompany an order for PSID tapes. It can be ordered separately as well. The Guide is scheduled for revision, but we have not yet set a completion date. The major drawback to the current edition is that it does not take into account the inclusion of data for currently nonresponse individuals, and so statements such as that regarding the ability to recreate single-year family data for prior waves are inaccurate. We recommend instead that users consult Martha S. Hill's The Panel Study of Income Dynamics: A User's Guide. This book is the second in Sage Publications' series of guides to major social science databases. Sage's order number for the hardbound edition is 46090; for a paperbound copy, 42303.
SECTION II
TAPE CODES FOR WAVE XXIV

Part 1: Twenty-fourth-Year Family-Level Tape Code

The following is the codebook for the twenty-fourth wave of family-level data from the interview schedule. The twenty-four-year individual-level codebook can be found in Part 2 of this section. The variable numbers and tape locations refer to those on the 1968-1991 cross-year tape. For family-level codes for the first five waves of this study, see A Panel Study of Income Dynamics, Volume II, Section II. The remainder of the family-level codes for Waves VI through XXIII will be found in successive volumes entitled A Panel Study of Income Dynamics: Procedures and Tape Codes. The distributions for the following variables are weighted based on all families interviewed in 1991, that is, using the combined core-Latino family-level weights (V20245). To generate distributions on field amounts, percent nonzero and mean nonzero values are provided for relevant variables, again using family-level weights.

Tape Code Information

The example below illustrates the information contained in this codebook for a typical variable. The numbers in brackets do not appear in the codebook, but refer to the explanations which follow this example.

[1] Indicates the cross-year variable number. A variable number is assigned to each item in the study. (See the introduction to the numerical index, Section III, Part 1 of Volume II, for a list of the range of variable numbers specific to each year.)

[2] Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. This abbreviated variable name is identical to the variable name
listed in the OSIRIS dictionary for this variable. It is also listed as a subheading in the printout when a variable is accessed in an OSIRIS program. When used in this manner, the abbreviated variable name can be useful as a cross-reference tool, as well as a way to avoid errors. Refer to the following list of abbreviations for help in translating the names into sensible English.

[3] Indicates the starting location and ending location for this variable when the data are stored on a magnetic tape in the OSIRIS format.

[4] Indicates the code value for missing data. In this example, code values equalling nine are missing data (MD=9). Alternative statements for other variables are "MD=0 or GE 8" or "MD=GE 7." In cases where nothing is printed in this space, missing data are not permitted for the variable; either values were assigned for such cases or missing data were impossible.

Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to exclude from analysis can be designated as "missing data," e.g., inappropriate, unascertained, or ambiguous data categories. Although these codes have been defined by the PSID staff as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.

[5] Indicates the full question number that was used in the questionnaire, as well as the exact wording of the questionnaire item; for variables not coded directly from the questionnaire, such as generated data, an appropriate title appears here.

[6] Indicates the unweighted family-level N for each code value. Blanks indicate that no cases have this value.

[7] Indicates the weighted percentages for each code value, computed using family-level case counts and weights. Blanks indicate that no cases have this value.

[8] Indicates the code values occurring in the data for this variable. For variables containing field amounts, refer to the notes appearing directly below items [10] and [11] for the range of data values.

[9] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are "DK" (Don't Know), "NA" (Not Ascertained), and "Inap." (Inappropriate).

[10] Indicates the "% nonzero" value, where specified. These are weighted using family-level case counts and weights.

[11] Indicates the "mean nonzero" value, where specified. These are weighted using family-level case counts and weights.
List of Standardizations of Common Abbreviations Used by the Panel Study in Generating Variable Names with OSIRIS (see item 2 above)

ACC . . . . . . . Accuracy
ACCT . . . . . . Account
ACUM . . . . . . Accumulate
ANN . . . . . . . Annual

STAT . . . . Status
STD . . . . Standard
SUBSDY . . . Subsidy
SUPP(S) . . . Support; Supplement(s)
SUPR . . . . Supervise(e/or)
TOT . . . . . Total
TR Y . . . . Transfer Income
TX . . . . . . Tax
TXBL Y . . . Taxable Income
U . . . . . Section of questionnaire (Section D or G) applying to those who are currently unemployed and looking for work
UN . . . . . Union
UNEMP . . . Unemployed; unemployment
UNINCORP . . Unincorporated
UTIL . . . . Utility; Utilities
VAC . . . . . Vacation
W or WF . . Wife
WELFR . . . Welfare
WHR . . . . Where
WK . . . . . Week
WRK(D) . . . Work(ed)
WRKG . . . . Working
WRKHRS . . . Work Hours
WT . . . . . Weight
WTR . . . . . Whether; if
X . . . . . . Times; cross (as in cross-year)
XPCT . . . . Expect
XTRA . . . . Extra
Y . . . . . . Income
# . . . . . . Number (of)
### 1991 FAMILY TAPE CODE

V19001  'STUDY NUMBER (714) '  TLOC=  1-  3

Study Number 714 (Wave 21)

V19002  '1991 INTERVIEW NUMBER '  TLOC=  4-  8

1991 Interview Number

The range of values for this variable is 00001-09363. Latino sample cases were integrated into the core sample, i.e., they do not have a unique range of numbers.

V19003  'CURRENT STATE '  TLOC=  9- 10  MD=99

State of Residence at Time of 1991 Interview (PSID Code)

Please refer to Appendix 1, Wave XIV documentation (1981 data), for state codes.

99. NA

V19004  'CURRENT COUNTY '  TLOC=  11- 13  MD=999

County of Residence at Time of 1991 Interview (PSID Code)

This variable is suppressed (filled with a field of zeroes) in the public release files to protect the anonymity of respondents. The codes are available in separate files to qualified users under special contractual arrangements with the PSID; for more information, contact Terry Adams at (313) 763-6868 or (BITNET) user HCAA@UMICHUM.

V19005  'CURRENT STATE+CNTY '  TLOC=  14- 18  MD=99999

State and County of Residence at Time of 1991 Interview (PSID Code)

Please refer to Appendix 1, Wave XIV documentation (1981 data), for state codes. V19003 and V19004 are combined here into one variable; the first two digits represent the state code and the last three, the county. See the note at V19004 above regarding suppression of county codes.

V19006  'SIZE LGST CITY/COUNTY 91'  TLOC=  19  MD=9

Size of Largest City in County of Residence

72 0.9 9. NA; household is outside USA

V19007 'SPLITOFF INDICATOR 91' TLOC= 20

Splitoff Indicator: Color of Coversheet

9,023 96.9 0. Green (Reinterview Family)
340 3.1 1. Yellow (Splitoff)

V19008 'WHETHER REFUSED 91' TLOC= 21 MD=9

Whether Initially Refused in 1991

9,263 99.2 0. Never refused
100 0.8 1. Refused at least once

9. NA

V19009 'MODE OF INTERVIEW 91' TLOC= 22 MD=9

Mode of Interview in 1991

568 4.3 0. Personal interview
8,788 95.6 1. Telephone interview
7 0.1 2. Mail interview

9. NA

V19010 'FAM COMP CHANGE 91' TLOC= 23 MD=9

Family Composition Change between 1990 and 1991 Waves

Codes 2 through 8 take priority over codes 0 and 1.

7,143 79.7 0. No change; no movers-in or movers-out of the family.
1,342 12.1 1. Change in members other than Head or Wife/Wife only.
253 2.5 2. Head is the same person as in 1990 but Wife/Wife left or died; Head has new Wife/Wife; used also when cohabiting, nonrelative female becomes "Wife."
140 1.7 3. Wife/Wife from 1990 is now Head.
140 0.9 4. 1990 female Head got married--husband (usually a nonsample member) is now Head. Used also when cohabiting, nonrelative male becomes Head.
297 2.8 5. Some sample member other than 1990 Head or Wife/Wife has become Head of this FU. (Used primarily for male and unmarried female splitoffs.)
48 0.3 6. Some female other than 1990 Head got married and her husband (nonsample member) is now Head. (Used primarily for married female splitoffs.)
7. Female Head in 1990 with husband in institution--husband in FU in 1991 and is now Head.
8. Other (used for recombined families--these are usually 1968 Heads and Wives who have parted for a
year or more, been interviewed separately, and who have reconciled at some time since the 1990 interview but prior to the 1991 interview.

V19011 'NUMBER MOVED IN 91' TLOC= 24
Number of Persons Who Moved Into FU between 1990 and 1991 Waves
mean nonzero = 1.4
8,018 88.8 0. Inap.: none; no change in family composition (V19010=0)
938 8.3 1. One
231 1.8 2. Two
97 0.6 3. Three
56 0.3 4. Four
10 0.1 5. Five
6 0.0 6. Six
5 0.0 7. Seven
2 0.0 8. Eight
9. Nine or more

V19012 'WHO MOVED IN 91' TLOC= 25
Relationship to 1991 Head of Person(s) Who Moved Into FU between 1990 and 1991 Waves
If more than one person moved in, the person with the highest priority was coded. The codes are in order of priority.
425 3.6 1. Head of family; splitoff or recontact interview (V19007=1 or 2)
62 0.4 2. Wife
533 4.3 3. Child, stepchild
20 0.2 4. Sibling
19 0.1 5. Parent
93 0.6 6. Grandchild, great-grandchild
67 0.4 7. In-laws and other relatives
126 1.5 8. Nonrelative
9. Husband of 1991 Head
8,018 88.8 0. Inap.: no change in family composition (V19010=0); no one moved in (V19011=0)

V19013 'NUMBER MOVED OUT 91' TLOC= 26
Number of Persons Who Moved Out of FU between 1990 and 1991 Waves
mean nonzero = 1.3
8,444 90.5 0. Inap.: none; splitoff or recontact interview (V19007=1 or 2); no change in family composition (V19010=0)
683 7.4 1. One
130 1.2 2. Two
62 0.6 3. Three
36 0.3 4. Four
4 0.0 5. Five
2 0.0 6. Six
2 0.0 7. Seven
8 0.8 8. Eight
9 0.0 9. Nine or more

V19014 'WHO MOVED OUT   91' TLOC=  27

Relationship to Last Year's Head of Person(s) Who Moved Out/Died between 1990 and 1991 Waves

If more than one person moved out, the person with the highest priority was coded. The codes are in order of priority.

160 1.9 1. Head of family
118 1.5 2. Wife
409 4.3 3. Child, stepchild
53 0.4 4. Sibling
19 0.1 5. Parent
39 0.3 6. Grandchild, great-grandchild
58 0.4 7. In-law or other relative
61 0.6 8. Nonrelative (including foster child)
2 0.0 9. Husband of 1990 Head

8,444 90.5 0. Inap.: splitoff or recontact interview (V19007=1 or 2); no change in family composition (V19010=0); no one moved out (V19013=0)

V19015 'CURRENT FAM COMP   91' TLOC=  28

1991 Family Composition

8,245 91.4 1. Head (and immediate family: wife/"wife," husband and/or children, if any) only
874 5.8 2. FU contains other relatives of Head, such as siblings, in-laws, parents, etc.
244 2.8 3. FU contains people unrelated to Head, such as foster children and friends.

V19016 'CURRENT HSEHOLD COMP 91' TLOC=  29

1991 Household Composition

284 3.0 4. This FU is a primary household containing a secondary which was interviewed separately.
101 0.9 5. This FU is a primary household containing a secondary which was neither included in this FU nor interviewed separately.
314 3.4 6. This FU is a secondary household contained within a primary which was interviewed separately.
This FU is a secondary household contained within a primary which was neither included in this FU nor interviewed separately.

This FU is a primary household in the same HU (housing unit) with another primary which was interviewed separately.

This FU is a primary household in the same HU (housing unit) with another primary which was neither included in this FU nor interviewed separately.

Inap.: this FU does not share the HU with other persons

1968 ID Number of Householder

Values for this variable in the range 0001-2930 indicate that the 1991 householder was a member of a panel family from the SRC cross-section core sample. Values in the range 5001-6872 denote that the householder was a member of a panel family from the Census core sample. Values in the range 7001-9043 denote that the householder was a member of a panel family from the Latino sample.

9999. NA who is householder; two primaries share HU (V19016=8 or 9)

0000. Inap.: householder has never been in study; FU is in institution

Person Number of Householder

Values for this variable in the range 001-227 indicate the actual person number of the householder.

999. NA who is householder (V19017=9999); two primaries share HU (V19016=8 or 9)

000. Inap.: householder has never been in study; FU is in institution

Age of Householder

This variable represents the actual age (01-97) of the householder.

98. Ninety-eight years old or older

99. NA age; NA who is householder (V19017=9999); two primaries share HU (V19016=8 or 9)

V19072 'WF XTRA JOB WRKhrs 90 ' TLOC= 156- 159

1991 Wife's/"Wife's" Annual Hours Worked on Extra Jobs in 1990

% nonzero = 3.5
mean nonzero = 358.2

The values for this variable in the range 0001-5840 represent the annualized work hours on all extra jobs; all missing data were assigned.
This variable was calculated from the product of D88 x D89 + D100 x D101 or E80 x E81 + E92 x E93.

0000. Ina.: none; did not work in 1990 (V19068=0000); no wife/"wife" (V19067=5/V19351=00); no extra job (V19801=5 or 9 or V19948=5 or 9)

V19073 'ACC WF 90 XTRA JOB WRKHR' TLOC= 160

Accuracy of V19072 (Wife's/"Wife's" annual hours worked on extra jobs in 1990)

9,317 99.5 0. Ina.: no assignment; no wife/"wife" (V19067=5/V19351=00); did not work in 1990 (V19068=0000); no extra job (V19072=0000)
15 0.2 1. Minor assignment
31 0.3 2. Major assignment

V19074 'WF ANN WRK HRS IN 90 ' TLOC= 161-164

1991 Wife's/"Wife's" Total Annual Work Hours in 1990

% nonzero = 35.3
mean nonzero = 1,553.2

The values for this variable in the range 0001-5840 represent the actual total annual hours on all jobs; all missing data were assigned. This variable is the sum of V19068, V19070 and V19072.

0000. Ina.: none; no wife/"wife" (V19067=5/V19351=00); did not work in 1990 (V19068=0000)

V19075 'WF HRS WRK LOST OTR ILL ' TLOC= 165-168

1991 Wife's/"Wife's" Annual Hours of Work Missed Because Someone Else was Ill in 1990

% nonzero = 7.9
mean nonzero = 49.8

The values for this variable in the range 0001-2080 represent the actual annual hours; all missing data were assigned. This variable was computed by multiplying D61 or E56 by 40.

0000. Ina.: none; no wife/"wife" (V19067=5/V19351=00); missed no work through illness of others (V19786=5 or 9 or V19935=5 or 9); never worked (V19859=5 or 9); not working now and last worked before 1990 (V19861=01-89, 97-99)

V19076 'ACC WF HR LOST OTR ILL ' TLOC= 169

Accuracy of V19075 (Wife's/"Wife's" annual hours of work missed because someone else was ill in 1990)
V19077 'WF HRS WRK LOST OWN ILL' TLOC= 170-173

1991 Wife's/'Wife's' Annual Hours of Illness in 1990

% nonzero = 13.3
mean nonzero = 181.7

The values for this variable in the range 0001-3280 represent the actual annual hours; all missing data were assigned. This variable was computed by multiplying D64 or E59 by 80 for the first eight weeks and by 60 for any weeks thereafter.

0000. Inap.: none; no wife/'wife' (V19067=5/V19351=00); missed no work through own illness (V19788=5 or 9 or V19937=5 or 9); never worked (V19859=5 or 9); not working now and last worked before 1990 (V19861=01-89, 97-99)

V19078 'ACC WF HRS LOST OWN ILL' TLOC= 174

Accuracy of V19077 (Wife's/'Wife's' annual hours of illness in 1990)

9,361 100.0 0. Inap.: no assignment; no wife/'wife' (V19067=5/V19351=00); missed no work through own illness (V19788=5 or 9 or V19937=5 or 9); never worked (V19859=5 or 9); not working now and last worked before 1990 (V19861=01-89, 97-99)

1. Minor assignment
2. Major assignment

V19079 'WF STRIKE HOURS 90' TLOC= 175-178

1991 Wife's/'Wife's' Annual Hours on Strike in 1990

% nonzero = 0.1
mean nonzero = 510.9

The values for this variable in the range 0001-2080 represent the actual annual hours; all missing data were assigned. This variable was computed by multiplying D70 or E62 by 40.

0000. Inap.: none; no wife/'wife' (V19067=5/V19351=00); missed no work through strikes (V19792=5 or 9 or V19939=5 or 9); never worked (V19859=5 or 9); not working now and last worked before 1990 (V19861=01-89, 97-99)
9,363 100.0 0. Inap.: no assignment; no wife/'wife' (V19067=5/ V19351=00); missed no work through strikes (V19079=0000); never worked (V19859=5 or 9); not working now and last worked before 1990 (V19861=01-89, 97-99)
1. Minor assignment
2. Major assignment

1991 Wife's/'Wife's' Annual Hours of Unemployment in 1990
% nonzero = 3.7
mean nonzero = 624.1

The values for this variable in the range 0001-2080 represent the actual annual hours; all missing data were assigned. This variable was computed by multiplying D73 or E7 or E65 by 40.

0000. Inap.: none; no wife/'wife' (V19067=5/V19351=00); was not unemployed or laid off during 1990 (V19794=5 or 9 or V19862=5 or 9 or V19941=5 or 9)

9,331 99.8 0. Inap.: no assignment; no wife/'wife' (V19067=5/ V19351=00); was not unemployed or laid off during 1990 (V19081=0000)
2 0.0 1. Minor assignment
30 0.2 2. Major assignment

% nonzero = 22.5
mean nonzero = 1,807.8

The values for this variable in the range 0001-2080 represent the actual annual hours; all missing data were assigned. This variable was computed by multiplying D76 or E68 by 40. If Wife/'Wife' was not currently working and had not worked since January 1, 1990, the weeks used for computation here were all those not included at E7.

0000. Inap.: none; no wife/'wife' (V19067=5/V19351=00); not out of the labor force during 1990 (V19796=5 or 9 or V19863=52 or V19943=5 or 9)
V19084  'ACC WF 90 HR OUT LBR FRC'  TLOC=  189

V19097  '# MAJOR ADULTS ' TLOC= 202

Number of Major Adults - 1991 Head and Wife/"Wife" Only

11 0.1 0. Single Head who is senile, etc.
4,027 47.3 1. One major adult (Head or Wife/"Wife")
5,325 52.5 2. Two major adults (Head and Wife/"Wife")
Family Size in 1991 (Number of members in the family unit at time of interview)

mean = 2.4

The range of possible values for this variable is at least 01 but not more than 20. The code value represents the actual number of persons in the FU, and has the same value as V19348. There are no missing data in this variable.

V19099  '# REQUIRED ROOMS '  TLOC=  205

Number of Rooms Required for FU of This Size, Age, and Sex Composition

The rule for calculating this variable is as follows:
2 rooms--for each Head with or without a Wife/"Wife"
+1 room--for each additional married couple or single person 18 or over
+1 room--for every two boys under 18
+1 room--for every two girls under 18
If there is an odd number of children, round up. If there is an odd number of girls and an odd number of boys, pair those under 10 years of age regardless of sex.

3,825  53.0  2. Two
2,958  28.2  3. Three
1,857  14.7  4. Four
518  3.1  5. Five
149  0.8  6. Six
38  0.1  7. Seven
9  0.1  8. Eight
9  0.0  9. Nine or more

V19100  'WIFE ANN HOUSEWORK (F2)'  TLOC=  206-  209

1991 Wife's/"Wife's" Annual Hours of Housework (Question F2)

% nonzero = 52.1
mean nonzero = 1,190.2

The values for this variable in the range 0001-4368 represent the actual annualized hours spent by the wife/"wife" on housework at the time of the interview; all missing data were assigned.

0000. Inap.: none; no wife/"wife" (V19067=5/V19351=00)

V19101  'ACC WIFE ANN HOUSEWORK '  TLOC=  210

Accuracy of V19100 (Wife's/"Wife's" annual housework hours)

9,324  99.8  0. Inap.: no assignment; no wife/"wife" (V19067=5/
V19351=00); no housework (V19100=0000)
20  0.1  1. Minor assignment
19  0.1  2. Major assignment
V19102 'HEAD ANN HOUSEWORK (F3)' TLOC= 211-214

1991 Head's Annual Hours of Housework (Question F3)

% nonzero = 88.8
mean nonzero = 572.9

The values for this variable in the range 0001-4368 represent the actual annualized hours spent by the Head on housework at the time of the interview; all missing data were assigned.

0000. Inap.: Head does no housework

V19103 'ACC HEAD ANN HOUSEWORK ' TLOC= 215

Accuracy of V19102 (Head's annual housework hours)

9,287 99.6 0. Inap.: no assignment; Head does no housework
(V19102=0000)
25 0.1 1. Minor assignment
51 0.3 2. Major assignment

V19104 '# IN HH GOT FD ST LST MO' TLOC= 216 MD=9

Number of People in Household for whom Food Stamps were Issued during Month Prior to Interview (Question F9)

mean nonzero, excluding missing data = 2.7

The household may include more people than those in the FU or everyone in the FU may not be receiving food stamps; therefore this number might not equal V19098 (Family Size in 1991).

Did Head and/or Wife/'Wife' have any taxable income?

7,924  89.2  1.  Yes

1,439  10.8  5.  No

NOTE: Labor and asset splits of farm and business income were made using
the 1990 work hours on jobs which generated those incomes. The rules are
as follows:
1) if work hours are greater than or equal to the (positive) dollar
   amount, then all income is assumed to be labor.
2) if work hours are less than the dollar amount, assume that labor
   is worth at least $1.00 per hour and that all income above that
   amount is split equally between labor and asset.
   Labor Portion=Total farm or business income/2 + work hours/2
   Asset Portion=Total farm or business income/2 - work hours/2
3) if total farm or business income represents a loss (i.e., a nega-
   tive number), then the labor portion equals 0 and the loss is
   coded in the asset portion.

1991 Head's Labor Part of Farm Income in 1990 (Question G5)

% nonzero = 0.8
mean nonzero = 17,093.7
The values for this variable in the range 00001-99998 represent the labor portion of Head's farm income reported at G5 in whole dollars; all missing data were assigned. The asset portion of farm income is located at V19138. See the note above for labor-asset split rules.

00000. Inap.: none; Head lost money at farming
    (V19138<0); Head is not a farmer or rancher
    (V20001=5)

99999. $99,999 or more

V19128 'LABOR PART BUS Y 90' TLOC= 257- 261

1991 Head's Labor Part of Unincorporated Business Income in 1990
(Question G11)

% nonzero = 6.3
mean nonzero = 13,538.2

The values for this variable in the range 00001-99998 represent the labor portion of Head's business income reported at G11 in whole dollars; all missing data were assigned. The asset portion of business income is located at V19139. See the note preceding V19127 for labor-asset split rules.

00000. Inap.: none; Head's unincorporated business lost money
    (V19139<0); did not own a business
    (V20003=5 or 9); corporation (V20007=1)

99999. $99,999 or more

V19129 'HEAD 90 WAGES' TLOC= 262- 267

1991 Head's Income from Wages and Salaries in 1990 (Questions G13 and G24)

% nonzero = 68.5
mean nonzero = 28,213.1

The values for this variable in the range 000001-999998 represent the wage income in whole dollars; all missing data were assigned.

000000. Inap.: no wages or salaries

999999. $999,999 or more

V19130 'ACC HEAD 90 WAGES' TLOC= 268

Accuracy of V19129 (Head's income from wages and salaries in 1990)

9,022  97.7  0. Inap.: no assignment; no wages (V19129=000000)
125   0.8  1. Minor assignment
216   1.6  2. Major assignment
1991 Head's Income from Bonuses, Overtime, and/or Commissions in 1990 (Questions G15 and G17)

% nonzero = 8.6
mean nonzero = 7,262.3

The values for this variable in the range 00001-99998 represent any extra bonus, overtime and commissions income not included by the respondent in V19130 in whole dollars; all missing data were assigned.

00000. Inap.: none; "No" to G12 or G14
99999. $99,999 or more

1991 Head's Income from Professional Practice or Trade in 1990 (Question G19:a)

% nonzero = 1.2
mean nonzero = 8,023.7

The values for this variable in the range 000001-999998 represent the income from professional practice or trade in whole dollars; all missing data were assigned.

000000. Inap.: none; "No" to G18a
999999. $999,999 or more

1991 Head's Labor Portion of Income from Farming or Market Gardening in 1990 (Question G19:b)

% nonzero = 0.3
mean nonzero = 4,668.4

Labor and asset splits of farming/market gardening were made using the 1990 work hours from the job that generated that income. The rule for these splits assumes 75% of the dollar amount is labor income, and the remaining 25% is asset income. If a loss is reported, then the labor portion equals zero and the loss is coded in the asset portion.

The values for this variable in the range 00001-99998 represent the labor portion of the farming and market gardening income reported at F19:b in whole dollars; all missing data were assigned. The asset portion of this income is located at V19140.

00000. Inap.: none; "No" to G18b; Head lost money at farming or market gardening (V19140<0)
1991 Head's Labor Portion of Income from Roomers and Boarders in 1990
(Question G19:c)

% nonzero = 0.0
mean nonzero = 1,633.6

Labor and asset splits of income from roomers and boarders were made using the 1990 work hours from the job which generated this income. The rules are as follows:
1) If Head owns the home, total income is split 50-50 into labor and asset.
2) If Head rents the home, all income is assumed to be labor income.

The values for this variable in the range 00001-99998 represent the labor portion of the income from roomers and boarders reported at G19:c in whole dollars; all missing data were assigned. The asset portion of this income is located at V19141.

00000. Inap.: none; "No" to G18c; Head lost money from roomers and boarders (V19141<0)

99999. $99,999 or more

Accuracy of V19127-V19128 and V19131-V19134 (1990 Head's labor income in 1990, excluding wages)

9,249 98.7 0. Inap.: no assignment; no non-wage labor income (V19127-V19128 and V19131-V19134=0)
20 0.2 1. Minor assignment
94 1.1 2. Major assignment

1991 Wife's/"Wife's" Wages and Other Labor Income in 1990 (Question G52)

% nonzero = 35.0
mean nonzero = 16,034.9

The values for this variable in the range 000001-999998 represent the actual wage income in whole dollars; all missing data were assigned. If the Wife/"Wife" had any income from farming, business, market gardening, or roomers and boarders, labor-asset splits were made following the same rules as those for the Head. The labor portion of such income is included here; the asset portion is included in the appropriate variable(s) in the range V19138-V19141; V19142 contains only the wife's/"wife's" total asset portion.
V19137 'ACC WF 90 LABOR/WAGE ' TLOC= 297

Accuracy of V19136 (Wife's/"Wife's" wages and other labor income in 1990)

9,225 99.2 0. Inap.: no assignment; no wife/"wife" (V19067=5/ V19351=00); no labor income (V19136=00000)
51 0.2 1. Minor assignment
87 0.6 2. Major assignment

V19138 'ASSET PART FARM Y 90 ' TLOC= 298- 303

1991 Head's and Wife's/"Wife's" Asset Portion of Farm Income in 1990 (Question G5)

% nonzero = 1.1
mean nonzero, including negative values = 8,924.7

The data coded here represent the asset portion of the income reported at G5 in whole dollars. The range of values for this variable is -99999 through 999999; 000000 represents zero income and negative values represent overall income losses. All missing data were assigned. The labor portion of farm income is located at V19127 for Heads, at V19136 for Wives/"Wives." See the note preceding V19127 for labor-asset split rules. If the Head and the Wife/"Wife" co-owned the farm, then labor income is prorated according to any work hours of each; the assets are split half and half.

-99999. Loss of $99,999 or more
000000. None
999999. $999,999 or more

V19139 'ASSET PART BUS Y 90 ' TLOC= 304- 309

1991 Head's and Wife's/"Wife's" Asset Portion of Unincorporated Business Income in 1990 (Question G11)

% nonzero = 8.3
mean nonzero, including negative values = 9,807.7

The data coded here represent both Head's and Wife's/"Wife's" asset portion of the income reported at G11 in whole dollars. The range of values for this variable is -99999 through 999999; 000000 represents zero income and negative values represent overall income losses. All missing data were assigned. The labor portion of business income is located at V19128 for Heads, at V19136 for Wives/"Wives." See the note preceding V19127 for labor-asset split rules. If the Head and
the Wife/"Wife" co-owned the business, then labor income is prorated according to any work hours of each; the assets are split half and half.

-99999. Loss of $99,999 or more
000000. None
999999. $999,999 or more

V19140 'ASSET PT MKT GARDN 90 ' TLOC= 310- 314
1991 Head's and Wife's/"Wife's" Asset Portion of Farming or Market Gardening in 1990 (Question G19:b)

% nonzero = 0.5
mean nonzero, including negative values = 638.9

The data coded here represent the asset portion of the income reported at G19:b in whole dollars. The range of values for this variable is -9999 through 99999; 00000 represents zero income and negative values represent overall income losses. All missing data were assigned. The labor portion of this income is located at V19133 for Heads, at V19136 for Wives/"Wives." See V19133 for labor-asset split rules.

-9999. Loss of $9,999 or more
00000. None
999999. $99,999 or more

V19141 'ASSET PT ROOMERS 90 ' TLOC= 315- 319
1991 Head's and Wife's/"Wife's" Asset Portion of Income from Roomers and Boarders in 1990 (Question G19:c)

% nonzero = 0.0
mean nonzero, including negative values = 1,341.6

The data coded here represent the asset portion of the income reported at G19:c in whole dollars. The range of values for this variable is -9999 through 99999; 00000 represents zero income and negative values represent overall income losses. All missing data were assigned. The labor portion of this income is located at V19133 for Heads, at V19136 for Wives/"Wives." See V19134 for labor-asset split rules.

-9999. Loss of $9,999 or more
00000. None
999999. $99,999 or more

V19142 'WF PT ASSET INCOME 90 ' TLOC= 320- 325
Wife's/"Wife's" Share of Assets in V19138-V19141

% nonzero = 2.3
mean nonzero, including negative values = 4,680.6

The data coded here represent the Wife's/"Wife's" asset portion from V19139-V19140 (questions G5, G11, G19b, G19c and G52) in whole dollars. If any assets from farming, business, market gardening, or roomers/boarders are joint with the Head, then one-half of those assets is coded for the Wife/"Wife" here; if solely owned by the Wife/"Wife", then all assets are entered here.

The range of values for this variable is -99999 through 999999; 000000 represents zero income and negative values represent overall income losses. All missing data were assigned.

-99999. Negative asset income of $99,999 or more

000000. Inap.: no wife/"wife" (V19067=5/V19351=00); any asset income in V19138-V19141 is Head's only

999999. $999,999 or more

V19295 'SEQ# 5TH OFUM W TXBL Y ' TLOC= 658- 659

1991 Sequence Number of Fifth Other FU Member With Taxable Income
The actual 1991 sequence number (V30643) of the individual who produced the income is coded here. This provides a link with the individual-level data of this person.

00. Inap.: income is not prorated; no Other FU Member with taxable income (V19274=5); no Second Other FU Member with taxable income (V19280=00); no Third Other FU Member with taxable income (V19285=00); no Fourth Other FU Member with taxable income (V19290=00); no Fifth Other FU Member with taxable income

V19296 'P PRORAT TXBL Y 5TH OFUM' TLOC= 660-661

Percentage Prorated Taxable Income of Fifth Other FU Member

% nonzero = 0.0
mean nonzero, including negative values = 50.0

Incomes for part-year family unit members are coded based on the portion of annual income earned and the amount of time these persons were living in the family during 1990. This percent proration variable provides a means of creating whole-year income for the individual; simply divide the total taxable income (V19297) by the percent proration (V19296).

00. Inap.: income is not prorated; no Other FU Member with taxable income (V19274=5); no Second Other FU Member with taxable income (V19280=00); no Third Other FU Member with taxable income (V19285=00); no Fourth Other FU Member with taxable income (V19290=00); no Fifth Other FU Member with taxable income (V19295=00)

V19297 'TXBL Y 5TH XTRA EARNER ' TLOC= 662-667

Taxable Income in 1990 of Fifth Other FU Member

% nonzero = 0.0
mean nonzero, including negative values = 7,249.5

The range of values for this variable is -99999 through 999999; 000000 represents zero income and negative values represent overall income losses. All missing data were assigned.

-99999. Loss of $99,999 or more

000000. Inap.: none; no Other FU Member with taxable income (V19274=5); no Second Other FU Member with taxable income (V19280=00); no Third Other FU Member with taxable income (V19285=00); no Fourth Other FU Member with taxable income (V19290=00); no Fifth Other FU Member with taxable income (V19295=00)
Number of Exemptions for 1990 Tax Year--Fifth Other FU Member

% nonzero = 0.0
mean nonzero = 1.3

The values for this variable represent the actual number of exemptions allowed the Fifth Other FU Member.

00. Inap.: no Other FU Member with taxable income (V19274=5); no Second Other FU Member with taxable income (V19280=00); no Third Other FU Member with taxable income (V19285=00); no Fourth Other FU Member with taxable income (V19290=00); no Fifth Other FU Member with taxable income (V19295=00)

Tax Table Used for 1990 Tax Year--Fifth Other FU Member

Annual 1990 Work Hours of All Other FU Members in FU during 1990

% nonzero = 21.9
mean nonzero = 1,403.2

The values for this variable in the range 0001-9998 represent the actual annual hours worked; all missing data were assigned.

0000. Inap.: no Other FU Member worked in 1990; no Other FU Member with taxable income (V19274=5)

9999. 9,999 hours or more
Total 1990 Taxable Income of All Other FU Members in FU during 1990

% nonzero = 23.8
mean nonzero, including negative values = 11,002.5

The range of values for this variable is -99999 through 999999; 000000 represents zero income and negative values represent overall income losses. All missing data were assigned. The values represent the sum of V19277, V19282, V19287, V19292, and V19297, as well as any additional taxable income if there were more than five persons with such income.

-99999. Loss of $99,999 or more
000000. None; no Other FU Member with taxable income (V19274=5)
999999. $999,999 or more

V19302 'ACC OFUM ANN TXBL Y 90 ' TLOC= 681
Accuracy of V19301 (Total 1990 taxable income of all others in FU)
8,823 95.3 0. Inap.: no assignment; no Other FU Member with taxable income (V19274=5)
43 0.4 1. Minor assignment
497 4.3 2. Major assignment

V19303 'OFUM 90 ASSET Y ' TLOC= 682- 686
Total 1990 Asset Income of All Other FU Members in FU during 1990

% nonzero = 3.6
mean nonzero, including negative values = 2,276.9

The range of values for this variable is -9999 through 999999; 000000 represents zero income and negative values represent overall income losses. All missing data were assigned. The amount represented by this variable is included in the total taxable income of others (V19301).

-9999. Loss of $9,999 or more
00000. Inap.: none; no Other FU Members with taxable income (V19274=5)
99999. $99,999 or more

V19304 'OFUM REC TRANSFER Y? ' TLOC= 687
Did Any Other FU Member Receive Any Transfer Income in 1990?

684 6.0 1. Yes
Total 1990 ADC/AFDC Income Received by All Other FU Members in FU during 1990

% nonzero = 0.3
mean nonzero = 2,682.6

The values for this variable in the range 00001-99998 represent the ADC/AFDC income in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from ADC/AFDC

99999. $99,999 or more

Total 1990 Supplemental Security Income Received by All Other FU Members in FU during 1990

% nonzero = 0.7
mean nonzero = 3,563.7

The values for this variable in the range 00001-99998 represent the SSI income in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from SSI

99999. $99,999 or more

Total 1990 Other Welfare Income Received by All Other FU Members in FU during 1990

% nonzero = 0.5
mean nonzero = 2,447.5

The values for this variable in the range 00001-99998 represent the amount of other welfare in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from other welfare

99999. $99,999 or more
V19308 'OFUM 90 SOC SECURITY ' TLOC= 703- 707

Total 1990 Social Security Payments Received by All Other FU Members in FU during 1990

% nonzero = 3.5
mean nonzero = 5,192.3

The values for this variable in the range 00001-99998 represent the amount of Social Security in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from Social Security
99999. $99,999 or more

V19309 'OFUM 90 VA PAYMENTS ' TLOC= 708- 712

Total 1990 Veterans Administration Pension(s) Received by All Other FU Members in FU in 1990

% nonzero = 0.3
mean nonzero = 3,690.3

The values for this variable in the range 00001-99998 represent the amount of Veterans Administration Pension income in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from Veterans Administration
99999. $99,999 or more

V19310 'OFUM 90 OTR RETIREMENT ' TLOC= 713- 717

Total 1990 Other Retirement, Pensions, and Annuities Received by All Other FU Members in FU during 1990

% nonzero = 1.3
mean nonzero = 5,732.0

The values for this variable in the range 00001-99998 represent the amount of other retirement, pensions and annuities in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from other retirement
99999. $99,999 or more
V19311 'OFUM 90 UNEMP COMP ' TLOC=  718- 722
Total 1990 Unemployment Compensation Received by All Other FU Members in FU during 1990
% nonzero = 0.3
mean nonzero = 2,297.0
The values for this variable in the range 00001-99998 represent the amount of unemployment pay in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from unemployment
99999. $99,999 or more

V19312 'OFUM 90 WORKERS COMP ' TLOC=  723- 727
Total 1990 Worker's Compensation Received by All Other FU Members in FU during 1990
% nonzero = 0.1
mean nonzero = 4,994.1
The values for this variable in the range 00001-99998 represent the amount of worker's compensation in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from worker's compensation
99999. $99,999 or more

V19313 'OFUM 90 CHILD SUPPORT ' TLOC=  728- 732
Total 1990 Child Support Received by All Other FU Members in FU during 1990
% nonzero = 0.2
mean nonzero = 1,679.5
The values for this variable in the range 00001-99998 represent the amount of child support received in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members with income from child support
99999. $99,999 or more
V19314 'OFUM 90 HELP FROM RELS' TLOC= 733- 737

Total Help Received from Relatives in 1990 by All Other FU Members in FU during 1990

% nonzero = 0.1
mean nonzero = 1,213.9

The values for this variable in the range 00001-99998 represent the amount of financial help received from relatives in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members received help from relatives

99999. $99,999 or more

V19315 'OFUM 90 MISC TRANSFERS' TLOC= 738- 742

Total Other Transfer Income Received in 1990 by All Other FU Members in FU during 1990

% nonzero = 0.4
mean nonzero = 2,110.9

The values for this variable in the range 00001-99998 represent the amount of other transfer income in whole dollars; all missing data were assigned.

00000. Inap.: no Other FU Member with transfer income (V19304=5); no Other FU Members received miscellaneous transfers

99999. $99,999 or more

V19316 'NOPRO TOT TRANS Y OFUM90' TLOC= 743- 747

Total 1990 Transfer Income of All Other FU Members during 1990-NOT PRORATED

% nonzero = 6.0
mean nonzero = 5,960.6

The values for this variable in the range 00001-99998 represent the actual amount of transfers received by all Other FU Members during 1990, regardless of time spent in the FU. This variable is not equivalent to calculations from the 1985 wave and earlier. See V19317 for a measure that is. For an explanation of prorating, see Section I, Part 3.

00000. Inap.: no Other FU Members with transfer income (V19304=5)
99999. $99,999 or more

V19317 'PRO TOT TRANS Y OFUM 90 ' TLOC= 748- 752

Total 1990 Transfer Income of All Other FU Members in FU during 1990-
ANNUAL PRORATED TOTAL

% nonzero = 6.0
mean nonzero = 5,484.7

The values for this variable in the range 00001-99998 represent the
sum of V19305 through V19315 in whole dollars.

00000. Inap.: no Other FU Members with transfer income
(V19304=5)

99999. $99,999 or more

V19318 'ACC OFUM 90 TRANSFERS ' TLOC= 753

V19321 '1968 ID ' TLOC= 756- 759

1968 Interview Number

Values for this variable in the range 0001-2930 indicate that the 1991 Head (or Wife/"Wife" if the Head is nonsample) of FU was a member of a panel family from the SRC cross-section core sample. Values in the range 5001-6872 denote that the Head (or Wife/"Wife" if the Head is nonsample) was a member of a panel family from the Census core sample. Values in the range 7001-9043 denote that the Head was a member of a panel family from the LNPS-Temple (Latino) sample.

V19322 '1969 ID ' TLOC= 760- 763

1969 Interview Number

Values for this variable in the range 0001-4460 indicate the 1969 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1969; Latino interview (V19321=7001-9043)

V19323 '1970 ID ' TLOC= 764- 767

1970 Interview Number

Values for this variable in the range 0001-4645 indicate the 1970 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1970; Latino interview (V19321=7001-9043)

V19324 '1971 ID ' TLOC= 768- 771

1971 Interview Number

Values for this variable in the range 0001-4840 indicate the 1971 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1971; Latino interview (V19321=7001-9043)

V19325 '1972 ID ' TLOC= 772- 775
1972 Interview Number
Values for this variable in the range 0001-5060 indicate the 1972 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1972; Latino interview (V19321=7001-9043)

V19326 '1973 ID ' TLOC= 776- 779

1973 Interview Number
Values for this variable in the range 0001-5285 indicate the 1973 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1973; Latino interview (V19321=7001-9043)

V19327 '1974 ID ' TLOC= 780- 783

1974 Interview Number
Values for this variable in the range 0001-5517 indicate the 1974 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1974; Latino interview (V19321=7001-9043)

V19328 '1975 ID ' TLOC= 784- 787

1975 Interview Number
Values for this variable in the range 0001-5725 indicate the 1975 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1975; Latino interview (V19321=7001-9043)

V19329 '1976 ID ' TLOC= 788- 791

1976 Interview Number
Values for this variable in the range 0001-5862 indicate the 1976 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1976; Latino interview (V19321=7001-9043)

V19330 '1977 ID ' TLOC= 792- 795
1977 Interview Number
Values for this variable in the range 0001-6007 indicate the 1977 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1977; Latino interview (V19321=7001-9043)

V19331 '1978 ID'  
    ' TLOC= 796-799

1978 Interview Number
Values for this variable in the range 0001-6154 indicate the 1978 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1978; Latino interview (V19321=7001-9043)

V19332 '1979 ID'  
    ' TLOC= 800-803

1979 Interview Number
Values for this variable in the range 0001-6373 indicate the 1979 interview number of the 1991 Head of FU

0000. 1991 Head of FU, if sample member, was not in any panel family in 1979; Latino interview (V19321=7001-9043)

V19333 '1980 ID'  
    ' TLOC= 804-807

1980 Interview Number
Values for this variable in the range 0001-6533 indicate the 1980 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1980; Latino interview (V19321=7001-9043)

V19334 '1981 ID'  
    ' TLOC= 808-811

1981 Interview Number
Values for this variable in the range 0001-6620 indicate the 1981 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1981; Latino interview (V19321=7001-9043)

V19335 '1982 ID'  
    ' TLOC= 812-815
1982 Interview Number
Values for this variable in the range 0001-6742 indicate the 1982 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1982; Latino interview (V19321=7001-9043)

V19336 '1983 ID    ' TLOC=  816- 819

1983 Interview Number
Values for this variable in the range 0001-6852 indicate the 1990 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1983; Latino interview (V19321=7001-9043)

V19337 '1984 ID    ' TLOC=  820- 823

1984 Interview Number
Values for this variable in the range 0001-6918 indicate the 1984 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1984; Latino interview (V19321=7001-9043)

V19338 '1985 ID    ' TLOC=  824- 827

1985 Interview Number
Values for this variable in the range 0001-7032 indicate the 1985 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1985; Latino interview (V19321=7001-9043)

V19339 '1986 ID    ' TLOC=  828- 831

1986 Interview Number
Values for this variable in the range 0001-7018 indicate the 1986 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1986; Latino interview (V19321=7001-9043)

V19340 '1987 ID    ' TLOC=  832- 835
1987 Interview Number

Values for this variable in the range 0001-7061 indicate the 1987 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1987; Latino interview (V19321=7001-9043)

V19341 '1988 ID       ' TLOC= 836- 839

1988 Interview Number

Values for this variable in the range 0001-7114 indicate the 1988 interview number of the 1991 Head of FU.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1988; Latino interview (V19321=7001-9043)

V19342 '1989 ID       ' TLOC= 840- 843

1989 Interview Number

Values for this variable in the range 0001-7114 indicate the 1989 interview number of the 1991 Head of FU for core families.

0000. 1991 Head of FU, if sample member, was not in any panel family in 1989; Latino interview (V19321=7001-9043)

V19343 '1990 ID       ' TLOC= 844- 848

1990 Interview Number

Values for this variable in the range 00001-07328 indicate core sample cases; values in the range 10001-12043 indicate Latino sample families.

00000. 1991 Head of FU, if sample member, was not in any panel family in 1990

V19344 'INTERVIEWER ID # 1991 ' TLOC= 849- 852 MD=9999

Interviewer's ID Number

This is the 4-digit identification number assigned to each interviewer by the Survey Research Center's Field Office as his or her personal identifier.

9999. NA

0000. Mail interview
V19345  'INTERVIEWER INTVIEW # '  TLOC=  853-  855  MD=999

  Interviewer's Interview Number

  Each interviewer sequentially assigns a 3-digit number (001-998) to every interview that he or she completes.

  999. NA; mail interview

V19346  'DATE OF 1991 IW '  TLOC=  856-  859  MD=9999

  Date of 1991 Interview

  The first two digits represent the month that the interview was taken (03=March, 04=April, etc). The last two digits represent the day of the month that the interview was taken. Interviewing for 1991 began February 24 (0224).

  9999. NA; mail interview

V19347  'LENGTH OF 1991 IW '  TLOC=  860-  862  MD=999

  Length of 1991 Interview

  mean, excluding missing data = 29.6

  The actual number of minutes taken by the interviewer to administer the questionnaire is coded here.

  999. NA; mail interview

V19348  '# IN FU '  TLOC=  863-  864

  Number of Persons in FU at the Time of the 1991 Interview

  mean = 2.4

  This variable is identical to V19098. Its values range from 01 to no more than 20. The code values represent the actual number of persons currently in the FU.

V19349  'AGE OF 1991 HEAD '  TLOC=  865-  866  MD=99

  Age of 1991 Head

  mean, excluding missing data = 47.8

  This variable represents the actual age of the 1991 Head of the FU. The range of values is usually from 18 through 98, although in rare cases a person under 18 might become Head.

  98. Ninety-eight years of age or older

  99. NA
V19350 'SEX OF 1991 HEAD ' TLOC= 867
   Sex of 1991 Head
   6,587 68.4 1. Male
   2,776 31.6 2. Female

V19351 'AGE OF 1991 WIFE ' TLOC= 868- 869 MD=99
   Age of 1991 Wife/"Wife"
   % nonzero = 52.5
   mean nonzero, excluding missing data = 44.8

   This variable represents the actual age of the current wife or "wife"
   (cohabiting female friend). The range of allowed values is 14 through
   98, although wives/"wives" aged 14-16 are rare.

   00. No wife/"wife" in FU:  Head is female (V19350=2) or
                              single male
   98. Ninety-eight years of age or older
   99. NA

V19352 '# CHILDREN IN FU ' TLOC= 870- 871
   Number of Persons Now in the FU Under 18 Years of Age
   % nonzero = 35.3
   mean nonzero = 1.9

   This variable represents the actual number of persons currently in the
   FU who are neither Head nor Wife/"Wife" from newborns through those 17
   years of age, whether or not they are actually children of the Head or
   Wife/"Wife."

   00. None

V19353 'AGE YOUNGEST CHILD ' TLOC= 872- 873 MD=99
   Age of Youngest Person Now in the FU Under 18 Years of Age
   % nonzero = 35.3
   mean nonzero, excluding missing data = 7.0

   The range of values for this variable represents the actual age in
   years (01 through 17) of the youngest FU Member in this age range and
   excludes Heads and Wives/"Wives"; note that a child's age is not coded
   02 (two years old) until he/she reaches his/her second birthday.

   01. Newborn up to second birthday
   99. NA; DK
00. Inap.: no persons age 17 or younger in FU
(V19352=00)

V19354 'NONFU SHARING HU' TLOC= 874-875 MD=99

Number of Non-FU Members Sharing Housing Unit with This FU

% nonzero = 11.8
mean nonzero, excluding missing data = 1.9

This variable represents the actual number of non-FU members (01-20) sharing the housing unit with this FU, whether or not the non-FU members were included in another responding FU.

99. NA; DK
00. None

V19355 'MARITAL STATUS' TLOC= 876 MD=9

A3. Are you (HEAD) married, widowed, divorced, separated, or have you never been married?

V19404 'B13 PAY/HR-SALARY (HD-E)' TLOC= 935-938 MD=9999

B13. How much is your salary?

% nonzero = 27.9
mean nonzero, excluding missing data = 16.504 (with implied decimals)

The values for this variable represent dollars and cents per hour; if salary is given as an annual figure, it is divided by 2000 hours per year; if weekly, by 40 hours per week.

OSIRIS USERS: Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 or more per hour
9999. NA; DK
0000. Inap.: not working for money now (V19395=5); is not salaried (V19403=3, 7 or 9)
B14. If you were to work more hours than usual during some week, would you get paid for those extra hours of work?

| Value | Yes | No | "NA; DK"
|-------|-----|----|-----------------
| 532   | 5.7 | 1.0| Inap.: not working for money now (V19395=5); is not salaried (V19403=3, 7 or 9)
| 1,654 | 22.2| 5.0| Inap.: not working for money now (V19395=5); is not salaried (V19403=3, 7 or 9)
| 10    | 0.1 | 9.0| Inap.: not working for money now (V19395=5); is not salaried (V19403=3, 7 or 9)

B15. About how much would you make per hour for those extra hours?

- % nonzero = 5.7
- Mean nonzero, excluding missing data = 18.880 (with implied decimals)

The values for this variable represent dollars and cents per hour.

**OSIRIS USERS:** Note that this variable is defined in the dictionary as having no decimal places.

- 9998. $99.98 or more per hour
- 9999. NA; DK
- 0000. Inap.: not working for money now (V19395=5); is not salaried (V19403=3, 7 or 9); would not get paid (V19405=5 or 9)

B16. What is your hourly wage rate for your regular work time?

- % nonzero = 30.0
- Mean nonzero, excluding missing data = 10.800 (with implied decimals)

The values for this variable represent dollars and cents per hour.

**OSIRIS USERS:** Note that this variable is defined in the dictionary as having no decimal places.

- 9998. $99.98 or more per hour
- 9999. NA; DK
- 0000. Inap.: not working for money now (V19395=5); is not paid an hourly wage (V19403=1, 7 or 9)
B17. What is your hourly wage rate for overtime?

% nonzero = 26.3
mean nonzero, excluding missing data = 16.284 (with implied decimals)

The values for this variable represent dollars and cents per hour.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 or more per hour

9999. NA; DK

0000. Inap.: not working for money now (V19395=5); is not paid an hourly wage (V19403=1, 7 or 9)

V19409 'B18 HOW PAID-OTR (HD-E)' TLOC= 952 MD=9

B18. How is that?-NEITHER SALARIED NOR PAID HOURLY

78  0.7  1. Piecework; hourly plus piecework/production
173  2.2  2. Commission
27  0.3  3. Tips; tips and salary/hourly wage
105  1.4  4. Hourly/salary plus commission
279  3.7  5. Self-employed; farmer; "profits"
310  2.6  6. By the job/day/mile
31  0.3  7. Other

V19436 'B35-36 BEG OCC PRES EMP ' TLOC= 994- 996 MD=999

B35. What was your (HEAD'S) occupation when you started working for that employer in 1990? What sort of work did you do?

B36. What were your most important activities or duties?

The 3-digit occupation code from 1970 Census of Population; Alphabetical Index of Industries and Occupation issued June 1971 by the U.S. Department of Commerce and the Bureau of the Census was used for this variable. Please refer to Appendix 2, Wave XIV documentation, for complete listings.

5 0.1 001-195. Professional, Technical, and Kindred Workers
6 0.1 201-245. Managers and Administrators, Except Farm
1 0.0 260-285. Sales Workers
12 0.3 301-395. Clerical and Kindred Workers
10 0.1 401-600. Craftsmen and Kindred Workers
V19437  'B37 STARTING WAGE (H-E)'  TLOC=  997- 1000  MD=9999

B37. What was your starting salary or wage at that time?

% nonzero = 9.2
mean nonzero, excluding missing data = 9.534 (with implied decimals)

The values for this variable represent dollars and cents per hour. For calculation of hourly rates from salary amounts, the hours per week worked from question B38 were used. Annual salaries were divided by the answer to B38 times 52 weeks; monthly salaries by B38 times 4.3 weeks.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 per hour or more
9999. NA; DK

0000. Inap.: not working for money now (V19395=5); did not begin working for present employer during 1990 (V19422=01-89, 91, 96-99); same position as in 1990 (V19423=1 or 9)

V19438  'B38 STARTING HR/WK (H-E)'  TLOC=  1001- 1002  MD=99

B38. And how many hours a week did you work when you started?

% nonzero = 9.3
mean nonzero, excluding missing data = 40.2

The values for this variable represent the actual number of hours per week Head worked.

01. One hour or less per week
98. Ninety-eight hours or more per week
99. NA; DK

999. NA; DK

9,253 98.4 000. Inap.: not working for money now (V19395=5);
        no extra jobs (V19499=5 or 9); only one extra job (V19500=1)

V19527 'B99 AV PY/HR X JB2+(H-E)' TLOC= 1134-1137 MD=9999

B99. About how much did you make at this? - ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 1.5
mean nonzero, excluding missing data = 16.351 (with implied decimals)

The values for this variable represent dollars and cents per hour. If the amount was given as something other than an hourly rate, the same rules as those for V19404 were used. If Head had more than two extra jobs, the value here represents a weighted average hourly wage from all of them except the first one.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 or more per hour
9999. NA; DK
0000. Inap.: not working for money now (V19395=5); no extra jobs (V19499=5 or 9); only one extra job (V19500=1)

B100. And, how many weeks did you work on this extra job in 1990?-ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 1.6
mean nonzero, excluding missing data = 20.9

The values for this variable represent the actual number of weeks (01-52) Head worked on all of his/her extra jobs except the first one.

01. One week or less
99. NA; DK
00. Inap.: not working for money now (V19395=5); no extra jobs (V19499=5 or 9); only one extra job (V19500=1)

B101. On the average, how many hours a week did you work on this job?-ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 1.6
mean nonzero, excluding missing data = 14.7

The values for this variable represent the actual number of hours per week. If Head had more than two extra jobs, the value here represents a weighted average of hours spent on all extra jobs except the first one.

01. One hour or less
98. Ninety-eight hours or more
99. NA; DK
00. Inap.: not working for money now (V19395=5); no extra jobs (V19499=5 or 9); only one extra job (V19500=1)

or 9)

V19584 'C29 WAGE BEG LAST EMP HD' TLOC= 1220-1223 MD=9999

C29. What was your starting salary or wage at that time?

% nonzero = 2.2
mean nonzero, excluding missing data = 7.878 (with implied decimals)

The values for this variable represent dollars and cents per hour.
For calculation of hourly rates from salary amounts, the hours per
week worked from question C30 were used. Annual salaries were divided
by the answer to C30 times 52 weeks; monthly salaries by C30 times 4.3
weeks.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no
decimal places.

9998. $99.98 per hour or more

V19674 'C91 AV PY/HR X JB2+(H-U)'  TLOC= 1357-1360  MD=9999

C91. About how much did you make at this?—ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 0.0
mean nonzero, excluding missing data = 8.750 (with implied decimals)

The values for this variable represent dollars and cents per hour. If the amount was given as something other than an hourly rate, the same rules as those for V19404 were used. If Head had more than two extra jobs, the value here represents a weighted average hourly wage from all of them except the first one.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 or more per hour
9999. NA; DK

0000. Inap.: working now or only temporarily laid off (V19393=1 or 2 or V19395=1); never worked (V19557=5 or 9); last worked before 1990 (V19559=01-89, 97-99); no extra jobs (V19646=5 or 9); only one extra job (V19647=1)

V19675 'C92 # WK XTRA JOB2+(H-U)'  TLOC= 1361-1362  MD=99

C92. And, how many weeks did you work on this extra job in 1990?—ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 0.0
mean nonzero, excluding missing data = 23.2

The values for this variable represent the actual number of weeks (01-52) Head worked on all of his/her extra jobs except the first one.

01. One week or less
99. NA; DK
V19676 'C93 AV HR/WK X JB2+(H-U)' TLOC= 1363- 1364 MD=99

C93. On the average, how many hours a week did you work on this job? — ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 0.0
mean nonzero, excluding missing data = 16.0

The values for this variable represent the actual number of hours per week Head worked. If Head had more than two extra jobs, the value here represents a weighted average of hours spent on all extra jobs except the first one.

01. One hour or less
98. Ninety-eight hours or more
99. NA; DK

1 0.0 999. NA; DK

9,339 99.7 000. Inap.: no wife/"wife" in FU (V19694=2 or 3); not working for money now (V19697=5); did not begin working for present employer during 1990 (V19724=01-89, 91, 96-99); same position as in 1990 (V19725=1 or 9)

V19739 'D37 STARTING WAGE (W-E)' TLOC= 1465-1468 MD=9999

D37. What was her starting salary or wage at that time?

% nonzero = 5.0
mean nonzero, excluding missing data = 7.390 (with implied decimals)

The values for this variable represent dollars and cents per hour. For calculation of hourly rates from salary amounts, the hours per week worked from question D38 were used. Annual salaries were divided by the answer to D38 times 52 weeks; monthly salaries by D38 times 4.3 weeks.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 per hour or more
9999. NA; DK
0000. Inap.: no wife/"wife" in FU (V19694=2 or 3); not working for money now (V19697=5); did not begin working for present employer during 1990 (V19724=01-89, 91, 96-99)

9999. NA; DK
0000. Inap.: no wife/Wife in FU (V19694=2 or 3); not working for money now (V19697=5); no extra jobs (V19801=5 or 9); only one extra job (V19802=1)

D100. And, how many weeks did she work on this extra job in 1990? - ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 0.3
mean nonzero, excluding missing data = 33.2

The values for this variable represent the actual number of weeks (01-52) Wife/Wife worked on all of her extra jobs except the first one.

01. One week or less
99. NA; DK
00. Inap.: no wife/Wife in FU (V19694=2 or 3); not working for money now (V19697=5); no extra jobs (V19801=5 or 9); only one extra job (V19802=1)

D101. On the average, how many hours a week did she work on this job? - ALL EXTRA JOBS EXCEPT FIRST

% nonzero = 0.3
mean nonzero, excluding missing data = 10.8

The values for this variable represent the actual number of hours per week. If Wife/Wife had more than two extra jobs, the value here
represents a weighted average of hours spent on all extra jobs except the first one.

01. One hour or less
98. Ninety-eight hours or more
99. NA; DK

00. Inap.: no wife/"wife" in FU (V19694=2 or 3); not working for money now (V19697=5); no extra jobs (V19801=5 or 9); only one extra job (V19802=1)

D102. In what month and year did she start working for that employer?-MONTH BEGAN SECOND EXTRA JOB

V19885 'E27-8 BEG OCC LAST EMP-W' TLOC= 1685- 1687 MD=999

E27. What was your (wife's/"WIFE'S") occupation when she started working for that employer in 1990? What sort of work did she do?

E28. What were her most important activities or duties?

The 3-digit occupation code from 1970 Census of Population; Alphabetical Index of Industries and Occupation issued June 1971 by the U.S. Department of Commerce and the Bureau of the Census was used for
this variable. Please refer to Appendix 2, Wave XIV documentation, for complete listings.

V19886 'E29 WAGE BEG LAST EMP-WF' TLOC= 1688-1691 MD=9999

E29. What was her starting salary or wage at that time?

% nonzero = 1.7
mean nonzero, excluding missing data = 6.407 (with implied decimals)

The values for this variable represent dollars and cents per hour.
For calculation of hourly rates from salary amounts, the hours per week worked from question E30 were used. Annual salaries were divided by the answer to E30 times 52 weeks; monthly salaries by E30 times 4.3 weeks.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

V19932 'E-# WORK HIST SUPPS(W-U)' TLOC= 1755- 1756

Number of Additional Work History Spells for Section E

% nonzero = 0.1
mean nonzero = 1.2

The values for this variable represent the actual number of work history spells needed to complete the work history for 1990. These data are available as a separate file. Refer to Section I, Part 7 of this volume for more detail.

00. Inap.: no wife/"wife" in FU (V19694=2 or 3); working now or only temporarily laid off (V19695=1 or 2 or V19697=1); never worked (V19859=5 or 9); last worked before 1990 (V19861=01-89, 97-99); no other main-job employer during 1990 (V19900=5 or 9)

V19933 'E52 WTR VACATION (WF-U)' TLOC= 1757 MD=9

E52. We're interested in how your (wife/"WIFE") spent her time from January through December 1990, regardless of whether or not she was employed. I know you may have given me some of this information already, but my instructions are to ask these questions of everybody. Did she take any vacation or time off during 1990?

149  1.4  1. Yes
375  2.8  5. No
6   0.0  9. NA; DK

8,833  95.8  0. Inap.: no wife/"wife" in FU (V19694=2 or 3); working now or only temporarily laid off (V19695=1 or 2 or V19697=1); never worked (V19859=5 or 9); last worked before 1990 (V19861=01-89, 97-99)
V19934 'E53 #WKS VACATION (WF-U)' TLOC= 1758-1759 MD=99  
E53. How much vacation or time off did she take?  
% nonzero = 1.4  
mean nonzero, excluding missing data = 4.7  
The values for this variable represent the actual number of weeks (01-52) of vacation or time off taken by the Wife/"Wife".  
01. One week or less  
99. NA; DK  
00. Inap.: no wife/"wife" in FU (V19694=2 or 3); working now or only temporarily laid off (V19695=1 or 2 or V19697=1); never worked (V19859=5 or 9); last worked before 1990 (V19861=01-89, 97-99); took no vacation or time off (V19933=5 or 9)

E91. About how much did she make at this? - ALL EXTRA JOBS EXCEPT FIRST

% nonzero: no nonzero cases for 1991 data
mean nonzero, excluding missing data (with implied decimals): no non-zero cases for 1991 data

The values for this variable represent dollars and cents per hour. If the amount was given as something other than an hourly rate, the same rules as those for V19706 were used. If Wife/"Wife" had more than two extra jobs, the value here represents a weighted average hourly wage from all of them except the first one.

OSIRIS USERS:
Note that this variable is defined in the dictionary as having no decimal places.

9998. $99.98 or more per hour

9999. NA; DK
0000. Inap.: no wife/"wife" in FU (V19694=2 or 3); working now or only temporarily laid off (V19695=1 or 2 or V19697=1); never worked (V19859=5 or 9); last worked before 1990 (V19861=01-89, 97-99); no extra jobs (V19948=5 or 9); only one extra job (V19949=1)

V19977 'E92 WK XTRA JOB2+(W-U)' TLOC= 1829-1830 MD=99

E92. And, how many weeks did she work on this extra job in 1990?-ALL EXTRA JOBS EXCEPT FIRST

% nonzero: no nonzero cases for 1991 data
mean nonzero, excluding missing data: no nonzero cases for 1991 data

The values for this variable represent the actual number of weeks (01-52) Wife/"Wife" worked on all of her extra jobs except the first one.

01. One week or less
99. NA; DK

00. Inap.: no wife/"wife" in FU (V19694=2 or 3); working now or only temporarily laid off (V19695=1 or 2 or V19697=1); never worked (V19859=5 or 9); last worked before 1990 (V19861=01-89, 97-99); no extra jobs (V19948=5 or 9); only one extra job (V19949=1)

V19978 'E93 AV HR/WK X JB2+(W-U)' TLOC= 1831-1832 MD=99

E93. On the average, how many hours a week did she work on this job?-ALL EXTRA JOBS EXCEPT FIRST

% nonzero: no nonzero cases for 1991 data
mean nonzero, excluding missing data: no nonzero cases for 1991 data

The values for this variable represent the actual number of hours per week Wife/"Wife" worked. If Wife/"Wife" had more than two extra jobs, the value here represents a weighted average of hours spent on all extra jobs except the first one.

01. One hour or less
98. Ninety-eight hours or more
99. NA; DK

00. Inap.: no wife/"wife" in FU (V19694=2 or 3); working now or only temporarily laid off (V19695=1 or 2 or V19697=1); never worked (V19859=5 or 9); last worked before 1990 (V19861=01-89, 97-99); no extra jobs (V19948=5 or 9); only one extra job (V19949=1)

V19996 'F1 CKPT:TYPE HEAD+WIFE ' TLOC= 1854

F1. INTERVIEWER CHECKPOINT

5,322 52.5 1. Head is male with Wife/"Wife" in FU
1,267 15.9 2. Head is male with no Wife/"Wife" in FU
2,774 31.6 3. Head is female

V19997 'F2 HOUSEWORK HRS-WIFE ' TLOC= 1855-1856 MD=99

F2. About how much time does your (wife/"WIFE") spend on housework in an average week? I mean time spent cooking, cleaning, and doing other work around the house.

% nonzero = 52.1
mean nonzero, excluding missing data = 22.8
The values for this variable in the range 00-84 represent the actual number of hours per week Wife/"Wife" spent on housework.

- 01. One hour or less
- 99. NA; DK
- 00. Inap.: none; no wife/"wife" in FU (V19996=2 or 3)

V19998 'F3 HOUSEWORK HOURS-HEAD' TLOC= 1857-1858 MD=99

F3. About how much time do you (HEAD) spend on housework in an average week? (I mean time spent cooking, cleaning, and doing other work around the house.)

% nonzero = 88.8
mean nonzero, excluding missing data = 11.0

The values for this variable in the range 00-84 represent the actual number of hours per week Head spent cooking, cleaning, and doing other work around the house.

- 01. One hour or less
- 99. NA; DK
- 00. None

V19999 'F5 FAM TOGETHR MAIN MEAL' TLOC= 1859 MD=9

F5. How many days a week does the family sit down and eat the main meal of the day together?

<table>
<thead>
<tr>
<th>Days per week</th>

V20000 'F7 COST CHILD CARE 1990' TLOC= 1860-1864 MD=99999

F7. How much did you (and your family living there) pay for child care in 1990?

% nonzero = 12.1
mean nonzero, excluding missing data = 1,962.5
The values for this variable in the range 00001-99997 represent the annual amount paid for child care.

99998. $99,998 or more
99999. NA; DK
00000. Inap.: no one under age 15 in FU

V20001 'G2 WHETHER HEAD FARMER ' TLOC= 1865 MD=9

G2. INTERVIEWER CHECKPOINT

68 1.1 1. Head is a farmer or rancher (V19401=801)
9,289 98.9 5. Head is not a farmer or rancher (V19401=•/801)
6 0.0 9. NA; DK

V20002 'G3 TOTAL FARM RECEIPTS ' TLOC= 1866-1871 MD=999999

G3. What were your total receipts from farming in 1990, including soil bank payments and commodity credit loans?

% nonzero = 1.0
mean nonzero, excluding missing data = 164,081.4

The values for this variable in the range 000001-999997 represent total receipts from farming in whole dollars.

99998. $999,998 or more
99999. NA; DK
000000. Inap.: not a farmer or rancher (V20001=5 or 9)

V20003 'G6 WHETHER BUSINESS ' TLOC= 1872 MD=9

G6. Did you (or anyone else in the family there) own a business at any time in 1990 or have a financial interest in any business enterprise?

979 12.9 1. Yes
8,370 86.9 5. No
14 0.2 9. NA; DK

V20004 'G7 TYPE BUS HAVE INT IN ' TLOC= 1873-1874 MD=99

G7. What kind of business was that?

The values in parentheses to the right of the code descriptions represent the comparable three-digit code values from the 1970 Census industry code. See the note at V19402 for a full description of this volume.

4,283 49.9 00. Inap.: none; atheist; agnostic; no wife/"wife" in FU (V20033=5)

V20080 'K44 #YRS WRKD SINCE 18 W' TLOC= 1987-1988 MD=99

K44. How many years altogether has your (wife/"WIFE") worked for money since she was 18?

% nonzero = 50.0
mean nonzero, excluding missing data = 13.2

See the notes above and preceding V20034.

The values for this variable represent in whole years the actual amount of time the Wife/"Wife" had worked since the age of 18 until the time of the interview. In 1985, this question was reasked only of then-current Wives/"Wives" who had worked at all since January 1, 1984; all other 1985 Wives/"Wives" were updated. See Section I, Part 5, p. 72 in the Wave XX (1987) documentation for details.

01. One year or less
98. Ninety-eight years or more
99. NA; DK
00. Inap.: never worked; wife/"wife" was under age 18 when this question was asked; no wife/"wife" in FU (V20033=5)

K45. How many of these years did she work full-time for most or all of the year?

% nonzero = 46.4
mean nonzero, excluding missing data = 11.0

See the notes preceding V20034 and V20080.

The values for this variable represent in whole years the actual amount of time the Wife/"Wife" had worked full time since the age of 18 until the time of the interview. In 1985, this question was reasked only of then-current Wives/"Wives" who had worked at all since January 1, 1984; all other 1985 Wives/"Wives" were updated. See Section I, Part 5, p. 72 in the Wave XX (1987) documentation for details.

01. One year or less

99. NA; DK

00. Inap.: never worked full time; wife/"wife" was under age 18 when this question was asked; no wife/"wife" in FU (V20033=5); never worked (V20080=00)

L1. INTERVIEWER CHECKPOINT

640 5.9 1. Reinterview family and FU has new head this year; splitoff family

8,723 94.1 5. All others (head is the same head as in 1990)

NOTE: V20083-V20155 are asked only when the FU acquires a new Head. In cases where the Head has remained the same person from the previous interview, these variables have been carried forward from the previous year's data with no updating or other change. Values for V20083-V20099 were brought forward from 1985 or earlier years, as indicated by V20219, but V20100-V20155 were asked of all Heads in 1985. See V20219 for the recency of this background information.

L2. Now I have some questions about your (HEAD'S) family and past experiences. Where did your father grow up? [MOST OF THE YEARS FROM AGES 6 TO 16--ACCEPT FATHER SUBSTITUTE]-FATHER'S STATE
See the note above.

Please refer to Appendix 1, wave XIV (1981) documentation, for PSID state and county codes.

99. NA; DK state

00. Inap.: foreign country

V20084 'L2 CNTY FA GREW UP HD' TLOC= 1994–1996 MD=999

L2. Now I have some questions about your (HEAD'S) family and past experiences. Where did your father grow up? [MOST OF THE YEARS FROM AGES 6 TO 16--ACCEPT FATHER SUBSTITUTE]–FATHER'S COUNTY

See the note preceding V20083.

Please refer to Appendix 1, wave XIV (1981) documentation, for PSID state and county codes.

999. NA; DK county

L3. Where did your mother grow up? [ACCEPT MOTHER SUBSTITUTE]–MOTHER'S STATE

See the note preceding V20083.

Please refer to Appendix 1, wave XIV (1981) documentation, for PSID state and county codes.

99. NA; DK state

00. Inap.: foreign country

V20086 'L3 CNTY MO GREW UP HD' TLOC= 1999–2001 MD=999

See the note preceding V20083.

Please refer to Appendix 1, wave XIV (1981) documentation, for PSID state and county codes.

999. NA; DK county

V20087 'L4 OCCUPATION OF FA HD' TLOC= 2002 MD=9

L4. What was your father's usual occupation when you were growing up? [ACCEPT FATHER SUBSTITUTE]

See the note preceding V20083.
1. Professional, technical, and kindred workers
2. Managers, officials, and proprietors
3. Self-employed businessmen
4. Clerical and sales workers
5. Craftsmen, foremen, and kindred workers
6. Operatives and kindred workers
7. Laborers and service workers, farm laborers
8. Farmers and farm managers
9. Miscellaneous (armed services, protective workers); NA; DK

0. Inap.: no father/surrogate; deceased; never worked

```
V20088 'L5 FIRST OCCUPATION HD' TLOC= 2003 MD=9
L5. Thinking of your (HEAD'S) first full-time regular job, what did you do?
See the note preceding V20083.
```

1. Professional, technical, and kindred workers
2. Managers, officials, and proprietors
3. Self-employed businessmen
4. Clerical and sales workers
5. Craftsmen, foremen, and kindred workers
6. Operatives and kindred workers
7. Laborers and service workers, farm laborers
8. Farmers and farm managers
9. Miscellaneous (armed services, protective workers); NA; DK

0. Inap.: never worked

```
V20089 'L6 # DIFF JOBS OR? HD' TLOC= 2004 MD=9
L6. Have you had a number of different kinds of jobs, or have you mostly worked in the same occupation you started in, or what?
See the note preceding V20083.
```

1. Have had a number of different kinds of jobs; mentions more than two kinds of jobs
2. Both; have had a number of different kinds of jobs but mostly the same occupation; mentions two kinds of jobs
3. Mostly the same occupation; same job all of working life
4. NA; DK
```

0. Inap.: never worked (V20088=0)
V20090 'L7 GREW UP FARM OR? HD' TLOC= 2005 MD=9

L7. Did you (HEAD) grow up on a farm, in a small town, in a large
city, or what?

See the note preceding V20083.

1,979 21.7 1. Farm; rural area; country
3,533 41.9 2. Small town; any size town, suburb
3,574 32.8 3. Large city; any size city
127 2.0 4. Other; several different places; combination of
places
150 1.4 9. NA; DK

V20091 'L8-9 STATE GREW UP HD' TLOC= 2006-2007 MD=99

L8. In what state and county was that?
L9. What was the name of the nearest town?-STATE

See the note preceding V20083.

Please refer to Appendix 1, wave XIV (1981) documentation, for PSID
state and county codes.

99. NA; DK state
00. Inap.: foreign country

V20092 'L8-9 CNTY GREW UP HD' TLOC= 2008-2010 MD=999

L8. In what state and county was that?
L9. What was the name of the nearest town?-COUNTY

See the note preceding V20083.

Please refer to Appendix 1, wave XIV (1981) documentation, for PSID
state and county codes.

999. NA; DK county

V20093 'L8-10 #REGIONS LIVED HD' TLOC= 2011 MD=9

L8. In what state and county was that?
L9. What was the name of the nearest town?
L10. What other states or countries have you lived in, including time
spent abroad while in the armed forces?-TOTAL NUMBER OF REGIONS
LIVED IN

mean, excluding missing data = 1.7

See the note preceding V20083.
The region current at the time these questions were actually asked was also taken into account for the coding of this variable.

4,624  53.8  1. Lived in one region
2,934  27.3  2. Lived in two regions
945   10.0  3. Lived in three regions
341   4.5   4. Lived in four regions

V20161  ' # OF INDIVIDUAL RECORDS '  TLOC= 2114-2115

Total Number of Individual Data Records Associated with 1991 Family Unit

The values for this variable represent the number of individual-level data records on the merged family-individual tape having the same family-level data in 1991, that is, all persons in the family in 1991 and any institutionalized individuals associated with the family, as well as any movers-out between 1990 and 1991 who are not included in another responding family.

V20162  ' H+W 1990 FED TAXES '  TLOC= 2116-2121  MD=999999

Total Estimated Federal Income Taxes of 1991 Head and Wife/"Wife" for 1990 Tax Year

% nonzero = 77.8
mean nonzero, including negative values and excluding missing data = 5,210.3

The values for this variable in the range -00953 through 999997 represent the actual estimate made for taxes.

V20162 and V20163 were computed using the following variables:

V19151 Taxable Income of Head and Wife/"Wife"
V19156 Total Number of Exemptions
V19157 Tax Table Used

Negative values are allowed for this variable for those eligible for the earned income credit and whose taxes are less than the amount of the credit. For highly detailed information on the PSID's estimation of taxes, see the 1985 (wave XVIII) documentation volume, pp. 91-100. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

-00953. Negative taxes for those with the maximum earned income credit
00000. None
999998. $999,998 or more
999999. NA

V20163  ' H+W 90 MARGINAL TAX RATE '  TLOC= 2122-2123  MD=99

Marginal Tax Rate for 1991 Head's and Wife's/"Wife's" 1990 Estimated Federal Income Taxes

% nonzero = 73.7
mean nonzero, excluding missing data = 20.4

The values for this variable represent the actual marginal tax rate based on Head and Wife's/"Wife's" taxable income, number of exemptions, and the tax table used. See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99. NA

00. Zero taxes

V20164 '1ST XTRA ERNER 90 TAXES ' TLOC= 2124- 2128 MD=99999

Estimated Federal Income Taxes of First Extra Earner for 1990 Tax Year

% nonzero = 14.6

mean nonzero, including negative values and excluding missing data = 1,590.2

The values for this variable in the range -0953 through 99997 represent the actual estimate made for taxes. Negative values are allowed here for former Heads and Wives/"Wives" eligible for the earned income credit and whose taxes are less than the amount of the credit. Incomes for those who are not current Heads or Wives/"Wives" are coded only for the part of the year that they were in the family in 1990. This estimate of tax liability takes account of that fact. See Section I, Part 5 of this volume for further details.

V20164 and V20165 were computed using the following variables:

V19276 Percent Proration of First Extra Earner
V19277 Taxable Income
V19278 Total Number of Exemptions
V19279 Tax Table Used

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

-0953. Negative taxes for those with the maximum earned income credit

99998. $99,998 or more

99999. NA

00000. Inap.: none; no such person

V20165 'MARG TAX RATE ERNR ONE ' TLOC= 2129- 2130 MD=99

Marginal Tax Rate of First Extra Earner for 1990 Tax Year
% nonzero = 14.6
mean nonzero, excluding missing data = 17.4

The values for this variable represent the actual marginal tax rate based on this person’s percent proration, taxable income, number of exemptions, and the tax table used.

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99. NA
00. Inap.: zero taxes; no such person

V20166  '2ND XTRA ERNER 90 TAXES '  TLOC= 2131-2135  MD=99999

Estimated Federal Income Taxes of Second Extra Earner for 1990 Tax Year

% nonzero = 2.9
mean nonzero, excluding missing data = 813.5

The values for this variable in the range 00001-99997 represent the actual estimate made for taxes. Incomes for those who are not current Heads or Wives/"Wives" are coded only for the part of the year that they were in the family in 1990. This estimate of tax liability takes account of that fact. See Section I, Part 5 of this volume for further details.

V20166 and V20167 were computed using the following variables:

   V19281 Percent Proration of Second Extra Earner
   V19282 Taxable Income
   V19283 Total Number of Exemptions
   V19284 Tax Table Used

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99998. $99,998 or more
99999. NA
00000. Inap.: none; no such person

V20167  'MARG TAX RATE ERNR TWO '  TLOC= 2136-2137  MD=99

Marginal Tax Rate of Second Extra Earner for 1990 Tax Year

% nonzero = 2.9
mean nonzero, excluding missing data = 15.8
The values for this variable represent the actual marginal tax rate based on this person's percent proration, taxable income, number of exemptions, and the tax table used.

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99. NA
00. Inap.: zero taxes; no such person

V20168  '3RD XTRA ERNER 90 TAXES'  TLOC= 2138-2142  MD=99999

Estimated Federal Income Taxes of Third Extra Earner for 1990 Tax Year

% nonzero = 0.6
mean nonzero, excluding missing data = 741.2

The values for this variable in the range 00001-99997 represent the actual estimate made for taxes. Incomes for those who are not current Heads or Wives/"Wives" are coded only for the part of the year that they were in the family in 1990. This estimate of tax liability takes account of that fact. See Section I, Part 5 of this volume for further details.

V20168 and V20169 were computed using the following variables:

V19286 Percent Proration of Third Extra Earner
V19287 Taxable Income
V19288 Total Number of Exemptions
V19289 Tax Table Used

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99998. $99,998 or more
99999. NA
00000. Inap.: none; no such person

V20169  'MARG TAX RATE ERNR THREE'  TLOC= 2143-2144  MD=99

Marginal Tax Rate of Third Extra Earner for 1990 Tax Year

% nonzero = 0.6
mean nonzero, excluding missing data = 15.0

The values for this variable represent the actual marginal tax rate based on this person's percent proration, taxable income, number of exemptions, and tax table used.
See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99. NA

00. Inap.: zero taxes; no such person

V20170 '4TH EXTRA EARNER 90 TAXES' TLOC= 2145-2149 MD=99999

Estimated Federal Income Taxes of Fourth Extra Earner for 1990 Tax Year

% nonzero = 0.1

mean nonzero, excluding missing data = 586.5

The values for this variable in the range 00001-99997 represent the actual estimate made for taxes. Incomes for those who are not current Heads or Wives/Wives are coded only for the part of the year that they were in the family in 1990. This estimate of tax liability takes account of that fact. See Section 1, Part 5 of this volume for further details.

V20170 and V20171 were computed using the following variables:

V19291 Percent Proration of Fourth Extra Earner
V19292 Taxable Income
V19293 Total Number of Exemptions
V19294 Tax Table Used

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

99998. $99,998 or more

99999. NA

00000. Inap.: none; no such person

V20171 'MARG TAX RATE EARNER FOUR' TLOC= 2150-2151 MD=99

Marginal Tax Rate of Fourth Extra Earner for 1990 Tax Year

% nonzero = 0.1

mean nonzero, excluding missing data = 15.0

The values for this variable represent the actual marginal tax rate based on this person's percent proration, taxable income, number of exemptions, and tax table used.

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.
Estimated Federal Income Taxes of Fifth Extra Earner for 1990 Tax Year

% nonzero = 0.0
mean nonzero, excluding missing data = 522.9

The values for this variable in the range 00001-99997 represent the actual estimate made for taxes. Incomes for those who are not current Heads or Wives/"Wives" are coded only for the part of the year that they were in the family in 1990. This estimate of tax liability takes account of that fact. See Section I, Part 5 of this volume for further details.

V20172 and V20173 were computed using the following variables:

V19296 Percent Proration of Fifth Extra Earner
V19297 Taxable Income
V19298 Total Number of Exemptions
V19299 Tax Table Used

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

Marginal Tax Rate of Fifth Extra Earner for 1990 Tax Year

% nonzero = 0.0
mean nonzero, excluding missing data = 15.0

The values for this variable represent the actual marginal tax rate based on this person's percent proration, taxable income, number of exemptions, and tax table used.

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.
V20174 'TOT TAXES ALL XTRA ERNR ' TLOC= 2159- 2164 MD=999999
Total Estimated Federal Income Taxes of All Extra Earners for 1990 Tax Year
% nonzero = 14.7
mean nonzero, including negative values and excluding missing data = 1,752.6

The values for this variable in the range -00953 through 999997 represent the actual estimate made for taxes. Negative values may occur in this variable if a former Head or Wife/"Wife," as first extra earner, has negative values at V20164.

See the 1985 (wave XVIII) documentation volume, pp. 91-100, for a complete description of the tax variables. Additionally, check Section 1, Part 5 of this volume for updating rules since then.

-00953. Negative taxes for those with the maximum earned income credit
999998. $999,998 or more
999999. NA
000000. Inap.: none (V20164=0)

V20175 'TOT FAM MONEY Y 90 ' TLOC= 2165- 2171
Total 1990 Family Money Income
mean = 37,691.6

Negative amounts and zeroes are not allowed for this variable because it is used in the generation of the income/needs ratio. The values represent the summation of the following variables:

V19151 Taxable Income of Head and Wife/"Wife"
V19201 Total Transfers of Head and Wife/"Wife"
V19301 Taxable Prorated Income of Others
V19317 Total Prorated Transfers of Others

0000001. One dollar or less, including zero and negative amounts
9999999. $9,999,999 or more

V20176 'P TOT FAM MNY Y 90 ACC>1' TLOC= 2172- 2174
Percent of Total 1990 Family Money Income That Was a Major Assignment

% nonzero = 9.7
mean nonzero = 46.4
The values for this variable in the range 001-100 represent the amount of family money income that required a major assignment, expressed as a percent. This variable was calculated by summing the following:

V19129 (head's wages) if V17830 (accuracy of head's wages) equalled 2;
V19127 (head's labor income from farming), V19128 (head's labor income from business), V19131 (head's bonuses, overtime and commissions), V19132 (head's income from professional practice or trade), V19133 (head's labor income from market gardening), and V19134 (head's labor income from roomers and boarders) if V19135 (accuracy of head's non-wage labor income) equalled 2;
V19136 (wife's labor income) if V19137 (accuracy of wife's labor income) equalled 2;
V19146 (head's interest and dividends) and the absolute values of V19138 (head's and wife's asset income from farming), V19139 (head's and wife's asset income from business), V19140 (head's and wife's asset income from market gardening), V19141 (head's and wife's asset income from roomers and boarders), V19144 (head's rent income), and V19149 (wife's labor income) if V19150 (accuracy of head's and wife's labor income) equalled 2;
V19159 (head's ADC/AFDC) if V19160 (accuracy of head's ADC/AFDC) equalled 2;
V19180 (wife's ADC/AFDC) if V19181 (accuracy of wife's ADC/AFDC) equalled 2;
V19201 (head's and wife's total transfers) minus V19159 (head's ADC/AFDC) and V19180 (wife's ADC/AFDC) if V19200 (accuracy of head's and wife's total transfers except ADC/AFDC) equalled 2;
the absolute value of V19301 (total taxable income of other FU members) if V19302 (accuracy of other FU members' total taxable income) equalled 2; and
V19317 (total transfers of other FU members) if V19318 (accuracy of other FU members' total transfers) equalled 2.

This sum was divided by the sum of these same components without the accuracy code value restriction but using absolute values to produce the percent of assigned income.

000. No portion of family money income was a major assignment

V20177 'P TOT FAM MNY Y 90 ACC>0' TLOC= 2175-2177

Percent of Total 1990 Family Money Income That Was Assigned

% nonzero = 11.8
mean nonzero = 49.2

The values for this variable in the range 001-100 represent the amount of family money income that required an assignment, expressed as a percent. This variable was calculated by summing the following:

V19129 (head's wages) if 17830 (accuracy of head's wages) equalled 1 or 2;
V19127 (head's labor income from farming), V19128 (head's labor income from business), V19131 (head's bonuses, overtime and commissions), V19132 (head's income from professional practice or trade), V19133 (head's labor income from market gardening), and V19134 (head's labor income from roomers and boarders) if V19135 (accuracy of head's non-wage labor income) equalled 1 or 2; V19136 (wife's labor income) if V19137 (accuracy of wife's labor income) equalled 1 or 2; V19138 (head's and wife's asset income from farming), V19139 (head's and wife's asset income from business), V19140 (head's and wife's asset income from market gardening), V19141 (head's and wife's asset income from roomers and boarders), V19144 (head's rent income), and V19149 (wife's asset income) if V19150 (accuracy of head's and wife's asset income) equalled 1 or 2; V19159 (head's ADC/AFDC) if V19160 (accuracy of head's ADC/AFDC) equalled 1 or 2; V19180 (wife's ADC/AFDC) if V19181 (accuracy of wife's ADC/AFDC) equalled 1 or 2; V19201 (head's and wife's total transfers) minus V19159 (head's ADC/AFDC) and V19180 (wife's ADC/AFDC) if V19200 (accuracy of head's and wife's total transfers except ADC/AFDC) equalled 1 or 2; the absolute value of V19301 (total taxable income of other FU members) if V19302 (accuracy of other FU members' total taxable income) equalled 1 or 2; and V19317 (total transfers of other FU members) if V19318 (accuracy of other FU members' total transfers) equalled 1 or 2.

This sum was divided by the sum of these same components without the accuracy code value restriction but using absolute values to produce the percent of assigned income.

000. No portion of family money income was assigned

V20178 'TOTAL HEAD LABOR Y 90 ' TLOC= 2178- 2183

Total 1990 Labor Income of 1991 Head

% nonzero = 73.8
mean nonzero = 28,611.2

The values for this variable represent the actual amount of Head's labor income in whole dollars and sum the following variables:

V19127 Labor Part of Farm Income
V19128 Labor Part of Business Income
V19129 Head's Wages Income
V19131 Head's Bonuses, Overtime, Commissions
V19132 Head's Income from Professional Practice or Trade
V19133 Labor Part of Market Gardening Income
V19134 Labor Part of Roomers and Boarders Income
999999. $999,999 or more
000000. None; Head did no work for money in 1990

V20179 'P TOT HD LAB Y 90 ACC>1 ' TLOC= 2184- 2186

Percent of Head's Total 1990 Labor Income That Was a Major Assignment

% nonzero = 2.5
mean nonzero = 86.5

The values for this variable in the range 001-100 represent the amount of head's labor income that required an assignment, expressed as a percent. This variable was calculated by summing the following:
V19129 (head's wages) if 17830 (accuracy of head's wages) equalled 2; and
V19127 (head's labor income from farming), V19128 (head's labor income from business), V19131 (head's bonuses, overtime and commissions), V19132 (head's income from professional practice or trade), V19133 (head's labor income from market gardening), and V19134 (head's labor income from roomers and boarders) if V19135 (accuracy of head's non-wage labor income) equalled 2.

This sum was divided by the sum of these same components without the accuracy code value restriction and using absolute values to produce the percent of assigned income.

000. No portion of head's labor income was a major assignment

V20180 'P TOT HD LAB Y 90 ACC>0 ' TLOC= 2187- 2189

Percent of Head's Total 1990 Labor Income That Was Assigned

% nonzero = 3.3
mean nonzero = 88.4

The values for this variable in the range 001-100 represent the amount of head's labor income that required an assignment, expressed as a percent. This variable was calculated by summing the following:
V19129 (head's wages) if 17830 (accuracy of head's wages) equalled 1 or 2; and
V19127 (head's labor income from farming), V19128 (head's labor income from business), V19131 (head's bonuses, overtime and commissions), V19132 (head's income from professional practice or trade), V19133 (head's labor income from market gardening), and V19134 (head's labor income from roomers and boarders) if V19135 (accuracy of head's non-wage labor income) equalled 1 or 2.

This sum was divided by the sum of these same components without the accuracy code value restriction and using absolute values to produce the percent of assigned income.

000. No portion of head's labor income was assigned
GENERATED DATA

V20181 'WEEKLY FOOD NEEDS-1991 ' TLOC= 2190- 2194

Weekly Food Needs--1967 USDA LOW-COST PLAN

mean = 15.418 (with implied decimals)

This variable's values are based on USDA Low-Cost Plan estimates of
weekly food costs, according to the table below (reproduced from Fam-
ily Economics Review, June 1967), summed for the family as it was at
the time of the interview.

Please refer to the wave VII (1974) documentation volume, pp. 39-41,
for a complete description of the PSID's use of these standards.

INDIVIDUAL FOOD STANDARD (LOW COST)

$3.90 for both males and females under age 4
$4.60 for both males and females age 4-6
$5.50 for both males and females age 7-9
$6.40 for males age 10-12
$6.30 for females age 10-12
$7.40 for males age 13-15
$6.90 for females age 13-15
$8.70 for males age 16-20
$7.20 for females age 16-20
$7.50 for males age 21-35
$6.50 for females age 21-35
$6.90 for males age 36-55
$6.30 for females age 36-55
$6.30 for males age 56 and older
$5.40 for females age 56 and older

This same standard has been used in Waves I-XX. Adjustments for in-
flation, etc., are left to users. The actual weekly food needs in
dollars and cents are coded here.

OSIRIS USERS: Note that this variable is defined in the dictionary as
having two decimal places.

V20182 'ANNUAL NEEDS STD-1990 ' TLOC= 2195- 2199

Annual Needs Standard for the 1990 (Last Year's) Family

mean = 2,933.3

This is the Orshansky-type poverty threshold based on an annual food
needs standard which is derived from the weekly food costs in the
preceding variable, converted to an annual amount, and adjusted for
economies of scale by USDA rules as follows:

Single person . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . add 20%
Two persons . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . add 10%
Three persons . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . add 5%
Four persons . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . no change
Five persons . . . . . . . . . . . . . . . . . . deduct 5%
Six or more persons . . . . . . . . . . . . . . . . . . deduct 10%

An additional adjustment for diseconomies of small households (in rent, etc.) was made as follows:

- 4.89 times the food needs for single persons
- 3.70 times the food needs for two-person units
- 3.00 times the food needs for all other units

Please refer to the Wave VII (1974) Documentation volume, pp. 39-41, and to the User Guide for further details on the need standard. Note that this variable is not adjusted for inflation, nor is it exactly comparable to the official poverty standard; such changes are left to users. This need standard is adjusted for changes in family composition during 1990 and is not adjusted for farmers; see V20183 for an income/needs measure which makes such an adjustment.

V20183 '1990 TOT FAM Y/NEEDS ' TLOC= 2200- 2204

1990 Total Family Money Income/Needs for 1990 Family (Income/needs ratio)--1967 USDA LOW-COST PLAN

mean = 12.812 (with implied decimals)

The formula used in generating this variable is as follows:

Total 1990 Family Money Income (V20175)/1990 Family Needs (V20182).

This ratio is multiplied by 1.25 for farmers (those coded 801 in V19401, V19502 or V19525) to adjust for lower food costs. This is the only measure of income to needs on this tape which makes this adjustment for farmers. For a full description on the needs standard used, please refer to the Wave VII (1974) Documentation volume, pp. 39-41. Note that this need standard has not been adjusted for inflation.

OSIRIS USERS: Note that this variable is defined in the dictionary as having two decimal places.

99999. Income/needs ratio of 999.99 or more

V20184 'ANNUAL NEEDS STD-CENSUS ' TLOC= 2205- 2209

Annual Needs Standards-Census

mean = 9,675.5

This poverty threshold was taken from Table A-2 on p. 195 of the U.S. Census' Current Population Reports, Series P-60, No. 175, Poverty in the United States: 1990. The threshold values are based on family size, the number of persons in the family under age 18, and the age of the householder. This variable has been adjusted for changes in family composition during 1990 so that it matches part-year incomes included in the total family money income (V20175). Please refer to
Section I, Part 5 of this volume for further details about the generation process and a reproduction of Table A-2.

V20185 'TOT FAM Y/NEEDS-CENSUS' TLOC= 2210-2213

Total Family Y/Needs-Census
mean = 3.897 (with implied decimals)
The formula used in generating this variable is as follows:

For a full description of the Census poverty threshold, please refer to Section I, Part 5 of this volume.

OSIRIS USERS: Note that this variable is defined in the dictionary as having two decimal places.

9999. Income/needs ratio of 99.99 or more

V20186 'ANNUAL FOOD STD' TLOC= 2214-2217

Annual Food Standard for the 1991 (Current) Family--1967 USDA LOW-COST PLAN
mean = 838.3

This variable is generated by multiplying weekly food needs (V20181) by 52 and then making the following adjustments for economies of scale:

+20% for one-person families
+10% for two-person families
+5% for three-person families
no adjustment for four-person families
-5% for five-person families
-10% for families with six or more persons

The values for weekly food needs are based on USDA Low-Cost Plan estimates of weekly food costs, according to the table below (reproduced from Family Economics Review, June 1967), summed for the family as it was at the time of the interview.

The values represent the actual annual food standard in whole dollars for the 1991 (current) family.

9999. Food standard of $9,999 or more

V20187 'HEAD 90 AVG HRLY EARNING' TLOC= 2218-2221

Average Hourly Earnings of 1991 Head in 1990
% nonzero = 73.7
mean nonzero = 13.604 (with implied decimals)

The values for this variable represent the Head's average hourly earnings in dollars and cents per hour. The formula used for this variable's generation is as follows:

1990 Labor Income of Head (V20178)/1990 Hours of Work of Head (V19044)

OSIRIS USERS: Note that this variable is defined in the dictionary as having two decimal places.

9999. $99.99 per hour or more
0000. Zero hourly earnings (V20178=0000); Head did not work for money (V19044=0000)

V20188 'WIFE 90 AVG HRLY EARNING' TLOC= 2222- 2225

Average Hourly Earnings of 1991 Wife/'Wife' in 1990

% nonzero = 35.0
mean nonzero = 10.402 (with implied decimals)

The values for this variable represent the Wife's/'Wife's' average hourly earnings in dollars and cents per hour. The formula used for this variable's generation is as follows:

1990 Labor Income of Wife/'Wife' (V19136)/1990 Hours of Work of Wife/'Wife' (V19074)

OSIRIS USERS: Note that this variable is defined in the dictionary as having two decimal places.

9999. $99.99 per hour or more
0000. Zero hourly earnings (V19136=0000); wife/'wife' did not work for money (V19074=0000); no wife/'wife' in FU (V19351=00)

V20190 'STATE CODE (FIPS)' TLOC= 2227- 2228 MD=99

State of Residence at Time of 1991 Interview (FIPS Code)

Please refer to the 1985 (wave XVIII) documentation, Volume I, Appendix 1, for the FIPS state codes.

99. NA; DK
00. Inap.: foreign country

V20191 'COUNTY CODE (FIPS)' TLOC= 2229- 2231 MD=999

County of Residence at Time of 1991 Interview (FIPS Code)

This variable is suppressed (filled with a field of zeroes) in the public release files to protect the anonymity of respondents. The codes are available in separate files to qualified users under special contractual arrangements with the PSID; for more information, contact Terry Adams at (313) 763-6868 or (BITNET) userHCAA@UMICHUM.

V20192 'RURAL-URBAN CODE (BEALE)' TLOC= 2232- 2233 MD=99

Beale-Ross Rural-Urban Continuum Code for 1991 Residence

These codes are based on matches to the FIPS state and county codes. However, code values have been increased by one. That is, code 01 here is equivalent to code 0 as originally used by Beale and Ross. Metropolitan status is that announced by the Office of Management and Budget in June 1983, when the current population criteria were first applied to results of the 1980 Census. Adjacency was determined by both physical boundary adjacency and a finding that at least 2 percent
of the employed labor force in the nonmetropolitan county commuted to metropolitan central counties.

V20195 'ACC 90 Y COMPONENTS ' TLOC= 2236

Accuracy of 1990 Money Income Components

The values for this variable represent the sum of the values for the following variables:

V19130 Accuracy: Head's wages income
V19135 Accuracy: Head's other labor income
V19137 Accuracy: Wife's/"Wife's" labor income
V19150 Accuracy: Asset income of Head and Wife/"Wife"
V19160 Accuracy: ADC/AFDC of Head
V19181 Accuracy: ADC/AFDC of Wife/"Wife"
V19200 Accuracy: Other transfers of Head and Wife/"Wife"
V19302 Accuracy: Taxable income of Others
V19318 Accuracy: Transfer income of Others

Sums greater than 9 were truncated at 9.

8,048 87.8  0. None
223  1.8  1. One
839  8.0  2. Two
46  0.3  3. Three
159  1.7  4. Four
13  0.1  5. Five
25  0.2  6. Six

 7  0.1  8. Eight
 2  0.0  9. Nine or more

V20196 '# MINOR ASSGMTS IN 91 ' TLOC= 2237- 2238

Number of Minor Assignments Made in 1990 Family-Level Data

% nonzero = 8.6
mean nonzero = 1.2

The values for this variable represent the summation of the number of codes equalling 1 (minor assignment) among the accuracy variables in the variable sequence V19024-V19054, V19068-V19084, V19100-V19112, V19127-V19200, and V19275-V19318; the maximum value is 37.

00. No minor assignments made

V20197 '# MAJOR ASSGMTS IN 91 ' TLOC= 2239- 2240

Number of Major Assignments Made in 1990 Family-Level Data
The values for this variable represent the summation of the number of codes equalling 2 or 3 (major assignment) among the accuracy variables in the variable sequence V19024-V19054, V19068-V19084, V19100-V19112, V19127-V19200, and V19275-V19318; the maximum value is 37.

00. No major assignments made

V20198 'COMPLETED ED-HD 91 ' TLOC= 2241-2242 MD=99

1991 Head's Completed Education Level

% nonzero = 99.6
mean nonzero = 12.5

This variable is identical to the individual-level variable V30703. Values in the range 01-16 represent the actual grade of school completed, e.g., a value of 08 indicates that the Head completed the eighth grade. A code value of 17 indicates that the Head completed at least some postgraduate work. This variable contains values from 1991 family-level data, although information about completed education is not asked annually. Values were computed as follows: if V20131 is greater than zero, then completed education equals 12 plus the value for V20131. For the remaining cases, a value of 1 at V20117 was converted to a value of 12. Otherwise, completed education equals V20120 plus V20125. Education was reasked of all Heads in 1985. See V20219 for the recency of this information.

99. NA; DK
00. Inap: completed no grades of school

V20199 'COMPLETED ED-WF 91 ' TLOC= 2243-2244 MD=99

1991 Wife's/"Wife's" Completed Education Level

% nonzero = 52.3
mean nonzero = 12.6

This variable is identical to the individual-level variable V30703. Values in the range 01-16 represent the actual grade of school completed, e.g., a value of 08 indicates that the Wife/"Wife" completed the eighth grade. A code value of 17 indicates that she completed at least some postgraduate work. This variable contains values from 1991 family-level data, although information about completed education is not asked annually. Values were computed as follows: if V20061 is greater than zero, then completed education equals 12 plus the value for V20061. For the remaining cases, a value of 1 at V20052 was converted to a value of 12. Otherwise, completed educa-
tion equals V20054 plus V20057. Education was reasked of all Wives/"Wives" in 1985. See V20220 for the recency of this information.

99. NA; DK

00. Inap: completed no grades of school; no wife/"wife" in FU (V19351=00)

V20200 'DECILE: 90 TOT FAM Y ' TLOC= 2245
Decile on Total 1990 Family Money Income (V20182)

These values were obtained from weighted data.

NOTE: The following variables, V20201-V20209, summate the actual number of children in the FU by various sex and age categories. Only persons whose relationships to Head are those of child, stepchild, grandchild, sibling or other relative, such as niece or nephew, are included (Relationship to Head=30, 33, 35, 37, 40, 47, 60, 65, 70-75, 95, 96). These variables are built by accessing individual-level data.

NOTE: Variables 20210-20213 are summaries of information about individuals in institutions, as coded on the individual-level dataset. Such an individual, in order to be included in the following four variables, must have the same 1991 ID number as this family (V30689 must equal V19002) and his or her sequence number (V30690) must equal 51-59. The "reason for nonresponse" variable (V30729) was consulted for the type of institution.

V20210  '# INDS IN ARMED FORCES '  TLOC= 2255

Number of Individuals in the Armed Forces

% nonzero = 0.7
mean nonzero = 1.0

The values for this variable represent the actual number of individuals (1-9) that were in the armed forces. Such individuals must conform to the rule above, and their values for V30729 must equal 11.

0. None

V20211  '# INDS INCARCERATED '  TLOC= 2256

Number of Individuals in Penal Institutions

% nonzero = 0.1
mean nonzero = 1.1

The values for this variable represent the actual number of individuals (1-9) who were incarcerated in penal institutions. Such individuals must conform to the rule preceding V20210; and their values for V30729 must equal 12.

0. None

V20212  '# INDS IN HLTH CARE FACL'  TLOC= 2257

Number of Individuals in a Health Care Facility

% nonzero = 0.2
mean nonzero = 1.3

The values for this variable represent the actual number of individuals (1-9) who were in health care facilities, such as mental institutions, convalescent, nursing and rest homes. Such individuals
must conform to the rule preceding V20210; and their values for V30729 must equal 13.

0. None

V20213  '# IND IN EDUCATNL FACIL'  TLOC=  2258

Number of Individuals in Educational Facilities
% nonzero = 2.0
mean nonzero = 1.1

The values for this variable represent the actual number of individuals (1-9) who were in educational facilities, usually colleges or universities, and who lived in dormitories, or if off-campus, were supported by someone other than themselves. Such individuals must conform to the rule preceding V20210; and their values for V30729 must equal 14.

0. None

V20214  'SPLIT SAMPLE FILTER'  TLOC=  2259

Split Sample Filter
This variable was created by randomly dividing the sample into four equal parts, based on the sampling area in which the family resided in 1968 for Core sample families or 1990 for Latino sample cases. See Section I, Part 5 of the 1990 (wave XXIII) documentation for further details.

2,426  25.0  1. First quarter sample
2,320  23.1  2. Second quarter sample
2,393  27.4  3. Third quarter sample
2,224  24.5  4. Fourth quarter sample

V20215  'CNTY UNEMP RATE-CENSUS'  TLOC=  2260-  2261  MD=99

1990 Annual Average Unemployment Rate for County of Residence

mean, excluding missing data = 5.6

The values for this variable represent the annual average unemployment rate, to the nearest whole percent, reported by the U.S. Bureau of Labor Statistics Local Area Unemployment Statistics Program, for the calendar year prior to the interview.

98. Ninety-eight percent or more
99. NA; DK; FU lives outside the United States; no information received about this family's county of residence

V20216  'MARITAL STATUS 1991'  TLOC=  2262
Marital Status of 1991 Head

This version of marital status is comparable to 1968-1976 data, in which no distinction was made between those legally married and those who merely cohabited.

<table>
<thead>

V20219 'YR NEW HEAD IN FU ' TLOC= 2265-2266 MD=99

Year in Which 1991 Head Most Recently Became New Head

This variable contains the last two digits of the year of data collection in which background information in V20083-V20099 was most recently gathered for the 1991 Head. If a Head splits off from the main family, e.g., through divorce, background information is reasked. Some of this information can change over time; thus, this variable can be used by the analyst to indicate which waves of data might be searched to update the variables concerned. However, in the 1985 wave, most background information (1991: V20100-V20155) was reasked. All Latino sample Heads were asked this information in 1990.

Current Head most recently was a new Head in 1991.

NA; collection of background data omitted in error for Head. Data for this case may refer to some former Head.

**V20220** 'YR NEW WIFE IN FU'  TLOC= 2267-2268

Year in Which 1991 Wife/"Wife" Most Recently Became New Wife/"Wife"

This variable contains the last two digits of the year of data collection in which background information was most recently gathered for the 1991 Wife/"Wife." If a Wife/"Wife" splits off from the main family, e.g., through divorce, background information is reasked. Some of this information can change over time; thus, this variable can be used by the analyst to indicate which waves of data might be searched to update the variables concerned. In 1985, all Wives/"Wives" were asked all of the background information (V20034-V20081). All Latino sample Wives/"Wives" were asked this information in 1990.

- 2,765 37.3 85. Current Wife/"Wife" has been Wife/"Wife" continuously since 1985
- 151 1.4 86. Current Wife/"Wife" most recently was a new Wife/"Wife" in 1986
- 192 1.6 87. Current Wife/"Wife" most recently was a new Wife/"Wife" in 1987
- 214 1.8 88. Current Wife/"Wife" most recently was a new Wife/"Wife" in 1988
- 229 2.1 89. Current Wife/"Wife" most recently was a new Wife/"Wife" in 1989
- 1,393 5.8 90. Current Wife/"Wife" most recently was a new Wife/"Wife" in 1990
- 369 2.3 91. Current Wife/"Wife" most recently was a new Wife/"Wife" in 1991
- 4,050 47.5 00. Inap.: no wife/"wife" in FU (V19351=00)

**V20221** 'HD-SPouse SAMPLE STATUS'  TLOC= 2269

Whether Head and Spouse Are Sample Members

For this variable, the term "spouse" includes Wife (V30691=20), "Wife" (V30691=22), or Husband (V30691=90).

- 2,057 22.9 1. Head and spouse are both sample members and their 1968 ID numbers are identical.
- 1 0.0 2. Head and spouse are both sample members but they have different 1968 ID numbers.
1,575  14.8  3. Head is a sample member, spouse is nonsample.
1,684  14.9  4. Head is nonsample, spouse is sample member.
3,949  47.3  5. Head is sample member, no spouse in FU.
12     0.0   6. Head and spouse are both nonsample.
85     0.1   7. Head is nonsample, no spouse in FU.

V20222  '# 91 S/O FROM THIS FAM '  TLOC=  2270

Number of 1991 Splitoff Interviews Taken from This Main Family Interview

The values for this variable represent the actual number of 1991 Splitoff interviews taken as a result of recontacting and reinterviewing the core sample main family; it is intended primarily for use as a linking variable.

303  3.1  1. One Splitoff interview from this main family
13   0.2  2. Two Splitoff interviews from this main family
  3  0.0  3. Three Splitoff interviews from this main family
  4  0.0  4. Four Splitoff interviews from this main family
  5  0.0  5. Five Splitoff interviews from this main family
  6  0.0  6. Six Splitoff interviews from this main family
  7  0.0  7. Seven Splitoff interviews from this main family
  8  0.0  8. Eight Splitoff interviews from this main family
  9  0.0  9. Nine or more splitoff interviews from this main family

9,044 96.6  0. Inap.: none; this is a splitoff interview (V19007=1)

V20223  '91 MAIN FAM ID FOR S/O '  TLOC=  2271- 2275

1991 Main Family ID for Splitoff

The values for this variable in the range 00001-09363 represent the actual interview number of the core sample main family associated with each splitoff.

00000. Inap.: this is a main family interview (V19007=0)
V20224 '91ID OF 1ST OTR FU IN HU'  TLOC=  2276- 2280

1991 Interview Number of the First Other Family Unit Sharing the Household with This Family

% nonzero = 6.8

Values for this variable in the range 00001-09363 represent the actual 1991 ID number of the first other family living with this one.

00000. No other panel family shares household (V19016=0, 5, 7, or 9)

V20225 'REL OF 1ST OTHER FU '  TLOC=  2281

Relationship of the Head (or Wife/"Wife") of the First Other Family Unit Sharing the Household to the Head (or Wife/"Wife") of this Family

255  2.8  1. The Head (or Wife/"Wife") of the first other FU is the parent of the Head (or Wife/"Wife") of this FU.

247  2.8  2. The Head (or Wife/"Wife") of the first other FU is the child of the Head (or Wife/"Wife") of this FU.

8   0.1  3. The Head (or Wife/"Wife") of the first other FU is the grandparent of the Head (or Wife/"Wife") of this FU.

8   0.1  4. The Head (or Wife/"Wife") of the first other FU is the grandchild of the Head (or Wife/"Wife") of this FU.

111  1.0  5. The Head (or Wife/"Wife") of the first other FU is the sibling of the Head (or Wife/"Wife") of this FU.

6   0.1  7. Other

8,728  93.2  0. Inap.: no other panel family shares the household (V19016=0, 5, 7, or 9)

V20226 'SIZE OF 1ST OTHER FU '  TLOC=  2282- 2283

Number of FU Members in First Other FU

The range of possible values for this variable is at least 01, but not more than 20. The code value represents the actual number of persons in the first other FU. There are no missing data.

00. No other panel family shares household (V19016=0, 5, 7, or 9)

V20227 '91ID OF 2ND OTR FU IN HU'  TLOC=  2284- 2288
1991 Interview Number of the Second Other PSID Family Unit Sharing the Household with This Family

% nonzero = 0.7

Values for this variable in the range 00001-09363 represent the actual 1991 ID number of the second other family living with this one.

00000. No other panel family shares the household (V19016=0, 5, 7 or 9); only one other panel family shares the household

V20228 'REL OF 2ND OTHER FU ' TLOC= 2289

Relationship of the Head (or Wife/"Wife") of the Second Other Family Unit Sharing the Household to the Head (or Wife/"Wife") of this Family

22 0.3 1. The Head (or Wife/"Wife") of the second other FU is the parent of the Head (or Wife/"Wife") of this FU.

26 0.2 2. The Head (or Wife/"Wife") of the second other FU is the child of the Head (or Wife/"Wife") of this FU.

3. The Head (or Wife/"Wife") of the second other FU is the grandparent of the Head (or Wife/"Wife") of this FU.

4. The Head (or Wife/"Wife") of the second other FU is the grandchild of the Head (or Wife/"Wife") of this FU.

44 0.2 5. The Head (or Wife/"Wife") of the second other FU is the sibling of the Head (or Wife/"Wife") of this FU.

7. Other

9,271 99.3 0. Inap.: no other panel family shares the household (V19016=0, 5, 7, or 9); only one other panel family shares the household (V20227=0000)

V20229 '_SIZE OF 2ND OTHER FU ' TLOC= 2290- 2291

Number of FU Members in Second Other FU

The range of possible values for this variable is at least 01, but not more than 20. The code value represents the actual number of persons in the second other FU. There are no missing data.

00. No other panel family shares the household (V19016=0, 5, 7 or 9); only one other panel family shares the household (V20227=0000)

V20230 '91ID OF 3RD OTR FU IN HU' TLOC= 2292- 2296
1991 Interview Number of the Third Other PSID Family Unit Sharing the Household with This Family

% nonzero = 0.1

Values for this variable in the range 00001-09363 represent the actual 1991 ID number of the third other family living with this one.

00000. No other panel family shares the household (V19016=0, 5, 7 or 9); only one or two other panel families share the household

V20231 'REL OF 3RD OTHER FU' TLOC= 2297

Relationship of the Head (or Wife/"Wife") of the Third Other Family Unit Sharing the Household to the Head (or Wife/"Wife") of This Family

1  0.0  1. The Head (or Wife/"Wife") of the third other FU is the parent of the Head (or Wife/"Wife") of this FU.

3  0.0  2. The Head (or Wife/"Wife") of the third other FU is the child of the Head (or Wife/"Wife") of this FU.

3  0.0  3. The Head (or Wife/"Wife") of the third other FU is the grandparent of the Head (or Wife/"Wife") of this FU.

4  0.0  4. The Head (or Wife/"Wife") of the third other FU is the grandchild of the Head (or Wife/"Wife") of this FU.

12 0.1  5. The Head (or Wife/"Wife") of the third other FU is the sibling of the Head (or Wife/"Wife") of this FU.

7  Other

9,347  99.9  0. Inap.: no other panel family shares the household (V19016=0, 5, 7 or 9); only one or two other panel families share the household (V20230=0000)

V20232 'SIZE OF 3RD OTHER FU' TLOC= 2298-2299

Number of FU Members in Third Other FU

The range of possible values for this variable is at least 01, but not more than 20. The code value represents the actual number of persons in the third other FU. There are no missing data.

00. No other panel family shares the household (V19016=0, 5, 7 or 9); only one or two other panel families share the household (V20230=0000)

V20233 '91ID OF 4TH OTR FU IN HU' TLOC= 2300-2304
1991 Interview Number of the Fourth Other PSID Family Unit Sharing the Household with This Family

% nonzero: no nonzero cases for 1991 data

Values for this variable in the range 00001-09363 represent the actual 1991 ID number of the fourth other family living with this one.

00000. No other panel family shares the household (V19016=0, 5, 7 or 9); only one through three other panel families share the household

V20234 'REL OF 4TH OTHER FU ' TLOC= 2305

Relationship of the Head (or Wife/"Wife") of the Fourth Other Family Unit Sharing the Household to the Head (or Wife/"Wife") of This Family

1. The Head (or Wife/"Wife") of the fourth other FU is the parent of the Head (or Wife/"Wife") of this FU.

2. The Head (or Wife/"Wife") of the fourth other FU is the child of the Head (or Wife/"Wife") of this FU.

3. The Head (or Wife/"Wife") of the fourth other FU is the grandparent of the Head (or Wife/"Wife") of this FU.

4. The Head (or Wife/"Wife") of the fourth other FU is the grandchild of the Head (or Wife/"Wife") of this FU.

5. The Head (or Wife/"Wife") of the fourth other FU is the sibling of the Head (or Wife/"Wife") of this FU.

7. Other

9,363 100.0 0. Inap.: no other panel family shares the household (V19016=0, 5, 7 or 9); only one through three other panel families share the household (V20233=0000)

V20235 'SIZE OF 4TH OTHER FU ' TLOC= 2306- 2307

Number of FU Members in Fourth Other FU

The range of possible values for this variable is at least 01, but not more than 20. The code value represents the actual number of persons in the fourth other FU. There are no missing data.

00. No other panel family shares the household (V19016=0, 5, 7 or 9); only one through three other panel families share the household (V20233=0000)

V20236 'HOUSEHOLD ID # ' TLOC= 2308- 2312
Household ID Number

This variable was generated to simplify the clustering of multiple panel family units residing in the same households. Its values were assigned simply by selecting a 1991 ID number (V19002) with the lowest value from among the 1991 ID numbers (V19002) of those families comprising each such household group. This value was used in these tape locations for all of the related households. Thus, if the user sorts the data ordered by this variable, the family units within larger household groups will be adjacent to each other. Family units who did not share their households with any other family unit or shared only with non-panel family units were given their own values for V19002. The range of values is 00001-09363, but the series is not contiguous. See Linking Data: Families Sharing Households in Section I, Part 5 in the front matter of this volume for a discussion of ways to identify shared households in the early years of the PSID.

NOTE: The information in V20237-V20240 is based on data gathered in birth history questions interspersed throughout Section J of the 1991 questionnaire. The birth data were asked for:

a) each male Head, unless all of the following were true: he was also Head in 1990, had the same legal Wife in both waves (V18918=1 and V20218=1 and V19010=0-1), and she was age 45 or older at the time of the 1991 interview.
b) each female Head, unless both of the following were true: she was Head, Wife, or "Wife" in 1990 and was age 45 or older at the time of the 1991 interview.
c) each Wife or "Wife", unless both of the following were true: she was Head, Wife, or "Wife" in 1990 and was age 45 or older at the time of the 1991 interview.
d) all other family unit members, including husbands of Head (V30691=90) and first-year cohabiters (V30691=88), who were age 12 through 44 at the time of the 1991 interview. All Heads and Wives/"Wives" were asked about births.

V20237 ' # BORN TO HD ONLY IN 90 ' TLOC= 2313 MD=9

Number of Children Born During Calendar Year 1990 to Head But Not Jointly with Wife/"Wife", Husband of Head, or First-Year Cohabitor

The values for this variable indicate the number of children born between January 1, 1990 and December 31, 1990 to the Head but not jointly with the Wife/"Wife", husband of Head, or first-year cohabitor (V30691=20, 22, 90 or 88 respectively), if one is present in the FU. The data are based only on information reported in the 1991 wave. Because of age and relationship variations in what was asked, this information is not known in some cases. See the note immediately preceding this variable for a description of the restrictions. If birth questions were asked about the Head but not the Wife/"Wife", husband of Head or first-year cohabitor, then births to Head were counted in this variable.
V20237  'BORN TO W/"W" ONLY IN90'  TLOC=  2314  MD=9

Number of Children Born During Calendar Year 1990 to Wife/"Wife", Husband of Head, or First-Year Cohabitor But Not Jointly with Head

The values for this variable indicate the number of children born between January 1, 1990 and December 31, 1990 to the Wife, "Wife", husband of Head, or first-year cohabitor (V30691=20, 22, 90 or 88 respectively) but not jointly with the Head. The data are based only on information reported in the 1991 wave. Because of age and relationship variations in what was asked, this information is not known in some cases. See the note immediately preceding V20237 for a description of the restrictions.

V20239  'BORN TO H+W JOINTLY IN90'  TLOC=  2315  MD=9

Number of Children Born During Calendar Year 1990 Jointly to Head and Wife/"Wife", Husband of Head, or First-Year Cohabitor

The values for this variable indicate the number of children born between January 1, 1990 and December 31, 1990 whose parents are Head and Wife/"Wife", husband of Head, or first-year cohabitor (V30691=20, 22, 90 or 88 respectively). The data are based only on information reported in the 1991 wave. Because of age and relationship variations in what was asked, this information is not known in some cases. See
the note immediately preceding V20237 for a description of the restrictions. If birth questions were asked about the Head but not the Wife/"Wife", husband of Head, or first-year cohabitor, then births to Head are counted in V20237. If birth questions were asked of the Wife/"Wife", husband of Head, or first-year cohabitor but not the Head, then births are counted in V20238.

5,487 68.0 9. No Wife/"Wife", husband of Head or first-year cohabitor was in the FU; Head, Wife/"Wife", husband of Head, or first-year cohabitor was not of an age-relationship combination about whom birth history questions were asked in 1991. See the note preceding V20237 for the age-relationship restrictions.

V20240  '# BORN TO OFUMS IN 90 '  TLOC= 2316  MD=9

Number of Children Born During Calendar Year 1990 to Other FU Members Age 12-44 Who Were Neither Husband of Head nor First-Year Cohabitor

The values for this variable indicate the number of children born between January 1, 1990 and December 31, 1990 to other FU members age 12-44 who were neither husband of Head nor first-year cohabitor (V30691=90 or 88 respectively). The data are based only on information reported in the 1991 wave. Because of age and relationship variations in what was asked, this information is not known in some cases. See the note immediately preceding V20237 for a description of the restrictions. A child reported as born to the husband of Head or first-year cohabitor is not counted in this variable. See V20238 for births to the husband or cohabitor if the Head was not reported as the other parent, or V20239 if the Head was reported as the other parent.

88  0.7  8. NA; DK

6,338 74.2 9. No other FU members were in the FU; any other FU members (besides husband of head and first-year cohabitor) were not between the ages of 12 and 44 in 1991.

V20241  'WTR PARENT HLTH SUPPL-HD'  TLOC= 2317

Whether Parent Health Supplement File Contains Information about Head's Parents--CORE SAMPLE ONLY
Each core sample 1991 Head or Wife/"Wife" who had at least one eligible parent was asked to respond to an extensive supplement about the parent's health (the 1991 Parent Health Supplement [PHS]), available as a separate dataset. This variable indicates whether a data record can be found for the 1991 Head on the supplemental data file. Refer to Section I, Part 8 for further information about the PHS.

1,810 27.6 1. The PHS contains a data record for head's parents.
68 0.9 5. At least one of head's parents was eligible for the PHS but no data record exists because of interviewer error, the respondent refused or wasn't able to answer the supplement, the interview was administered in Spanish, etc.

7,485 71.5 0. Inap.: neither parent was eligible for the PHS; Latino sample interview (V19321=7001-9043)

V20242 'WTR PARENT HLTH SUPPL-WF' TLOC= 2318
Whether Parent Health Supplement File Contains Information about Wife's/"Wife's" Parents--CORE SAMPLE ONLY

Each core sample 1991 Head or Wife/"Wife" who had at least one eligible parent was asked to respond to an extensive supplement about the parent's health (the 1991 Parent Health Supplement [PHS]), available as a separate dataset. This variable indicates whether a data record can be found for the 1991 Wife/"Wife" on the supplemental data file. Refer to Section I, Part 8 for further information about the PHS.

1,100 16.6 1. The PHS contains a data record for wife's/"wife's" parents.
32 0.3 5. At least one of wife's/"wife's" parents was eligible for the PHS but no data record exists because of interviewer error, the respondent refused or wasn't able to answer the supplement, the interview was administered in Spanish, etc.

8,231 83.2 0. Inap.: neither parent was eligible for the PHS; Latino sample interview (V19321=7001-9043); no wife/"wife" (V19351=00)

V20243 '1991 CORE FAMILY WEIGHT ' TLOC= 2319- 2324
1989 Core Sample Family Weight, Updated for 1991

This weight variable is to be used only for analysis of the core sample. If you wish to analyze both the core and Latino samples, then see V20245. If you wish to analyze only the Latino sample, then see V20244.

Note that a few core sample families have values of zero for this variable. These families were followed only for the elderly recontact effort, which included some nonsample individuals.
Weights for the core sample were completely revised in 1989 to account for deaths, marriages to nonsample persons, and differential non-response since 1968. See Section I, Part 5 of the 1989 and 1990 documentation volumes for further information. This 1991 weight has been updated for marriages, divorces, etc. since 1990.

OSIRIS USERS: Note that this variable is defined in the dictionary as having three decimal places.

000000. No sample individuals in this core family (includes nonsample elderly); Latino sample family (V19321=7001-9043)

V20244 '1991 LATINO FAM WEIGHT' TLOC= 2325-2330

1990 Latino Sample Family Weight, Updated for 1991

This weight variable is to be used only for analysis of the Latino sample. If you wish to analyze both the core and Latino samples, then see V20245. If you wish to analyze only the core sample, then see V20243.

Refer to Section I, Part 5 of the 1990 (wave XXIII) documentation for details about the Latino sample and weights. See Section I, Part 5 of this volume for information about updating of weights.

OSIRIS USERS: Note that this variable is defined in the dictionary as having three decimal places.

000000. Core sample family (V19321=0001-2930, 5001-6872)

V20245 '1991 COMBINED FAM WEIGHT' TLOC= 2331-2336

1991 Core-Latino Combined Family Weight

This weight variable is to be used only for combined analysis of the core and Latino samples. If you wish to analyze only the core sample, then see V20243. If you wish to analyze only the Latino sample, then see V20244.

Note that a few core sample families have values of zero for this variable. These families were followed only for the elderly recontact effort, which included some nonsample individuals.

Refer to Section I, Part 5 of this volume for details about the creation of the combined weight.

OSIRIS USERS: Note that this variable is defined in the dictionary as having three decimal places.

000000. No sample individuals in this core family (includes 1990 nonsample elderly)
Three variable indexes which attempt to organize the data for easy reference are included in this volume. Part 1 is a list of the 1991 family-level data in order by 1991 variable number, with comparable 1968-1990 variables included for each item. Next, Part 2 is an individual-level index similar in format to the family-level index just described. Please note that all individual-level variable numbers are valid only for files from Wave XXII (1989) onward. Part 3, the third index, compares questions from questionnaire Sections B and C (Head's employment), and Sections D and E (Wife's/"Wife's" employment) for user convenience. Complete indexes of all PSID variables from every wave are located in Volume III, are arranged alphabetically by content, and include tape locations and field widths for each variable.

Although all of these indexes have been checked and double-checked, the possibility exists that errors may still remain. Therefore, we cannot warn the user strongly enough to please use these only in conjunction with the tape codes.

Part 1: Numerical Index of Twenty-Four-Year Family-Level Data

This index lists the 1991 family-level variables in numerical order and includes comparable 1968-1990 variables. Note that both the 1976 and 1985 Heads' and Wives'/"Wives" interview data are listed in the 1976 and 1985 columns respectively.

Where blanks occur, no similar data item from earlier years exists for that particular 1991 variable. Data items not asked in 1991 are also not included. Thus, this index does not contain all the cross-year family-level variables. Small differences, such as coding formats or field width variations, have been annotated; the lower case alphabetic characters appearing directly beneath the variables to which they refer indicate footnoted differences. These footnotes are identical with those used for the alphabetical family-level index in Volume III. For convenience, a list of the footnotes is also located at the end of this index.

All variables listed herein should be comparable for analysis purposes with, perhaps, some recoding. Again, despite careful checking, errors may exist, and the user should consult the tape codes before doing analysis.

Please send information regarding errors to:

1The exceptions are the employment-related variables that were coded only once for all Heads (1968 and 1969 data) or all Wives/"Wives" (1968-1975, 1977 and 1978 data) regardless of employment status. These are listed with the appropriate 1991 variables from the sections asked about employed Heads and Wives/"Wives", but not with the questions for unemployed Heads and Wives/"Wives".

* Skips in numerical sequence are due to dummy variables separating each year's data.

** These variables are described but not listed individually in this index.
THE FAMILY NUMERICAL INDEX IS AVAILABLE AS AN ADDITIONAL FILE IN THIS GROUP OF TEXT FILES.
The 1991 individual-level variables are listed in numerical order, with the comparable 1968-1990 variables included. Where blanks occur, no similar data item exists in previous years for that particular 1991 variable. Also, some data items from previous years are excluded from this index since no comparable variable exists for 1991. Thus, this index does not include all the cross-year individual-level variables. The alphabetical index of the individual-level variables (Part 2, Appendix 1, in Volume III of this 1991 Documentation), includes all such variables. There are some differences between years in field width and coding format among the variables listed here, which have been annotated. The lower case alphabetic characters indicating such differences appear directly below the variables to which they refer. A list of the footnotes appears at the end of this index.

These variable number ranges changed beginning with the 1968-1989 cross-year files, as sex of individual was at that time removed from each year's individual data and is now included with the summary variables (V32000). The introduction to the individual-level tape code on pp. 434-455 of Volume I of the wave XII (1989) Documentation lists the old 1968-1988 variable numbers with their corresponding new 1968-1989 variable numbers.

Beginning with Wave XXIII (1990), tape locations for individual-level data remain constant across later releases with the exception of the summary variables. If you are using tape locations, you may use this index not only for the 1968-1990 and 1968-1991 cross-year files--with the caveat about the summary variables--but also for any newer files into the indefinite future.

Below are the ranges for each year's individual portion of the data on the twenty-four-year cross-year tape.

Note that the summary variables (V31994-V32049) are listed in the column for 1991, although these variables have been generated using data from other years, as well. It is simply more convenient to list them in this fashion.
V30001-V30019  1968 individual data
V30020-V30042  1969 individual data
V30043-V30066  1970 individual data
V30067-V30090  1971 individual data
V30091-V30116  1972 individual data
V30117-V30137  1973 individual data
V30138-V30159  1974 individual data
V30160-V30187  1975 individual data
V30188-V30216  1976 individual data
V30217-V30245  1977 individual data
V30246-V30282  1978 individual data
V30283-V30312  1979 individual data
V30313-V30342  1980 individual data
V30343-V30372  1981 individual data
V30373-V30398  1982 individual data
V30399-V30428  1983 individual data
V30429-V30462  1984 individual data
V30463-V30497  1985 individual data
V30498-V30534  1986 individual data
V30535-V30569  1987 individual data
V30570-V30605  1988 individual data
V30606-V30641  1989 individual data
V30642-V30688  1990 individual data
V30689-V30732  1991 individual data
V31994-V32049  Summary variables
THE INDIVIDUAL NUMERICAL INDEX IS AVAILABLE AS AN ADDITIONAL FILE IN THIS GROUP OF TEXT FILES.
This index compares all the variables from the employment sections for Heads (B & C) and Wives/"Wives" (D & E); if there is a Wife/"Wife" in the Family Unit, V19694=1. The section asked is based on employment status (V19393-V19395 for Heads, V19695-V19697 for Wives/"Wives").

Many of these variables represent the same or similar questions asked in both sections. In analysis it might be desirable, for instance, to look at weeks worked in 1990 for all Heads regardless of whether they are currently employed or not. With the tabulations in this index, the user can tell at a glance whether or not the same question was asked of all Heads. Using the example given above, one could generate a new variable on weeks worked in 1990 simply by adding V19496 + V19643, since one and only one of these variables contains this information for each Head; the other contains zeroes, indicating that the question is inappropriate.
1991 Comparative Index for Employment Sections B & D

APPENDIX 1: ALPHABETIC INDEXES

These indexes have been separated from the documentation volume and included in the PSID User Guide for the past few years. For user convenience, and in order to free the alphabetical indexes from the User Guide and updates, we have decided to also include them as Volume III of the annual documentation. However, all persons ordering the User Guide will receive this Volume III of the 1991 Documentation along with the Guide. We have retained the User Guide format: unbound and three-hole paper for easy reference.

Two variable indexes that attempt to organize the data are included in this volume. The first is a topical alphabetic arrangement of family-level data only, with the pertinent variables listed. This index includes all family-level variables for the entire twenty-four year data collection effort, even though each year's family-level information is now stored on its own separate data file. The second is an alphabetic index similar to the first one, but incorporating only the individual-level variables from the twenty-four year tape. Please note that these individual-level variable numbers are valid only for the Wave XXII (1989) and subsequent tapes. Refer to the introduction on pp. 434-455 of Volume I of the Wave XXII (1989) Documentation for changes in individual-level variable numbers between the 1968-1988 and 1968-1989 and later cross-year tapes.

Although both of the indexes in this volume have been checked and double-checked, the possibility remains that errors may still exist. Therefore, we cannot warn the user strongly enough to please use these only in conjunction with the tape codes.

The indexes were reformatted beginning in 1989. Due to limitations in paper width, we were forced to use two sets of lines for each data item. The first set of variable numbers, for 1968-1976, is printed in bold type, but the second set, for 1977-1991, is not. Each set lists the variable numbers with tape locations in italics directly below each variable number, followed by field widths on the third line. Comparability annotations in the form of lower-case alphabetic characters follow on line four, where applicable. The comparability codes are identical to those for the numerical indexes in Section III, Volume II, but are reproduced here for user convenience.

Although we have spent much more time on these indexes than is prudent for sound mental health, errors remain. Since this index is used as the basis for all future versions of the documentation volumes, we would appreciate information on such errors. Please send information about them to:

Part 1: Alphabetical Index of Twenty-Four Year Family-Level Data

Since this index is a compilation of all variables on the family-level files for 1968 through 1991 interviewing years, no individual-level variable numbers are included. However, cross references for those variables are listed at the appropriate content headings. All raw data and generated variables are listed in alphabetical order by topic. Each alphabetic entry is accompanied by a list of variable numbers, tape locations, and field widths showing when and where comparable data exist for each of the years of the study. Small changes in questions posed or in coding conventions for a given question are noted in footnotes to the variables. The list of footnotes for family-level data is located at the end of this index.

Headings may have more than one variable number listed for a given year. This generally indicates that the same question was asked of different subgroups within the sample (employed and unemployed respondents, for example). The "O. Inap.;..." code in Section II, Part 1 (Family Tape Code), of Volume I for each year for each of these variables contains details on which subgroups have no data on such variables. When in doubt, always refer to the questionnaire or editing worksheets, annotated with variable numbers, in Section I, Part 2 or Part 3 of the appropriate year's documentation. Note that such terms as "head" or "wife" do not necessarily designate the same person in the data from wave to wave.

THE FAMILY ALPHABETICAL INDEX IS AVAILABLE AS AN ADDITIONAL FILE IN THIS GROUP OF TEXT FILES.
Family-level variables are associated with interviewing years as follows:

Variables 1-439 . . . 1968 family data

Variables 441-909 . . . 1969 family data that precede change variables (includes raw data and most generated variables)

Variables 910-989 . . . 1968-69 change variables**

Variables 990-998, 1008-1016 . . . . 1969 family data that follow change variables (includes deciles and a few other variables)

Variables 999-1007 . . . calculated in 1969 for responding 1969 families only. Values are for their 1968 data.

Variables 1101-1624, 1766-1767 . . . 1970 family data

Variables 1625-1627 . . . 1969 labor market data, based on 1970 sample; i.e., gathered in 1970 for responding 1970 families, but values are for their 1969 data

Variables 1801-2346 . . . 1971 family data

Variables 2401-2980 . . . 1972 family data

Variables 3001-3311 . . . 1973 family data

Variables 3401-3731, 1764-1765 . . . . 1974 family data

Variables 3801-4232 . . . 1975 family data

Variables 4301-4707 . . . 1976 Head's interview data

Variables 4708-5027 . . . 1976 Wife's interview data

Variables 5028-5114 . . . 1976 other family data
Variables 5201-5671, 5681-5682 . . . . .
1977 family data

Variables 5672-5680
Change in marital status variables, based on 1977 sample; i.e., their 1968-1976 data calculated in 1977 for responding 1977 families but values are for their 1968-1976 data.

Variables 5701-6221
1978 family data

Variables 6301-6815
1979 family data

Variables 6901-7457
1980 family data

Variables 7501-8111
1981 family data

Variables 8201-8739
1982 family data

Variables 8801-9433
1983 family data

Variables 10001-11079
1984 family data

Variables 11101-12446
1985 family data

Variables 12501-13687
1986 family data

Variables 13701-14737
1987 family data

Variables 14801-16208
1988 family data

Variables 16301-17612
1989 family data

Variables 17701-18945
1990 family data

Variables 19001-20245
1991 family data

* Skips in numerical sequence are due to dummy variables separating each year's data.

** These variables are described but not listed individually in this index.
Part 2: Alphabetical Index of Twenty-Four Year Individual-Level Data

This index lists each individual-level variable by topic, and is modeled after the alphabetical family-level data index (Part 1 of this appendix). The headings are the same as those listed in the family-level index under INDIVIDUAL DATA. Below are the ranges for each year's individual portion of the data on the twenty-four year cross-year tape.

V30001-V30019  1968 individual data
V30020-V30042  1969 individual data
V30043-V30066  1970 individual data
V30067-V30090  1971 individual data
V30091-V30116  1972 individual data
V30117-V30137  1973 individual data
V30138-V30159  1974 individual data
V30160-V30187  1975 individual data
V30188-V30216  1976 individual data
V30217-V30245  1977 individual data
V30246-V30282  1978 individual data
V30283-V30312  1979 individual data
V30313-V30342  1980 individual data
V30343-V30372  1981 individual data
V30373-V30398  1982 individual data
V30399-V30428  1983 individual data
V30429-V30462  1984 individual data
V30463-V30497  1985 individual data
V30498-V30534  1986 individual data
V30535-V30569  1987 individual data
V30570-V30605  1988 individual data
V30606-V30641  1989 individual data
V30642-V30688  1990 individual data
V30689-V30732  1991 individual data
V31994-V32049  Summary variables

These variable number ranges changed beginning with the 1968-1989 cross-year tape, as sex of individual was removed from each year's individual data and is now included with the summary variables (V32000). The introduction to the individual-level tape code on pp. 434-455 of Volume I of the Wave XXII (1989) Documentation lists the old 1968-1988 variable numbers with their corresponding new 1968-1989 variable numbers.

Beginning with Wave XXIII (1990), tape locations for individual-level data will remain constant, with the exception of the summary variables. If you are using tape locations, you may use this index not only for the 1968-1990 and 1968-1991 cross-year files but also for any newer files--again with the caveat about the summary variables--into the indefinite future.

In the following index, the summary variables have been listed in the column for the most recent year's data, even though they are generated using information from all of the years.
THE INDIVIDUAL ALPHABETICAL INDEX IS AVAILABLE AS AN ADDITIONAL FILE IN THIS GROUP OF TEXT FILES.
